Take the radio apart and wash the case with 409 cleaner and
a tooth brush.. Rinse off good and dry. As for the manual,
you can try putting the manual into a large plastic bag with
some charcoal brickets from your grill. Put them in the
freezer for about a week.

2. TS-940SAT question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-01 00:00:00 UTC
From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <38BD70B7.90D9848@yahoo.com>
Source record: 84497

Hi,
A friend has a TS-940SAT for sale. Price is very good, but radio has one problem. Not sure if it is serious impending failure, or something easy like needs new lithium battery.

Rig is on and works fine. All of a sudden, the frequency display will flash on and off...and then go dark completely with the rig making a beep beep noise. Turning power of the
rig off and back on will restore the frequency display and rig works normally again. Seems to be time-sensitive....if rig is on for 15 minutes, it does it. Then, after one on/off cycle, rig is good again for several HOURS. First time this happened, the rig needed a cold reset (A/B button plus power). Has not needed a cold reset since, though
it does need to be cycled off and back on when the display goes dark.

Is this a common problem when battery is low or something more serious?

thanks,
Joe

3. Re: Cw Ops Opinion

Newsgroup: rec.radio.amateur.equipment

Source record: 84498

Dick,
I'm almost all CW, and prefer QRQ above 40 WPM. I believe the only rig that is any good for full break in CW sending (QSK) and excellent AGC and filter performance receiving is the Ten Tec Omni 6 plus. It is a very modern rig with DSP capabilities and excellent customer service. A second choice for less expensive but very very good performance is the Ten Tec Corsair 2.

For bargain basement prices, the Kenwood TS930S is hard to beat as an inexpensive CW rig. The TS-940S is also good...though I prefer a very late serial number 930 to it.

Fact is, the JA rigs are all OK on CW. If you are a perfectionist, I would say US made Ten Tec is still the winner on all around CW performance.

Hi, would appreciate if anyone could e-mail me a operational codeplug for a Motorola Saber "R" twelve channel secure radio, factory ID # H44QXN7139CN, or an alternate one if you think it will get my radio back on it's feet.

I made the mistake of trying to write to the radio with a Pentium class computer (without MoSlo) and scrambled the poor thing......don't make the same mistake with your Saber!!!

My thanks in advance for any help you may be able to provide......Joe D.

As I recall a while back, someone mentioned, that by using those little pieces of paper, that people place in a dryer while drying their clothes worked for them getting the smoke stink out of old receivers, I guess those paper deal absorb the odor, and give off a more pleasant smell them selves. for the life of me I cant recall what those tissue like papers are called...good luck 73

David,

Yes, China Radio International does broadcast in English. Try their web site at: http://www.cri.com.cn/english/

My radio is dead, and I haven't heard them for a while, but I know they have an hour aimed at the west coast each evening.

Terry

Dont let these anti-radio-shack folks lead you astray. I own several Radio Shack/Sangean Radios and enjoy them every last bit! They are good Radios. I own several of these fine radios.

And, if you need a good active antenna to go with that Radio Shack Radio, goto the DWM Webpage on my sig file, you'll find several cool antennas that will fit in your budget.

9. FA: ICOM IC-T81A (N.I.B.)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-01 00:00:00 UTC
From: Gil Restiaux <restiaux@sprint.ca>
Message-ID: <38BDBFCD.EE8C7B35@sprint.ca>
Source record: 84504

ICOM IC-T81A

NEW IN THE BOX

IC-T81A

-6 Meter/2 Meter/440 MHz/1.2 GHz

-Worlds First Quad Band HT.

-The IC-T81A is water resistant to JIS 4 standards

-Add the wide-open microwaves to your fun. The 1.2 GHz band is very popular in metro
areas.

Compact size: 2.3 (W), 4.2 (H), 1.1 (D), 9.9 oz
Transmit on 6 meters, 2 meters, 440 MHz, and 1.2 GHz ham bands
Up to 5 watts of power @13.5 V DC (1 watt on 1.2 GHz)
4.5 watts out of the box with supplied BP-200 battery

-Wide band receive:
50-54 MHz (6 meters), 74 - 174 MHz (2 meters), 400 - 470 MHz (440 MHz band) and
1240 - 1300 MHz
(1.2 GHz band)
Broadcast FM receive (some TV stations, too)
Airband receive
Reception guaranteed on US ham bands only

-Ni-MH powered:
Longer operating times than with Ni-Cd cells
Compact size keeps the weight down, and provides slim profile
Back mounting offers good radio balance -- feels comfortable in the

hand

-Excellent audio output:
Broadcast FM and AM receive (most TV stations, too)
Airband receive
Reception guaranteed on US ham bands only

-RIT/XIT (/VXO) for 1.2 GHz:
Tunable range of ï¿½5 kHz in 1 kHz steps

-Multi-function "joystick" switch:
change bands
cruise menu options

set modes

-Rugged ICOM construction:
Die-cast aluminum chassis
JIS grade 4 water resistance

124 memory channels with 10 scan edges and 1 call for each band
Tone squelch (CTCSS encode) with pocket beep
Tone scan (CTCSS Decode)
DTMF encoder, 9 memories
Backlit display with timer
Battery voltage indicator
Built in guide function
Wall charger included

FS: I have several ORIGINAL service manuals that are very hard to find. They are as follows: Collins 231D Transmitter, 3000 Watt Output Radiotelephone, heavy manual with all diagrams, a thick manual, $95; Collins 75A-2 Instruction/service manual, $75; RF Harris RF-230/RF-230M Programmable HF-SSB tranceiver service manual, very thick, $95; All manuals are in very good condition and not torn up with nice original top covers. If interested call Mike at (409) 693-1461 or e-mail.

15. Need help with Power problems

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-01 00:00:00 UTC
From: Tim Goldenburg <tim@moneystar.com>
Message-ID: <89kjse$9d0$1@news.jump.net>
Source record: 84510

I'm a newbie to amateur radio and have been having some power problems. I thought someone on this newsgroup might be able to answer my questions.

I have a Kenwood TM-D700A and a Samlex America SEC 1223 regulated DC power supply (both were sold to me by a local shop in Austin, TX).

Power supply specs are as follows
Input voltage range - 100-130 VAC 50/60Hz
Output Voltage - 13.8 VDC
Output Current (Continuous) - 23 Amps
Current Limiting - 25 Amps
Short Circuit Protection - Yes
Fuse Rating - 6.3 Amps

I have it plugged into a standard wall outlet in my home (which is 15 amps, right?). How is a 23 amp power supply supposed to work on a 15 amp circuit? Everything works fine if I am listening, but if I transmit on low power (5 watts on the D700A), the power supply has a low buzz. If I transmit on medium or high power, the power supply goes nuts and buzzes very loud. I have 2 computers in the same room turned on, and a monitor. I also have a computer turned on in an adjecent room. One or both of the monitors will flicker out when I transmit. I know I have 2 different circuits to the rooms because I've tested which circuit breakers go to what rooms. I've also tried turning 1 of the 2 computers in my room off as well as the monitor. I still see the same problem. In all instances, the air conditioning has been off (so it isn't drawing anything) What is my problem? Is it a bad power supply? Too little current? Thanks.

Put both names on the money (ie, Joe Blow OR Tom Doe), and you shoud not
have any
problems with the bank.

>73s, Jim (AA2QA)

I certainly agree. I can see the code issue from both sides now. I was an active HF cw'er from the late '60s through the early '80s when I let my Advanced ticket lapse. Just 3 weeks ago, I went in and retested, passing my 5wpm and my Novice, Tech and General tests. I did have to drill for 10 days on code, review some of the newer RF regs, and read up a bit on packet, which was after my time, but otherwise didn't have to study because I already had a good grounding in the subjects. Now I'm trying to get my code up to 13 in time to take the 1B test before April 15th and get a "code" General - just for old times' sake. If I don't make it in time, I'll be one of these "welfare" Generals everyone is complaining about. I'll still get my code back up to my old speeds before much longer and it won't matter very much to me that I didn't have to pass the 13wpm test to get back on the HF bands. I'll let my fist speak for me <g>.

As long as I can remember, the older hams have been complaining that the newer generation weren't real hams for one reason or other. When I started out, older guys used to complain that you weren't a REAL ham unless you homebrewed everything from rigs to antennas (and I'm not talking Heathkits here). My original Elmer (an older neighbor who helped me build my first rig) thought I was selling out when I bought my TS-520s. Just an appliance operator - no better than a CB'er. Later, when I switched over to an iambic keyer (my Elmer gave me an old navy straight key when I passed my Novice test) I heard the old guys complain that you weren't a REAL ham if you didn't use a straight key. Still later, when they went to multiple-choice questions on the code test, I again heard the old guys complain that it had gotten too easy.

To get a CB "license" (there actually isn't any CB license anymore) you have to buy a CB radio.

To get an Amateur license that includes HF privileges today (at least a Tech Plus), you have pass a test showing that you know FCC rules, standard operating procedures, radio wave propogation theory, electrical principles, radio circuit components, practical circuits, antenna and feedline theory, RF safety, and, Oh Yes, CW. To upgrade to General - the first really usable grade on HF - you have to show more comprehensive knowledge in all of these subjects and more, and, Oh Yes, faster CW.

So now we've removed the higher CW requirement - but we've still kept the requirements for the rest of the body of knowledge. This will NOT turn HF into CB - any CB'ers who want to come over must still pass the same tests the rest of us do, less only the 13 or 20wpm CW tests. To get to the post-restructuring General requires that you at least learn CW (albeit at a slower speed) and also know the same written material that has always been required. Hysteria aside, this isn't really all that much of a change.

Anyway, listening to the all-too-prevalent lids and idiots I hear on HF these days (particularly on 20 meters lately - where you need at least 13wpm to operate), I don't see how a bunch of CB'ers can be all that much worse <grin>.

Has anyone seen the Spectrum Electronics Company lately? Do they still exist?? Do they have a website??

I want to buy a Two Meter repeater....

Or do you know of one for sale???? Please respond direct at the address below...

Thanks....

It seems like I ran across a web site where you could enter a model of radio gear and get back a brief description. This would really help on rec.radio.swap to be able to look up a model that was unfamiliar. If anyone knows of such a site It would probably be of interest to all.
Thanks and 73

No gimmicks, no strings attached at
http://va3wm.haybay.net

This is a free Swap Shop for ham radio operators and SWLs alike.

The more exposure you have for whatever it is that you want to sell or buy the quicker you will realize your expectations. Using newsgroups to buy or sell ham radio equipment is great, but so too is using Free Photo Classified Ad sites like http://va3wm.haybay.net .

I am John Herzog VE3DOP and I run the Swap Shop as a major part of my participation in our wonderful mutual hobby.
The classified ads program that IS the Swap Shop is fully automated and runs in real time. Just as soon as you have placed a free ad it appears online. If you wish to include a picture that you have you may upload it for free and it will appear immediately. No bills, no invoices, no nags, just quality FREE advertising.

Does that appeal to you?

TIP:
If you have a number of items to sell or that you want to buy DON'T lump them all together in one big ad. Split them up into several ads. That way you get to write more eye-catching headlines, and the one item you're selling that someone else is looking for won't get lost.

Classified advertising on http://va3wm.haybay.net is free. Get the most out of your advertising dollar that you can. Maximize your exposure, minimize you time. Succeed quickly, use plenty of ads, they're free!

At http://va3wm.haybay.net/
Whenever you want to place an ad you can. The Swap Shop is open 24-7-365.
Whenever you want to delete your ad prior to its automatic expiry date you can do so.
Whenever you want to edit your ad you can do so.
Whenever you want to update your picture you can do so.
Follow this URL http://va3wm.haybay.net/ for the best in classified advertising for ham radio operators.

If you want automatic notification of new ads for items you're interested in then this is the Swap Shop for you.

If you want a SAFE place to use your real e-mail address without fear of spammers harvesting it then this is the Swap Shop for you.
http://va3wm.haybay.net uses a reply system that hides your e-mail address. The only way your e-mail address could possibly be shown in any ad you place

would be if you were to use it somewhere on the fill-out form where it doesn't belong or if you were to include it in the body text of your ad.

If you want to include a hypertext link to your own web site along with your ad then this is the Swap Shop for you.

If you want to increase the exposure for you item(s) then this is the Swap Shop for you.

Don't hesitate any longer follow this URL now. http://va3wm.haybay.net

****
Do I have some sort of revenue producing angle connected to this web site? Frankly, yes!

CAVEAT---
If you're in the BUSINESS of buying and selling new or used ham radio equipment or services then this is the Swap Shop for you IF you're willing to pay a LOW PRICE for your advertising. Classified ads that are obviously from commercial interests will be deleted in the most Draconian manner UNLESS prior arrangements have been made. To find a 'real' e-mail address for me visit the site http://va3wm.haybay.net or remove the X from SwapShopAdvertising@Xhaybay.net

For the past couple of years this web site has been strictly a hobby enterprise for me. To date I have not made dime one from it. Excluding any value that my own time might have, in terms of hard cash I have well over one thousand US dollars sunk into this site. My objective is not so much to recover that investment, but rather to have the site pay its own way from here on in.

How? By selling banner advertising space.

I make part of my living by promoting other peoples' web sites That is very time-consuming work. And just like the auto mechanic who drives a wreck I have not been paying the attention to http://va3wm.haybay.net that I should have. High time for a change. It is now my purpose to make this web site so popular that advertisers would be foolish not to advertise on it.

The relationship between a popular web site and the people who use it is symbiotic in the extreme. This is especially true in a situation as exists with http://va3wm.haybay.net . The more people there are who list ads on it the more likely it is that those ads will sell quickly. The more people who visit this web site OFTEN the more attractive it becomes for banner advertisers, especially those who are targeting ham radio operators. An advertiser using banner ads that he or she KNOWS are being seen by their target demographic group is a HAPPY advertiser. The busier this web site is the more likely it is that its owner won't go broke floating it. Symbiotic, everyone wins.

Thank you very much for reading this far. Now, please go to the site and list something or buy something.

Yeah, but you did get your money!

With an unscrupulous person the buyer may never get the item. Unfortunate,
but a fact of life these days.

I have for sale a Mirage B3516 2 Meter amp. 35 Watts in gives 160 out, 10 in give about 100. Great for Satelite radios. Nice shape, but not origianal manual, I have a copy of the B1016 Manual, which is identical except 10 in & 160 out.

Asking $225 OBO
Thank You,
Joe N6YYO

Dick ....Welcome back to Amateur Radio! I operate
about 90% CW with an older TS-440/SAT which seems to
keep up with the high speed okay (30-40 w.p.m.) but seems
to lack on the CW tone for monitoring. The QRI has been
very good from the stand point of others telling me.

What ever you decide to get I would recommend adding
a good CW band pass filter (250 - 500 Hz). The days of
grid-block keying are over.

If you have a receiver now, tune it to the 30 M band
which is CW only (10.100 - 10.150) mHz and listen to
the various rigs. Perhaps this will help with a choice.

Only an idiot would send equipment to a stranger without payment in advance.
COD is not a bad way to go...but the buyer will pay all COD charges up
front. I believe in both buyer and seller beware.

While Morse has it's place (I won't deny that)
some of us believe that MANDATORY Morse is an anachronism.

There is no need for the artificial 30MHz barrier.

Does anyone else find it so ironic that this sentiment comes to
me
over the internet? I assume he built his own PC, wrote his own
Operating System etc.
Maybe we should force people to pass an exam about TCP/IP before
allowing them onto the Internet? That would solve a problem or
two, LOL

Try this to see what normal people might think...

Hello All:

I have an Alinco DX-70TH that I no longer need. The radio is in "near perfect" shape. This radio has not been mobile, however, it was remote mounted in my "shack". It does come with the remote separation kit (6' version) and an MFJ TNC/Microphone switch.

I have replaced the unit with a Icom 746 and I have another DX-70TH in my vehicle, so I no long need this one.

I am asking $580 plus shipping from 20637.

Please e-mail directly.

Thank you,

Cliff Owen

Well, I HAVE built my own PC. And I've written my own BIOS. And even a mini-OS. So I guess that means I can say anything I want over the internet, right?

And I HAVE built my own radios, and I will hopefully have a new HF rig (Elecraft K2) in the next week or so to work on. And do CW. Because I want to get my CW skills back, and because CW is fun, especially QRP and camping.

But I see no reason to make it mandatory either, other than that one single clause in the treaty... But that will go, eventually.

Mike

Source record: 84625

Icom 781 HF rig with built in tuner,built in scope,built in power
supply. 150Watts, Does full
power, I put it on a dummy load and it puts out 150 Watts. Comes
with Manual,Power Cord.
No original box and no mic comes with it. This rig works 100
percent
and the scope is nice and bright. The metal cabinet that goes around
it has a few touch ups on it.
The serial number is: 01779 As I stated, everything works
GREAT. Of course this would be double boxed
and packed well.

WAS: 2,675.00 NOW: 2,500.00 FIRM
Or trade for GM300 VHF and UHF Mobiles
of equal value or Spectra Mobiles VHF and UHF. Ham Gear,
Also looking for Collins Gear. Just let me know what you have.
Reply Email.
Thanks for reading,Rich.

Source record: 84631
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave

I am looking for a decent, relatively inexpensive (under $200 or less) way to start listening to international broadcasts -- Deutsche Welle, Radio France, the Dutch, etc., primarily for the sake of hearing the languages again on a regular basis. (And for a different point of view, too. Do the Chinese do shortwave in English, like Radio Moscow or Radio Liberty or RFE used to do?)

I gather that the cheaper Radio Shack products should be avoided, and that Grundig YachtBoys and cheaper Sonys are better choices, depending on exactly what one wants to do. Given that I am not really looking for searching out weak broadcasts to DX, and that I am in Portland, Oregon, can someone tell me if this is even possible? I have had one or two folks tell me that the Northwest is a lousy place for reception. Can this be so bad that I am wasting my money on a cheaper set?

Finally, any good ideas about whom to buy from?

many thanks,

dave loewi

I recently purchased an HT over the net and I neglected to ask the seller if he is a smoker. (I can't believe it either.)

The HT is in excellent shape, except for the smell. The users manual smells even stronger. They even stink up the room they happen to be in.

Can anyone give me some advice on how to "get the smell out" of an HT and the associated paperwork?

[Requirement: The HT needs to work once the smell is gone. I need to be able to read the manual once the smell is gone.]

Thanks!

Rick

I have a Bird Model 43 watt meter with UHF connectors, serial number #79197, as well as 7 plug-in elements for sale as a package.

The condition of the meter and elements is about a 9. The meter case has a couple of very small nicks in the paint about 1/16" wide and long, which do not go
through to the metal of the case. The meter movement and coupling module look like new.

The elements are all in great shape, still nice and shiny, and are as follows:

#100H - 100 watts 2-30 mhz.
#1000H - 1000 watts 2-30 mhz.
#25C - 25 watts 100-250 mhz.
#250C - 250 watts 100-250 mhz.
#25D - 25 watts 200-500 mhz.
#100D - 100 watts 200-500 mhz.
#250E - 250 watts 400-1000 mhz.

Price for this package new from HRO is $815.60. My price is $450.00 shipped anywhere in the lower 48 (CONUS). Payment to be by U.S. Postal Money Order or Cashier's Check drawn on a major bank. Sorry, No COD's.

I can e-mail pictures of these item to any serious buyer upon request.

Thanks for reading and 73,

Dan K Nelson - W6DKN

also, go to your bookstore and buy the year 2000 edition of Passport to World Band Radio. It is a great book to get started with, and includes the english language schedules for all the countries. China does have an english servidce, as does taiwan. This book will tell you not only the english language schedules, but also reviews on radio equipment, station addresses, the foreign language schedules, and an index for finding out exactly what you are listening to on any given frequency. i hope this helps, thanks

by the way, i got started 15 years ago on an old zenith trans-oceanic that my grandfather gave me before i died. It dosent work now, so I only use my Sangean ats-909

Yes there are Millions of "idiots" out there happily buying and
selling pre-paid via U.S. Mail and UPS etc.

C.O.D. has an inherent risk! The guy swho ends you a couple of BRICKS!

It happens more among CB'ers from what I am told.

You can't tell what's in the box until AFTER the UPS guy leaves!
Then it is too late. You have already paid.

There is ALWAYS some measure of risk on the part of buyers and sellers
both.

The best thing is to KNOW YOUR buyer or seller! (as much as possible!)

Rip-offs are rare (as was detailed by one poster on some of the
newsgroups recently)

I wonder why you copied this to SO many newsgroups?

Have you been a victim of a pre-paid scam? I bet less than 0.0001% of
radio trades fail that way.

Your analysis is essentially correct regarding the brands of radios. I, too, live in Portland, OR and it is imperative you have a receiver with good weak signal sensitivity. I have never owned a Radio Shack or Sangean, although I have used a friend's Sangean whose weak signal sensitivity was sadly lacking, but I do own the Grundig YB-305, YB-400 and YB-500 as well as the Sony 2010 and 7600G. For pure audio, the YB-400 wins hands down but the weak signal sensitivity is better on the 2010 and 7600G IMHO. If you are keeping your cost below $200 I think it boils down to either the YB-400 or 7600G - both excellent portables. If you go up to $350, the Sony 2010 is the best, again IMHO.

Ham Radio Outlet (HRO) in Tigard has both Sony and Grundigs usually in stock and at about the same price as you would pay at mail order stores already mentioned but without the shipping costs. They also seem to be pretty reasonable about returns, too.

I have found eBay to be a good source of used radios. The Grundig YB-400 are listed pretty frequently so the price is reasonable; the Sony 2010 is also listed regularly, less so the 7600G.

Have fun.

Hello:

I am looking for old transformer cores, silicon steel type, from circa 1930-1950. The silicon steel must not be the uniform grain structure as used in modern transformers, but be the type that looks like small particles of metal were 'pressed' together, giving it a grainy, almost crystalline structure. This signifies that the material is not very pure, and is nonlinear in magnetization. That is the type I need. If you have anything like this, and are willing to sell it, email me.

Thanks,
--Kyle R. Mcallister

Put a post over on rec.radio.cb about needing the manual. I did that and got two different copies (one in .pdf and one a scanned mess) in a matter of hours. A lot of CB'ers use this radio because it so modifiable. There's on mod where if you hit the lock key, the CB channels will be displayed numerically.. There's a lot of mods for this radio, just decide which ones you want to deal with. Most involve just moving a simple jumper.. No soldering or anything like that.. I think my 2950 tunes from 26.000.00 thru 32.000.00... That's all variable depending on what mod you do.. Mine was like this when I got it so I haven't messed with it much.

It's a great little radio, I'm really impressed.. Once I got mine, my htx-100 immediately went on the market for sale. As for the channel know, don't know what to say there.. I usually just use the arrow keys..

Have fun,

Matthew,

You've started quite a conversation here and most of it looks very informative. One of the first replies talked about getting your no-code tech license from your local amateur radio club and that's very sound advice. As well is the advice on the 2 meter mobile you were interested in. I own one HTX-242 and also it's earlier version the HTX-212. Both are fine radios.

Also mentioned earlier were repeaters and a great discussion followed. I don't know if anyone took the time to explain what a repeater is but basically, it's one of these building top or mountain top locations that has a radio that recieves your signal and repeats it using a better antenna than your mobile and also a lot more wattage usually. They are mostly run on duplex which means your radio transmits on one frequency and recieves on another.. You don't have to worry about all that once you put the frequencies into memory.. It's all fairly easy and is explained in the manuals from Radio Shack.

I myself have worked a repeater from 65 miles away with my 5 watt handheld plugged into a simple magnetic mount antenna on the roof of my truck. Now let me give a little more info on that repeater I worked. It's part of the repeater network here in interior Alaska that covers over 60,000 square miles. Most of that area is primarily occupied by Moose and Bears but, it's nice to know that if you happen to ride out there on a snowmachine or 4 wheeler, you can always get help if you need it. Here's an address you can look at to see what kind of coverage a really good repeater network has.

http://www.admin.uaf.edu/aarc/AARCrptmap.html

Most of our repeaters are linked together so that I've been able to talk over 300 miles with just my mobile radio and a magnetic mount antenna. It all depends on your local club and the cooperation they might have with other clubs. The network we currently have is sponsored primarily from our club with some help from our parent club in Anchorage.

Another nice feature with a lot of repeaters is the ability to do what is called an autopatch. This allows you to make non-business related calls thru your radio and the repeater. Great for telling your friend to turn on his radio or to call the missus and see if she needs you to get eggs or to call a tow truck when you're stuck.

Well, hopefully I was able to shed a little light on this subject and not totally confuse you. If you have any questions, don't hesitate to ask.

As many other posters have said, most modern
transceivers have very good keying characteristics.

Since you've been out of the hobby for a while, I think
you might be suprised at how complicated the new
rigs have become. They have so many features
that it can be overwhelming.
Be sure to try before you buy.

>
>etc etc

Hello Dick,

Most "modern" rigs perform OK on CW. But most are primarily SSB rigs with CW tacked on. A few stand out from the crowd, and are not necessarily the newest ones. Often an older (10 years or so) rig that was top of the line is a better bet than the same money spent on a new rig.

For clean keying characteristics, the Ten Tecs are hard to beat. They have unmatched QSK, clean keying, nice tuning mechanisms, and excellent service and manuals. The older models (Corsair 1 and 2, Omni 5, Paragon 1) are often available for decent prices. The optional filters for them are also less expensive. Most Ten Tecs can be set up to use 250 and 500 Hz filters, often in cascade for really sharp but nonringing selectivity.

Receiver performance is where some rigs shine and others don't. Many rigs do not permit you to defeat the AGC - a must for good CW reception under crowded conditions. Some have limited selection of sharp filters, or very expensive sharp filters. Some are so small you need to operate the controls with tweezers. "Phase noise", a parameter that is important in today's synthesized rigs, is notably higher in some rigs.

For the best evaluation, look at the QST product reviews. The ARRL HQ folks actually buy the rig, test it in the lab, and use it on the air. The review compares the published numbers and features with those measured in the lab - and their lab is very well-equipped. (I was there - it made me drool!). They show 'scope pictures of the keying and spectrum analyzer displays of the SSB two tone tests, for instance, as well as lots of other stuff.

There is a book of reprints of the reviews for sale, and if you're an ARRL member, you can go to the website and look up any product review for the past 10-15 years or so.

http://www.arrl.org

If you have any interest in kitbuilding or QRP, you owe it to yourself to check out the new Elecraft K2 rig. Although QRP, a QRO add-on is in the works. You can get all sorts of info on the website - even download the entire manual for free. Lots of pictures and testimonials from owners. Review was in this month's QST, and was very positive.

http://www.elecraft.com

What do I use? None of the above. I can't afford the rig I want, (Ten Tec Omni 6 with all the sharp filters) and the ones I can afford I don't want. Last manufactured rig I owned was a Ten Tec Argosy, which I bought used and sold in 1984. Nice, but too small for my taste and only 50 watts out. And I needed the money.

So I designed and built a bandswitching 80/40/20 meter hollowstate CW-only transceiver from recycled parts, and I have a ball with it. Pair of 807s puts out over 100 clean watts, and the 866As glow really nice under keying. Look up the scores for N2EY in Field Day or the November SS, and see what such a rig and a wire antenna can do.

That Elecraft looks mighty tempting, though. And the recycled parts that I used to get for a song at hamfests are now in demand, and starting to get big prices. You never know....

After hearing some great replies from this newsgroup, the general consensus is that the modern rigs
are fine. Perhaps I can change your question, "Which key is the best around?"
I prefer the Vibroplex single paddle.

Source record: 84689

EXTENDED RECEIVER:

Turn off the radio

Press and hold the band and squelch buttons.

Turn on the radio while holding these buttons, wait for 5 seconds
before you release the band and
squelch buttons.

Now the receiver should be opened up as far as it will go.

CROSSBAND REPEATER:

The IC-W32E tranciver is a funny little radio that can do alot more
than it does when it leaves the factory.

On my radio i have RX on these FQs:

AM 108-136MHz
FM 136-200MHz
300-400MHz
400-600MHz
600-1000MHz

Now these are the FQs that is shown in the display so if U got a FQ
far away from ham bands that dont work
that is OK. I havent tested the sensitivity on different FQs so that
is for U to do.

Now to the really fun part, the TX FQ can be these:

FM 108-136MHz
136-196MHz
362-400MHz
400-492MHz

The further away from ham FQs U use the lower the output power will
be.
And remember that your antenna might not be built for all these FQs.

To use extended RX FQs U have to do like this.
While pushing [SQL] and [BAND] turn on power.

It is as easy as that at least on my radio. This can be diffrent on
some radios that are sold in contrys where
it is illegal to listen to other than ham FQs.

WARNING!
WARNING!
WARNING!
WARNING!
WARNING!

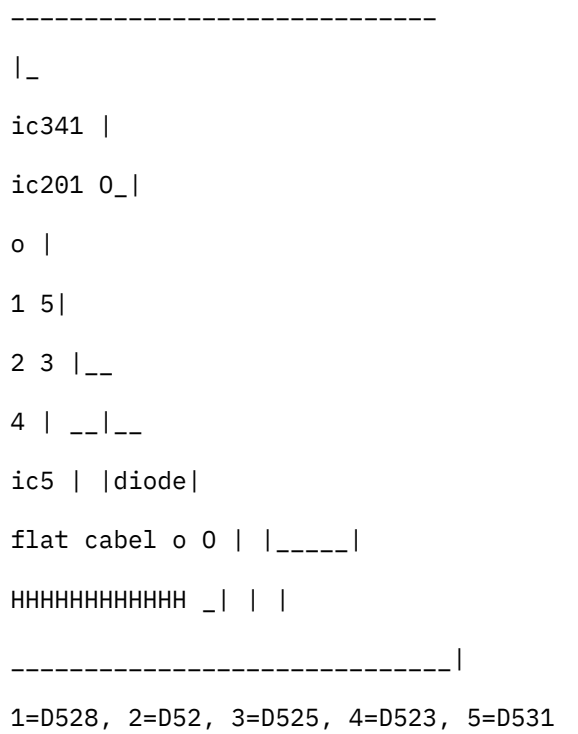
WARNING!

Your warranty may be expired if U take your radio to pices!
And most likly it is illigal to have a TX expanded radio in your
contry!
For the TX expantion it is a little bit more dificult. U have to
solder in your radio.

First U have to remove D523 (4) on the logic unit.

Remove battery, remove 6 screws on the metal plate under the battery,
lift up the metal plate and there is the
logic unit.

It shoult look someting like this.



1=D528, 2=D52, 3=D525, 4=D523, 5=D531

All diodes have 3 legs!
Then push for RX expand.

Crossband repeater function is possible on the IC-W32E but it dosent
work on my radio. It depends on witch
CPU U have. But U could always try it.

Set VHF and UHF FQs, turn tone squelch on, turn lock function on, turn
off the tranciver, push [SQL], [MAIN]
and [BAND] keys and turn power on.

I have a Kenwood TS-850SAT and this radio have a "oscillateing" output. In FM it is wery obvious but i have also seen it on RTTY. At 50 Watts output FM does the output goes from one white dot below where the read dots start to one read in the meter. It is also visibel on a external meter and on the current drain from my power. The power drain from the power supply is not to high. It is normal and it not too much to handel for the powersupply either. I do hope that someone on the list may give me an idea of what the trouble may be.

Please answer me of the list at la5hja@repairman.com

A friend of mine has the Kenwood TH-79 rig, and would like to use it to work the LEO FM satellites. Since the receive frequency only goes down to 438 instead of 435 MHz, he is unable to do so.

Is anyone aware of any modifications to this radio (factory or otherwise) that would lower the receive frequency to 435 MHz??

I have written to Kenwood, but have not heard from them at this time.

Thanks in advance for your responses.

They are an excellent beginners rig and a very good value today. I bought one 10 years ago new...it was my first "modern" solid state rig! I still have it as my "back-up" radio. They don't have a whole lot of "bells & whistles", but coming from '60's tube gear the TS-140S was a marvel for me with no-tune QSY, digital read-out and a hand-full of memories!

Maybe you don't hear much about them here is that they were pretty reliable (no potting compound problem like on the 440S). Also, they are not "sophisticated" by "modern" standards so there may not be that much interest in them.

The only problem I had in 10 years was the slide pots for mic gain and power "stick" sometimes...it is a common problem.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

----
25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.

telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

I own one of these, and I'm sorry to report it has been a lemon. It had audio problems when I got it, and Yaesu could not fix them in warranty. It is now two years old, and has an intermittant transmit problem. Yaesu says they will now fix my audio problems for $130, but I have no confidence they know how. I just went out and bought an Icom 207h to use while this is in the shop. For less than half the price it seems to be a much better built radio, and includes the standard featurs like CTCSS decode that Yaesu leaves out. Buy something else.

I got my Yaesu back from repair with a microphone that smelled like someone sprayed cologne on it. I tried disassembling it and washing the plastic parts in alcohol and soapy water, but I still couldn't get it all off. I wish you luck. I believe the standard treatment for removing smoke from cloth and books is ozone. You could put the book in a plastic bag with one of those ozone generators and see if it helps. Not sure what that would do to the electronics.

How to turn $6 into $50,000!-Or more!!-It 100% works!!!
READING THIS COULD CHANGE YOUR LIFE:

This really does work if you give it a honest try!

I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I though, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading.
Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: "what have I got to lose except 6 stamps and $6.00, right?" Then I invested the measly $6.00.
Well, GUESS WHAT!!... Within 7 days, I started getting money in the mail! I was
Shocked ! I figured it would end soon, but the money just kept coming in. In my first
week , I made about $25.00. By the end of the second week I had made a total of over
$1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now
my fourth week and I have made a total of just over $42,000.00 and it's still coming in
rapidly.
It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, why it works Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it.

I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!

Suggestion: Read this entire message carefully! (print it out or download it). Follow the simple directions and watch the money come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage)

IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends.

PLEASE NOTE:
Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.
Here are the 3 easy steps to success:
STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." "Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery).
Next, place one paper in each of the 6 envelopes and seal them, MAKE SURE THAT THERE ARE ENOUGH STAMPS ON YOUR ENVELOPES. You should now have 6 sealed envelops, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill.
What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL!
You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!

Mail the 6 envelopes to the following addresses:

#1) William Rosser - 254 Getzville Rd. Amherst, NY 14226
#2) Rae Patterson - 150 Hauli St. #150 Wailuku, HI 96793
#3)Connie Wrenn - 111 Chesterfield Dr. Elizabeth City, NC 27909
#4)Christopher Petersen - 222 Haulani St. Pukalani, HI 96768
#5) GERALD R. DE CROCE- 2 HERITAGE CT. MORRIS PLAINS,NJ 07950
#6) Alex Beltran - 6650 Hogan Dr., Sacramento, CA 95822

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc.) and add YOUR Name as number 6 on the list.
STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups or emails, (I think there are close to 50,000 groups) All you

need is 200, but remember, the more you post, the more money you make!
**EVERYBODY AROUND THE WORLD CAN DO IT, BUT REMEMBER TO PUT
ENOUGH STAMPS ON YOUR ENVELOPES!!!!!**

This is perfectly legal! If you have any doubts, refer to Title 18 sec.
1302 -&- 1341 of
the Postal lottery laws. Keep a copy of these steps for yourself and,
whenever you
need money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the
honesty and integrity of the participants and by their carefully adhering to
the directions. Look at it this way. If you are of integrity, the program
will continue and the money that so many others have received will come your
way.
NOTE: You may want to retain very name and address sent to you, either
on a
computer or hard copy and keep the notes people send you. This VERIFIES that
you
are truly providing a service. (Also, it might be a good idea to wrap the $1
bill in dark
paper to reduce the risk of mail theft.) So, as each post is downloaded and
the
directions carefully followed, six members will be reimbursed for their
participation as a
List Developer with one dollar each.
Your name will move up the list geometrically so that when your name
reaches
the #1 position you will be receiving thousands of dollar is CASH!!! What an
opportunity for only $6.00 ($1.00 for each of the first six people listed
above). Send it
now, add your own name to the list and you're in business!

--------DIRECTIONS--------FOR HOW TO POST TO NEWSGROUPS--------------
Step 1) You do not need to retype this entire letter to do your own
posting. Simply put your cursor at the beginning of this letter and drag
your cursor to the bottom of this document, and select 'copy' from the edit
menu. This will copy the entire letter into the computer's memory.
Step 2) Open a blank 'notepad' file and place your cursor at the top
of the blank page. From the 'edit' menu select 'paste.' This will paste a
copy of the letter into notepad so that you can add your name to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do
your postings in different settings, you'll always have this file to go back
to.
Step 4) Use Netscape or Internet explorer and try searching for
various newsgroups (online forums, message boards, chat sites, discussions).
Step 5) Visit these message boards and post this article as a new
message by
highlighting the text of this letter and selecting paste from the edit menu.
Fill in the
Subject, this will be the header that everyone sees as they scroll through

the list of
postings in a particular group, click the post message button. You're done with your
first one!
Congratulations THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!!

BUT YOU HAVE TO POST A MINIMUM OF 200**
That's it! You will begin receiving money from around the world within days! You may
eventually want to rent a P.O. Box due to the large amounts of mail you will receive.

------------------------------Now the WHY part----------
Out of 200 postings, say I receive only 5 replies (a very low example).
So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00!
Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $625.00!
OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625.00! With an original investment of only $6.00!
AMAZING!
When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the Internet and reading these articles everyday? JUST LIKE YOU are now!!

So, can you afford $6.00 and see if it really works?? I think so

Remember, play FAIRLY and HONESTLY and this will really work.
GOOD LUCK!!!!!!!!!!!

"Hard work beats talent, when talent doesn't work hard"

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com / http://www.hamexam.com

I am curious - what speed Pentium were you using? I regularly program Sabers and other Motorolas with a P133 notebook without a problem. I have observed people having problems with faster machines on certain software, but it resulted in the radio not taking the programming - never seen it wreck a code plug.

Hi Gang,

Since I haven't had much of a turnout on this last set of estate auctions, I'll tell you about it once more. I have the 1st and 3rd editions of Reference Data for Radio Engineers from the 40's, Gernsback's Alternating Current for Beginners and the first 4 years of Ham Radio Horizons. Opening bids are $4.99 and down. See them at:

http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=radio_randy

As in all my estate auctions, the proceeds are being forwarded to the widow. Thanks again for looking.

73, Radio Randy

Open the unit up and press a small, say 1/2 lb or less, fresh sunfish or crappie into the inside and reseal the unit back up. In a few days or so, you will forget all about the smoke smell.

R.Steven Smith wrote in message
<2653-38BDAB96-30@storefull-281.iap.bryant.webtv.net>...
As I recall a while back, someone mentioned, that by using those little pieces of paper, that people place in a dryer while drying their clothes worked for them getting the smoke stink out of old receivers, I guess those paper deal absorb the odor, and give off a more pleasant smell them selves. for the life of me I cant recall what those tissue like papers are called...good luck 73

circuit?

The 23 amperes refers to the output 14 volts, not the input 120 volts. If you look at power (volts times amps) the output power can go up to 350 watts. (25 times 14). The power supply is not very efficient (say 50%) so the input power is 700 watts. This relates to 6 amps or so. (700 divided by 120). Well within the rating of 15 amps on the wall circuit.

> Everything works fine if I am listening, but if I transmit on low power (5

> have 2 computers in the same room turned on, and a monitor. I also have a
> computer turned on in an adjecent room. One or both of the monitors will
> flicker out when I transmit

This portion of your problem is due to RF from the transmitter radiating into the room. This is usually due to a bad connection on some RF cable.... usually between the transmitter and antenna. Frequently the problem is traced to a bad ground connection on these cable connectors. Both the power supply and the computers are susceptible to RF radiation.

You might also have a bad grounding system for the set.

To test, I'd replace the antenna feedline with a short piece of coax into a dummy load and see what happens.

Anyone got any information on building a fractal beam, quad etc for 2
metres?
What are the basic rules? can they be directly scaled ie. from 10 metres
to 2 metres?
Have you a sure fire design or operation tips?
Apart from a load of bent wire what do I need?

Please help if you can....thanks ... Dave

It sounds like it's an RF leak problem or a bad power supply. I'll call up the outfit I bought it at today.

I probably should have added the following. I am currently using a magmount antennae that is about 10 feet away. I have another antennae all ready to go, but I'm waiting to go through my home owners association so I don't break too many rules by putting one up. I also have a Yaesu VXR-5 that transmits at 5 watts. When it transmits in the room, the RF doesn't interfere with the computer equipment. It's only the Kenwood that interferes. I'll double check my connections when I get home.

Thanks.

Icom 781 HF rig with built in tuner,built in scope,built in power
supply. 150Watts, Does full
power, I put it on a dummy load and it puts out 150 Watts. Comes
with Manual,Power Cord.
No original box and no mic comes with it. This rig works 100
percent
and the scope is nice and bright. The metal cabinet that goes around
it has a few touch ups on it.
The serial number is: 01779 As I stated, everything works
GREAT. Of course this would be double boxed
and packed well.

WAS: 2,675.00 NOW: 2,500.00 FIRM
Or trade for GM300 VHF and UHF Mobiles
of equal value or Spectra Mobiles VHF and UHF. Ham Gear,
Also looking for Collins Gear. Just let me know what you have.
Reply Email.
Thanks for reading,Rich.

Source record: 84554

Wow! Looks like I'm not the first non-smoker to have this problem!

Thank you all for the excellent suggestions on eliminating the smoke smell from a radio and its user manual!

Follow-up report:
The Radio-
No dryer sheets in the house but I did find Febreze. After cleaning the radio I stored it overnight in a ziplock bag with a cloth that had been sprayed with Febreze. The improvement in one day is amazing. I'd bet that following the same process for several days will take care of it.

The User Manual-
After lightly dusting the paperwork with a Febreze'd cloth I stored all of it overnight in a different ziplock bag. No noticeable improvement. I may try the same thing for a few more nights, then switch to charcoal in a ziplock in the freezer. It won't be too much longer however, before I go make a copy of it so I can learn how to use it without getting sick. [Imagine trying to "wing-it" with a new dual band HT with wide band receive, cross-band repeat, 200 memory channels with alpha ID display, etc. HA!]

Thanks again for all of the help!

I have a K2 on order right now. They are talking a 2 week or so
backlog.

By the way, even if you don't think you'll want SSB, if you buy the K2
you should be aware that adding the SSB module later means you
have to tear it apart to make changes. If you buy the SSB and build it
with the SSB option, it's supposedly saves a lot of effort.

Joe,

I have a similar problem w/ my 940. It just started 2 weeks ago. My 940 heats up for 10 to 12 minutes, then the display blinks and goes out, not to return until the rig cools off, where, once again it goes blank.

There is one difference from what you wrote, and the condx that I have. In my case the display goes out only when the VFO is tuned between 19.5 mhz and 30 mhz. It works just fine on the lower freqs.

You did not mention whether the radio plays when the display goes out. Mine doesn't. Does not xmit either. The service manual mentions that there are 3 VCOs on the RF board. The highest one covers 19.5 to 30 mhz. I am suspicious of a component having heat failure. To that end, I have ordered some circuit cooler to see if I can isolate the part.

Hope this helps (you and me),

Bill K9MSN

Hi Bill, Rig continued to receive when the display blanked out. Did not
try to transmit. One time, it went blank, and then when I tried to turn
the VFO knob, it went "up" in both directions (ie, turn knob both
CW and CCW but the freq only rises).

Anyway, did this on 20M SSB and CW. The hard-reset
fixed the problem temporarily.

I tried it last night and had no problems...managed
to work VP6BR on Pitcairn Island on CW, and fo0aaa on SSB on
Clipperton with zero problems (except for the "Up" police
interfering/ QRMing the rare DX).

Sounds to me like you are getting a VCO unlock condition as the
result of a faulty component (heat, as you suspect).

Quick question: what's your rig serial number? How old is it?

Does anyone out here in internet land
know if the control boards in the TS940 has the same problems as
the control board on the TS930 (which is very prone to failure)?

thanks,
Joe K7JOE

> ...users manual smells even stronger...

> ...advice on how to "get the smell out"[?]...

Here's two industrial strength suggestions -

--

Propylene Glycol
Is a chemical that converts organic odors to
simpler chemical compounds. Buy it at a paint
store, industrial cleaning supply place, chemical
supply house, paper bag or janitorial supply place.

Put a few drops on a sponge, put the HT, book and
sponge in a plastic bag over night. It will eat
the smell. You may need to open the pages of the
book a little to reach the innermost pages.

It will not destroy or damage plastic, paper
electronics etc.

--

Ionizer, sometimes called Ozonizer
That's an air cleaner/filter device used in hotels.
They use it to eliminate the smell of cigs in smokers
rooms. They set it up in the room for about 15 minutes
and it sucks the smell out of the carpets, drapes,
mattress etc. If you had a friend working at a hotel
he/she might be able to add your HT and book to
the next room they ionize.

Or next time you check into a hotel, bring the HT
and book, leave them in the room and ask the staff
to run the ionizer while you go to dinner. When you
come back the smell should be virtually non-existant.

UV will do the same thing, just slower. Exposing it to
the sun will help.

Hope some of this helps...

The problem you have is with the Eprom socket. Reseat the
eprom.

VCO unlock in any Kenwood radio will: 1. Blank the display.
2. The radio will neither tx or rx.

Loss of display without loss of rx is not a vco problem.

Would someone mind answering this question: What's the deal with these Fractal Antennas? Are they actual devices with measureable performance figures, or are they just imaginary objects that people have made up to argue about? It seems like there's a lot of bad blood concerning these (virtual?) antennas -- I've seen a lot of rather caustic discussion about these things, and I'm interested in some perspective. If they are real, then what's the holy war about?

Source record: 84582
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

A while back, I asked about the Ten Tec 1210 transverter. Got several replies about it, but some negative feedback on using the Uniden HR-2510 as an IF rig - several thought that it was not so good from the RX standpoint. Combining those replies with my concerns about 10M RX interference on ANY radio in my neighborhood, I chose to back off on that plan! I'll search for another reason to fire up the old soldering station. Meanwhile, I still want to play with hi-band all mode. Seen ads for different models in the NG's; now looking for "user reviews" on some rigs; specifically the TR-751, TS-711, maybe a TS-700 to match my sweet old 6M rig. Might be convinced to consider an FT-series, but I'm kind of a Kenwood fan. Oh, and if you have a pet antenna for this mode, include that and save me the bandwidth later! Have space for abt 9-13 eles just above the 6M yagi.

Reply via the NG, or to kc7bdp@juno.com , and thanks.

Jimmy

Hello,
I would like to have info regarding any dealings that my fellow amateurs may have had regarding Ted Seely, AA4GM as I had some bad dealings with him regarding a deal on Yahoo Auctions for a pair of Heathkit twins. I won them fair and square, but apparently once he found that I am JUST a No-Code Tech class amateur (he being Amateur Extra) decided to not answer my emails in reply to his emails to confirm the winning bid.
My query resides in the above dealings in that I wish to know if this Amateur is renowned for this type of dealing with other subordinate hams. I thought this was a fraternity of learning and mentoring of younger hams by Elmer's who would encourage, but I think that this man overlooks the elmering he once had and the gleam in a budding amateurs eyes at the glowing of vacuum tubes that reminded him of the day when he himself was 13 and an uncle gave him his Heathkit twins to remember him by and possibly become an amateur and subsequently passing this to his children or family members some fine day in his old age. Please if you have ANY such info please contact me that I may warn some of my young amateur friends to STAY AWAY from this man.
I'll step down from my soap box now a bit more educated and CAUTIOUS of my fellow hams as I have been bitten.

160. Help Yaesu ft50r

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-03 00:00:00 UTC
From: "Philip L. McCleary" <pbpd520@gate.net>
Message-ID: <89pkni$16o6$1@news.gate.net>
Source record: 84396

Hello all

I have an ft50r handheld works great. I am however unable to get the radio to program using the adms-1e software and cable package.
I follow the steps and all I get is a receive time out error from the software. The software is set up on comm1, nothing else is on comm1, and I am out of ideas.
I tried the system on another computer with the same results.

Thanks for any help
Phil

First thing I would look for is contact between the coax or antenna and a
powered source.

Back in the good old days of plate-modulated AM, a single class C 6146 was rated at 2.5 ma maximum grid current. That was continuous, of course, so SSB or CW could be a bit higher, but I wouldn't push it.

I just KNOW I saw someone makes a thin leather case for the credit card sized HTs. I have the Alinco DJC5. The case I saw keeps the darn thing so it will not slip out when you bend over. It was leather, cut to the shape and size of a shirt pocket and had a place to slip in the HT and maybe even antenna beside it or pen/pencil.

I can't find the ad or new product feature in any of my last year's magazines or the web. Anyone know who makes this beastie and how to get one???

Thanks!
Chris

I have had a Sony 7600 for the past couple of years and have found it to be a great radio for the money. Paid around 150 from Universal Radio.

Good:
Solid feel
Good sensitivity/sync detection

Bad:
Only 10 memories
Not the best sound, but that's what I have a good stereo for

Check out Radio Netherlands site for good info on most SW rigs out there. Tells all the ratings that are in the Handbook.

First thing I would do is get some real good switch/ contact cleaner and clean all the rotary band switches real good. Those are common on drakes to get dirty and flake out. Your vox action sounds fairly normal. It varies with the gain setting. Also make sure you clean all the other switches too . That you can hear your signal is a good sign. Sounds like a flaky switch to me. Try jiggling them back and forth. Many times that will spot the one acting up. I have these types problems on my old drakes after they have set up for a few months without using. I'm fairly sure you have nothing thats real serious. They are pretty reliable rigs overall, once burned in and going again. I have a T4XB and a old R4, but don't really use too much anymore. But I still hate to sell them. I always liked drakes in the 60's-70's. So I keep them around as historical items..:) I still have an old 2C and 2CQ also.

177. ! FREE Swap Shop with FREE Contest

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-03 00:00:00 UTC
From: John Duke <johnduke50@hotmail.com>
Message-ID: <C7Jv4.9614$3z.99039@newscontent-01.sprint.ca>
Source record: 84453
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

No gimmicks, no strings attached at
http://va3wm.haybay.net

This is a free Swap Shop for ham radio operators and SWLs alike.

The more exposure you have for whatever it is that you want to sell or buy the quicker you will realize your expectations. Using newsgroups to buy or sell ham radio equipment is great, but so too is using Free Photo Classified Ad sites like http://va3wm.haybay.net .

*** There's even a free monthly contest on the site. ***
*** The $9.95 El Cheap-O Contest. Don't miss it. ***

I am John Herzog VE3DOP and I run the Swap Shop as a major part of my participation in our wonderful mutual hobby.
The classified ads program that IS the Swap Shop is fully automated and runs in real time. Just as soon as you have placed a free ad it appears online. If you wish to include a picture that you have you may upload it for free and it will appear immediately. No bills, no invoices, no nags, just quality FREE advertising.

Does that appeal to you?

TIP:
If you have a number of items to sell or that you want to buy DON'T lump them all together in one big ad. Split them up into several ads. That way you get to write more eye-catching headlines, and the one item you're selling that someone else is looking for won't get lost.

Classified advertising on http://va3wm.haybay.net is free. Get the most out of your advertising dollar that you can. Maximize your exposure, minimize you time. Succeed quickly, use plenty of ads, they're free!

At http://va3wm.haybay.net/
Whenever you want to place an ad you can. The Swap Shop is open 24-7-365.
Whenever you want to delete your ad prior to its automatic expiry date you can do so.
Whenever you want to edit your ad you can do so.
Whenever you want to update your picture you can do so.
Follow this URL http://va3wm.haybay.net/ for the best in classified advertising for ham radio operators.

If you want automatic notification of new ads for items you're interested in then this is the Swap Shop for you.

If you want a SAFE place to use your real e-mail address without fear of spammers harvesting it then this is the Swap Shop for you. http://va3wm.haybay.net uses a reply system that hides your e-mail address. The only way your e-mail address could possibly be shown in any ad you place would be if you were to use it somewhere on the fill-out form where it doesn't belong or if you were to include it in the body text of your ad.

If you want to include a hypertext link to your own web site along with your ad then this is the Swap Shop for you.

If you want to increase the exposure for you item(s) then this is the Swap Shop for you.

Don't hesitate any longer follow this URL now. http://va3wm.haybay.net

****
Do I have some sort of revenue producing angle connected to this web site? Frankly, yes!

CAVEAT---
If you're in the BUSINESS of buying and selling new or used ham radio equipment or services then this is the Swap Shop for you IF you're willing to pay a LOW PRICE for your advertising. Classified ads that are obviously from commercial interests will be deleted in the most Draconian manner UNLESS prior arrangements have been made. To find a 'real' e-mail address for me visit the site http://va3wm.haybay.net or remove the X from SwapShopAdvertising@Xhaybay.net

For the past couple of years this web site has been strictly a hobby enterprise for me. To date I have not made dime one from it. Excluding any value that my own time might have, in terms of hard cash I have well over one thousand US dollars sunk into this site. My objective is not so much to recover that investment, but rather to have the site pay its own way from here on in.

How? By selling banner advertising space.

I make part of my living by promoting other peoples' web sites That is very time-consuming work. And just like the auto mechanic who drives a wreck I have not been paying the attention to http://va3wm.haybay.net that I should have. High time for a change. It is now my purpose to make this web site so

popular that advertisers would be foolish not to advertise on it.

The relationship between a popular web site and the people who use it is symbiotic in the extreme. This is especially true in a situation as exists with http://va3wm.haybay.net . The more people there are who list ads on it the more likely it is that those ads will sell quickly. The more people who visit this web site OFTEN the more attractive it becomes for banner advertisers, especially those who are targeting ham radio operators. An advertiser using banner ads that he or she KNOWS are being seen by their target demographic group is a HAPPY advertiser. The busier this web site is the more likely it is that its owner won't go broke floating it. Symbiotic, everyone wins.

Thank you very much for reading this far. Now, please go to the site and list something or buy something.

73 de

John VE3DOP

Ok, so I have an Eagle Spitfire 454 from Copper- I know the mod that makes the frequency coverage just like the Cherokee AH-100 after mods, 25.165 to 29.700mHz. However, if you've opened the rig you know that there's like 10 different solder points there that could be bridged or open. I'm wondering what these other ones do. Why can't this radio open up from 25-32 mhz like the 2950? Is there a mod to make the clarifier track on transmit as well? How about getting rid of that HORRIBLE keypad beep? Is there a mod to step in 1Khz steps rather than 10? There are enough solder pads there for a whole bunch of different mods. Any way to get a service manual for this rig? Or sources for the other clones? All I can find is the Eagle and I've never personally seen the Titan and Dragon versions....

Also- this may not interest anyone here in CB land but I also have a Cherokee AH-50 SF, its a 6 meter handheld rig. It has four open solder pads inside, and two empty holes with a diode picture silkscreened on the PCB. I bridged all four solder points and put a diode in the holes where indicated. Nothing happened. Does anyone know of any mods for this rig or a way to get a service manual?

Hi ,
I just want to learn the power cards price of TS-430 or the output transistors.
And the availability of international shipping of them..
Or where can I find it?

Thanks

TA2NC

Hi all.

I'm actually looking for two(2) full Drake C-lines, but I'm willing to put them together a piece at a time.

In particular, I am looking for the R4-C, T4-XC, AC4, MS-4 plus station mic. All must be in as near-mint and fully operational condition as possible. Need manuals and interconnect cables, too.

The R4-C must have a full complement of xtal filters, NB. Late production version preferred.

Please email with price, condition, and any mods that have been performed to:

NeilR@innermedia.com

or you can phone me at (603) 465-2788.

Thanks in advance.

188. Rat Shack HTX-10 microphone bias

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-03 00:00:00 UTC
From: ccox@chopped-ham-filtre.uhc.com.invalid
Message-ID: <89odra$iou6$1@pike.uhc.com>
Source record: 84464

I have determined that the problem I am experiencing with my
HTX-10 is definitely that the electret microphone bias is
missing from the microphone connector (the centre pin).

Can someone that has the schematic diagram for the radio let
me know how the voltage is supposed to be supplied; i.e. is it
directly to the +12V supply line, or via some current limiting
resistor, perhaps enabled by PLL lock or something.

Thanks

>10?..... I've never personally
>seen the Titan and Dragon versions...."

The Titan, unlike the Copper radio does the 1Kc steps right out of the box.
As far as 25-32Mhz & other "mods", the radio has to have been designed &
"burned in" for these functions at the factory & then "blocked". "Modifying"
any modern radio like a 2950/Titan/Yaesu/Galaxy/Scanners/Connex/Alinco etc, is
really Actually "UN-modifying" it, to restore the original freqs&channels
designed into it by the factory before they "blocked or modifyed" it for the US
market. I'm pretty sure the Titan & similar don't have the ability to display
or generate freqs between 30-32Mhz "hidden" & blocked in their chip.....

1st I would agree on the K2- best CW rig I have owned- and this includes
all the BIG names.
Secondly, on adding the SSB module- the changess on the RF board to add the
SSB option are simple and might require 5 minutes total time.
The 160M option is a different story as it requires removing the PA
heatsink- but still easily accomplished.

I have the Vibroplex dual paddle and the Bencher- both are crudely built in terms of tolerances
although the Bencher is a bit better. I just bought the Schurr Profi from Morse Express- there is no
comparison- but they are not cheap.

From Microsoft news 3/3/00

Online auctions No. 1 Net fraud in '99. (Top)
The popularity and convenience, not to mention the typically simple payment methods, of online auctions have made it easy to defraud consumers out of millions of dollars. Just counting the complaints filed with the National Fraud Information Center (NFIC), consumers lost $3.2 million to Internet scams in 1999, and online auctions were No. 1 on the NFIC's list of Internet scams. Though online auctions topped the NFIC's list in 1998 as well, they increased by almost 20% in 1999, totaling 87% of the complaints filed, compared to 68% a year before.

NFIC's top Internet scams of 1999:

Online auctions

Non-auction general merchandise sales

Internet access services

Computer software and hardware sales

Work-at-home scams

The focus on online auction fraud is highlighted even more clearly when you consider that there were only 107 complaints filed with the Federal Trade Commission about online auctions in 1997. In 1999, the FTC received almost 11,000 such complaints. To combat this trend, the FTC has launched a three-pronged effort that combines law enforcement with consumer education and the training of federal and state law enforcers in tracking and prosecuting Internet scammers.

"We've trained state and local law enforcers from Florida to California to seek out and prosecute Internet fraud," says Jodie Bernstein, director of the FTC's Bureau of Consumer Protection. State and federal law enforcers have filed 35 cases against online con artists to date, the FTC says.

While online auction scams cost their average victim $293 in 1999, according to the NFIC, the biggest per-transaction losses were from frauds involving computer equipment and software sales, bilking consumers out of $580 on average. Susan Grant, director of the NFIC's Internet Fraud Watch, attributes many of the online auction losses to check or money order payments, which leave consumers little hope of redress if no escrow service was used. (For more on online fraud, see the MSN MoneyCentral Special Report, "Bid Safe, Bid Smart.")

"Paying with a credit card is the safest way to shop online," Grant says. "Federal law protects credit-card users if they don't get what they were promised or if unauthorized charges are made on their accounts."

Hi!

I understand the whole point of (most) mods; the manufacturer has designed in certian features and then blocked them out in certian versions of the radio, to accomidate different bandplans, etc in different countries.
I'm not specifically questioning "why cant I TX from 25-32 mhz like my 2950", I'm merely stating that there are a LOT of jumpers in the radio and there are probably a lot of different options that could be enabled/disabled. I am wondering if anyone has a list of the jumpers and what they do, OR knows where to get a service manual for this radio. Copper sells a video tape covering the mod. Im wondering if anyone has seen it and if it just covers the 25.165 to 29.700mHz mod (like the Cherokee AH100) or if it covers each of those little 'jumpers' and what they each do.

Also I am very interested in the AH-50 and AH-50SF 6 meter HTs from Cherokee. I performed mods as indicated below and nothing happened!

I've found it difficult to deal with Cherokee, (Wireless Marketing in Schaumburg IL) and impossible to find Maycom, the original overseas manufactuer of these units. Has anyone ever seen a service manual for any of these units? (AH-27, AH-50, AH-100....?)

Thanks.

Hello! Please see my other post in reply to this. I just pulled my Eagle 454 out of the box and checked- you are wrong, when I hit the 'step' button I can choose 1,10,100 khz steps. Right out of the box- I did no mods to this rig (yet!)

I checked your website- it's pretty good. I have a question- on your 10m page, what's the difference between the "Titan I- the Titan 201" and the "Titan Road Pro". I noticed your picture of the Road Pro is Copper's picture of the 454-from their website- with the name blacked out!! Next time I'm down NJ way I'll stop by with my digital camera and take some good pics for you! :D

Seriously though- as a dealer, do you have any access to a service manual for these radios? Obviously they are all made in the same factory so a Titan manual should be the same or similar as the Eagle. If you have any contacts with the factory I'd like to try to contact them directly (although I dont know how useful a Phillipino manual would be!)

P.S. My freq counter doesnt go below 30 mhz so I cant verify this- does the clarifier on the eagle/titan track (change frequency) on transmit also? (I guess I could use another CB to see...)
I actually found a mod for the AH-100 to: Unlock clarifier and add FM compatibility but it refers to parts I can't find inside the rig. I think it may be a mistake.

Dear Gary,

Thanks for the info. I can pass on satellites... and I do agree that
the FT-847 is the choice radio for satellites! I had the FT-847, it
was easy to work satellites. But, at this time, I am only interested
in the raw radio for making contacts and ragchewing on HF & 2m.
I do not have a mobile rig, so I thought that this would be great for
a base radio.

I was going to get an HF rig & 2m mobile (or 2m/440). My first choice
was the IC-706, because I wanted to spend around $600-700! But,
I looked at the receiver specs, and it the IC-706MK1 looks kinda
shabby! I messed with one, and it was OK, but not the greatest rig.

Then I thought, well maybe I will just save the money and get
something that will last me a while. So, now I am down to the FT-847
(which I owned one last year) and the IC-746. I want an all around
radio that will do pretty much all that I want. I am really into HF,
so I think that I should go with the IC-746, for one reason.

I would like to also have 6m & 2m again for SSB/FM and VHF contesting.
So, at this moment I am leaning towards that IC-746.

Thanks for the info,

Mike KQ6MU

I keep coming back to the TR-751A as my prefered 2m mobile rig, but I'm going to be playing with the 2m portion of my IC-706 for the June contest. I have owned, or used extensively the TR-9130, TR-751A, TS-711A, TM255A, FT-290, IC-271, IC-275, FT-726, FT-736, IC-821H, TS-780.

For mobile antenna systems, I am personnally a real big fan of KB6KQ's loops (www.kb6kq.com) and have used them in all types of weather and temeratures. I run stacked 2m loops on 2 and 70 for major contests and one 2m loop for around town.

For amps, I like the TE Systems ones. I don't personally know anyone who has problems with them (and I know at least 6 people running them), but have seen several negative experiences on the various reflectors.

73, Don, NL7CO/EM04

ICOM IC-2100H

NEW IN THE BOX

-IC-2100H
-2 Meter Rugged Transceiver
-55 Watts of Power
-ICOM's Newest and Best Performer Against IMD
-Dimensions: 5.5 (W), 1.6 (H), 7.1 (D), 2 lb, 10 oz
-TX-RX (136 - 174 MHz)
-Tested 75 dB In-Band and 93 dB Out-Of-Band
-Adjustable Attenuator (up to 10 dB)
-55 Watts Transmit (10, 5 watts selectable)
-Straightforward, Easy to Use Operation
-Clean, Crisp Audio
-One Touch Button Operation (no function key used)
-113 Memory Channels
-Cool Dual Display
-Selectable Green or Amber Backlit Display
-LARGE, Easy-to-See, User-Programmable Alphanumeric Display
-4 Backlighting Levels
-Backlit DTMF Microphone with 2 User-Programmable Keys
-Heavy Duty, One Piece, Die Cast Aluminum Chassis
-Built to Military Specifications (MIL STD) 810 C/D/E
-for Shock and Vibration
-CTCSS Tone Encode/Decode Built-In (program up to 50 tones)
-Tone Scan Built-In
-Auto Repeater with Busy Lockout
-Priority Watch (3 types)
-Mounting Bracket Included

250. Grid current in Linear Amplifier? - Acceptable limit of -

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-04 00:00:00 UTC
From: LA8AK@online.no
Message-ID: <38c05b7c.90091746@news.online.no>
Source record: 84406
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

wonder what is acceptable limit of grid current in a 2x 6146B
amplifier?
ALC voltage is often derived from varying grid current over bias
network resistors, usually around 10k resistance. 1mA grid current
will develop 10V voltage drop.

Coupled via a 0.002uF capacitor to a voltage doubling rectifier with
output loaded by 0.1uF (ALC circuit) will maximum give -0.2V
A feasable voltage, the ALC circuit may not have any real function at
all
I modified the FL-dx-500 and received very good reports for improving
readability, but it still seems that few mA grid current is within
acceptable limit of grid current for this sort of amplifier using 2x
6JS6A or 6146B

AS I recall, the 101 requires a properly polarized AC source - and
there's even a neon bulb on the rear panel to indicate if the plug is
inserted providing proper polarity - try reversing the AC plug and see
what happens.

let them Get 6 meters, think about, right in the middle of the the tv band, or should i say at the bottem of the tv band. Of course digital will be taking over in the next 10 years anyway. And what about the 2 meter band, you have to deal with channel 18 on cable, can't win for loosing.

Message-ID: <89r4ob$9ep$1@nnrp1.deja.com>
Source record: 84426

I hope someone from Yaesu or Icom is reading this. Put your manuals ONLINE! Apple Computer just started doing it. The manual that comes with the radio might as well be gold plated, your afraid to USE it because your afraid you might lose it and you want it nice in case you ever sell the rig. With the complexities of todays radios, we are soooo dependent on that little booklet. Online,I could print it out and mark it up while I throw it around the car.Those with older eyes could print it out in BIG print.

It's a sales tool too! You can check out the features and operation before you decide to buy. For those mfgs with lousy manuals, you'll have a reason to get it together(since it IS a sales tool).

I think ADI put theirs online but it's a lousy manual and they only scanned it in. It is virtually impossible to read.

C'Mon guys! Get with it!

Source record: 84430

I agree - it is a convenient and nice tool to be able to refer to an online manual. I've already spent considerable time doing just that with the user's manuals for the Kenwood TS-440, Drake R-4C receiver and Drake T-4XC transmitter. I am about 3/4 through with the Kenwood TM-733A dual-bander manual.

I take the original manuals and scan all the illustrations. Then, using Netscape Composer, I have typed all the text and created tables where necessary, with links throughout the manual, making navigation intuitive and very easy. I have an opening index page that has commercial photos of the equipment and a link to a "TABLE OF CONTENTS" that duplicates the navigation of the original manuals. All text and illustrations from the original manual are there, including all schematics, etc. I have also included all equipment modifications and any other material I have collected over the years pertaining to the respective equipment. Makes a nice little package. Kind of big, though - the Kenwood 440 file size is about 12 MB with all illustrations and the Drake files are around 4 MB each.

I think the manufacturers will eventually get there, but the manuals will most likely be in Adobe Acrobat format, which if published from the original source file would be OK, but if scanned from an original manual is usually inferior in image quality.

Sorry for rambling on....

Ross,

I have been using the DX-70T as a mobile rig for about one year. It has performed great and I have had no problems with it. I particularly like it in the mobile because it is simple to operate. I find the Alinco products to be good quality at a reasonable price.

Good luck,

Jim

That's a good point. I'd have to believe that all of the manuals today are put together on a computer with some type of DTP software. Do they know that all they need to do is purchase and install Acrobat, the PRINT the manual to a PDF file?

How could they argue with that?

Easy, right now they have a captive market, if you want a manual you have to pay them for it. Once they publish it on the web, they lose that source of revenue.

However, I agree with the others - it would be a great help to all amateurs and an outstanding gesture of goodwill by the manufacturers if they did put their manuals on-line (especially those for their old, out of production models).

Go take a look at the ADI online manuals.

They took the printed manual and sat down at a cheap scanner for 15 minutes or so. The size of each page is about 30% smaller than the origianl, the contrast is bad; they are almost worthless.

Customer's requested online copies of the manuals in pdf format, and that's exactly what they got. I can hear it now... "Bob, go buy a copy of that Acrobat software and figure out how to get the manuals online."

It's a shame they didn't take the time to find out how to do it the right way.

While waiting for this to happen, try this. When I get a new major piece of equipment (new transceiver or amp) I take the manual to a copy machine (Office Depot or similar) and make a copy of the entire manual, then I put up the original. I put the copy in some type of binder and use the copy in place of the original, which remains in new condition if ever needed again or for use when I sell the equipment. Costs a few bucks but I think it is worth it.

Wouldn't it be wonderful!

Kenwood has been publishing their manuals for a few years now. I have a ts-870, a TMV7A and a TM-G707A and all three manuals are on their site for downloading. I think this trend will continue. They are in PDF format.

I don't know about Icom or Yeasu as I don't buy their equipment (I began boycotting Yeasu in the early 70s when they started marketing their FT101 to the cbers), but Kenwood has started doing it a few years back.

cheers

I don't think anyone does argue with that. As I answered in the orig post -- kenwood does it. The problem with the older manuals (like the TS520/TS430, drake TR4..etc.) is that they probably were never composed on a computer. Hard to believe, but it wasn't until the mid to late 80's that the world did DTP.

The old manual "masters" if they still exist, are probably sheets of tin with the offset image on them (ahh, I still remember that bannana smell from processing those!) Things before the 90s were set by tape, photo mask, and tin. (Kinda why mistakes were 'set in granite').

Now, what would be good, would be to have them all scanned, fixed and converted to electronic format. There is a business for someone. Trouble is, is there any money in it??

well, here's hoping.

I have for sale an original Heathkit manual for the Seneca #VHF-1 xmitter.
this manual is in very good shape with no markings inside. asking $22
shipped u.s. John w3ayt@arrl.net
why buy a copy when you can have an original?

292. Problems with ADI-600

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-05 00:00:00 UTC
From: Gatorfan <Gatorfan@peoplepc.com>
Message-ID: <38c2d20d@flexnet239.uunt.net>
Source record: 84148

I recently bought an ADI-600HP dual band am now on the second replacement Nicad battery from the supplier. I have charged both batteries with a 16v 100MAh charger supplied with it 14 to 16 hours before use. The battery is dead after 3 to 4 hours of receive with NO transmissions made.

I am considering, very strongly, returning it to the place of purchase and exchanging it for an Alinco DJ-G5TH. Has anyone else had similar problems? Am I doing something wrong to the batteries?

I live less than 15 miles from a 500 ft high repeater and this radio will NOT trigger it. I am a very frustrated new ham. Any help or advice would be appreciated muchly.

Remove SPAMNOT from email address below to reply, please.

Source record: 84149

Hi,

Do you own any Tokyo Hy-Power Labs ham equipment? Are you interested in anything Tokyo Hy-Power makes or has made over the years? If so, you might want to join the Tokyo Hy-Power reflector, which is a source of technical information and discussions, a place to buy, sell, or trade THP equipment, and a forum for discussing operating their equipment. The discussion also includes equipment made by Tokyo Hy-Power, but sold under an American company's name, such as the monoband transceivers sold by Amp Supply Co. and Kantronics.

More information, including how to subscribe, can be found online at:

http://www.netferrets.net/thp

The official Tokyo Hy-Power web site (which is in Japanese) is at:

http://www.thp.co.jp

I hope to see you on the reflector.

73,
Caity

I bought a Fluke model 23 about 10 years ago. I think I use it a least once a day since then.

I have been building electronic projects / fixing things, etc since 1968 and have gone through quite a few vom's etc., and was hesitant to go digital. The Fluke is perfect. If that baby every died, I would replace it with something very similar. It is a reliable and acurate piece of equipment -- and rugged.

cheers

p.s. good luck in Thailand -- I actually bought my fluke while working in the outback of australia -- used it out there for many years before coming back home.

Source record: 84152

Not sure what to tell you, except double check that the right chip was
clipped. I made the mods on mine and it works FB.

cheers

Remove the top and bottom covers and the detachable face holder.
Look at the p c board that is vertical behind the front of the radio.
There will be 2 small chip resistors on the left side of the board.
Carefully remove the one with the number 0 . It will be the one closest
to the left near the grounding spring. You will probably have to scrape
it off with a pair of needle nose pliers. After you remove it the TX
should be VHF TX 136.995 - 173.995. UHF TX should be 410-469.995

301. Re: ADI AR-247 opinions?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-05 00:00:00 UTC
From: rsmtmn@aol.com
Message-ID: <20000305173153.02591.00000232@ng-fg1.aol.com>
Source record: 84157

I bought 5 of the ADI radios (AR147, AR247, AR447) and *all* had displays that were scratched up...Its in my opinion that its do to lousy packaging from the factory..The foam that holds the radio in the box rubs up against the display window. I have no idea why the factory would put the foam against the display window rather than on the sides of the display where it wouldn't scratch things up. Heck, the display is the probably the most important part of the radio too...

I sent all of my ADI's back and will try swapping them for a new batch. If it happens again with the next batch I will refuse to accept them. Makes the radios look badly used and like you didn't take care of them. To bad they come that way shipped new.

If you do happen to buy one...Take it out of the box and immediately take it over to a light and see if your display is all scratched up. I tried to wipe it off with a damp rag, but no, they are actual scratches in the window glass of the display!!

Some are worse than others but still, its no excuse for them to be that way at all since they are new from ADI.

Thats my only complaint so far with ADI's.
We'll see what happens with this next batch.

Dan

303. TS-440S: one more time....

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-05 00:00:00 UTC
From: "JOSE V. GAVILA (EB5AGV/EC5AAU)" <eb5agv@ctv.es>
Message-ID: <38C2DD19.D88E1B1C@ctv.es>
Source record: 84159
Cross-posted to: rec.radio.amateur.equipment,uk.radio.amateur,sci.electronics.repair

Hello!

As title says, here I am again with my TS-440S... Probably you remember about my works on my 440, which suffered from a low sensitivity problem in the 10 meter band. Well, I let it opened in the workbench for some weeks, as other things claimed for my attention... until yesterday. Decided to continue with the troubleshooting process, I fired the rig with the signal generator (my recently fixed HP-8640B :-)) in 28.200 (where sensitivity falls to about a 6 in the S-meter with the -73dBm standard signal, which in other bands shows 9 or more). What I found was similar to the morning birds in spring, instead of a constant carrier!. No good, I thought... I checked the generator with another rig and found it worked fine, so the culprit was my 440. As this effect happened in all bands I went directly to VCO-5 in the PLL unit. Opening the metal cage cover, I found that I could change the 'bird sound' just with my finger touching some VCO-5 components. I had a Theremin ;-)!. But not, what I wanted was not a musical instrument but a radio transceiver... VCO-5 in my unit had the dreaded glueing compound removed by the previous owner but it was evident that he had not done it the right way, unsoldering each component and cleaning / replacing, but just removing what he could without lifting anything. I tried to align the VCO by tweaking T-20 while measuring at TP-11 for the 5.0V stated in the manual. Yes, I could get there, but the oscillator kept doing weird things...

So I took out the PLL board and removed every component with the ugly looking compound traces. Exactly, I removed (by this order): Q34, Q35, R144 (which in my rig was really a capacitor), C184, R146, D13, C185, L40, D14, R145, L43, C192, C189, C183, C187, Q36, L41, C190, C188, C193 and R151. Every component was carefully cleaned (there were some traces of the compound in most of them by their bottom side) and checked in value (R and Cs) or working condition (semiconductors). All the components tested fine and, as I had not replacement for them, were put back in the circuit. Once I got the rig reassembled, I powered it to find that something had changed, as I previously had 5.0V at TP-11 and, once reworked, without disturbing T-20 setting, I had only about 3V. Then, adjusting T-20 I got up to about 7V, so it looked at it was working really fine. I left it at 5.0V and then checked the rig with the signal generator. Now the birds were gone and a fixed note could be clearly heard!. Hooray!

Obviously, my 10m sensitivity trouble was still there... And have not found (yet) the way to fix it, as the receiving Band Pass Filter (BPF) for the 22-30MHz band seems fine (the problem I have goes only from

about 27 to 29MHz). In fact, I bypassed the BPF and injected the signal rigth at the output of the filter. I got an slight increase, but still lots lower than in the other bands. I bypassed also other low pass filter and went directly to the RX 1st mixer (Q3 and Q4) at C95, but still the signal was low. I also checked VCO-4 with the oscilloscope, and it generates an almost constant amplitude signal over its range. So I am at a lost about what happens!. If anybody has an idea, please, let me know (using the List as perhaps it could help somebody else).

All in all, I am happy as my 440 is improving (I always try to get the good side of the things ;-))

Thanks for listening and best regards,

JOSE

FOR SALE:
Down East Microwave Transverter model 1296-144. 3W output, with / T/R switch assembly, with additional option of 10W Maximum common IF port option.
This unit has a 144 Mhz IF is in excellent condition and has only been used for several hours of operation.

This unit is factory built and is NOT a kit.

Asking price is $300.00 if you pay shipping will let it go for $280.00. This unit is a good bargain because it is nearly brand new and in perfect operating condition. Price one from DEM and you will see how much you will invest in a new unit with the the same options.

Source record: 84172

Many line powered equipment, especially older stuff, use a network from the power line to chassis. Those components might fail; they usually are a capacitor and a resistor, one from each side of the line to chassis.

You could also have an internal short from primary of power transformer to case, not too likely. Measure (with everything unplugged) resistance from each prong of line plug to chassis. If you measure a low resistance, something has failed.

Hi, all!

Thanks for all the feedback. I heard pretty much what I'd expected; and
even caught an offer on a TM255A - which was a lot newer rig than I expected
to see sold. Like a few others, the present owner bought a '706, and wants
to unload the single-bander. A '706 or an FT-100 sound like great ideas,
but the HF is beyond my desires (April 15th notwithstanding!). The price
was pretty doggone good, so we're working out the shipping.
Then it's time for the yagi tripod to get re-arranged.
Thanks again!
Jimmy,
KC7BDP

318. Need: manual for Icom PS-35

Source record: 84178
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

I've used the older rigs. Personally, I prefer an analog dial. The FT-221R fits the bill nicely. Feel is like the Collins HF dial. Downside, of course, is the lack of digital readout. The -221R has the freq display jack, so I could use that.

"All mode" in my book includes AM. I use the AM mode for hunting down airport VHF beacons (known as VOR's). I suppose I could chase them using USB...

For the price, the older rigs suit me just fine.

I've also used the TS-700 and the IC-211. THe -211 loses VCO loop control too often, and my friends end up getting rid of their -221's.

For what it's worth...it all breaks down to how much $$ for the features a person wants to sell their house for.

325. Technical Exptertise needed for a Kenwood TS-430S

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-05 00:00:00 UTC
From: "Drayton L. Hanna" <drayton@eng.fiu.edu>
Message-ID: <38C32BB3.8713D4EE@eng.fiu.edu>
Source record: 84181

Greetings,

I have a Kenwood TS-430S here that seems to have a problem and I'm hoping that someone here might be able to give me a few pointers. First, if someone has a copy of the schematic/parts layout diagram of this rig that they can send me via e-mail (or tell me a site where I can download it myself) I'd greatly appreciate it.

After opening up the 430 I noticed that there are several "open" connectors on the various boards. I don't know the names of these boards, yet, so I'll describe their locations and the connector numbers.

Under the top cover there's a board numbered x48-1370-00/01 with connector #25 open, #s 6 & 25 have 1 out of 2 wires to the connector, #11 has a missing wire between the white & brown wires, and #18 is missing a wire between the yellow & violet wires.

On the Vox board (x41-147???), connector #19 is open.

Lifting up the tray to see what I've read is the control board??? (x53-1290-00), connector #29 is open, the switch just to the left of this connector is set to off, connector #28 (just behind the battery) has two of it's wires removed from the connector (gray & purple/white) and they have been taped at the ends to prevent shorting, connector #4 has two out of 3 wires in the connector (purple & yellow).

Under the bottom cover, the larger board (x44-1510-00), connector #s 6 & 20 and diode 68 are missing.

So far, these are the only anomalies I see, however, there could be more. Should any of these "missing" connectors be cause for concern?

To tell you about the operation of the rig... Receive works okay, no problems detected yet. Vox circuitry seems to be functional as I hear relays tripping when audio is fed into the mic and the rig "claims" to be transmitting. However, transmit power is in the dirt. With the mode set to CW or AM and carrier knob set to full, the meter on rig never moved from zero, and the rig only drew about 5 amps. I will try within the next day or so to use a proper dummy load to see if the problem stems from a possible mismatch. I'm willing to try additional test suggestions and any help or insight given will be greatly appreciated.

Drayton

Lumpy suggests -

Perhaps it is not the technology that evokes the flames,
but the messenger. The Fractenna guy is a real multi-
personality goofball. The slightest disagreement and
he threathens lawsuits. He's quite the focal point
on the antennas NG, which is perhaps just what he wants.

I've enjoyed playing with the 706 on 6m (I actually prefer it to my TS-60 and to the IC-575A that I had) and I have the 706MkII with the DSP module and I will try and play with it on 2 to see how it works. The downside, of course, is that the 706 can only do one band at a time - so it's either 6 or 2.

Well, I've had two Icom manuals on order for a long time now. The
one for the older IC-2350H has been over a year, perhaps almost two
years! The R2 manual has been on order for at least 6 months.
If Icom really wanted the manual revenue, you'd think they would
deliver the manuals so they'd get paid.

Meanwhile, some GPS manufacturers are doing exactly this. Both Garmin
and Eagle/Lowrance have most of their recent manuals available from their
web site, and have had for several years. It is useful in helping
to choose what to buy, as well as after sale. And it's certainly
something that would cause me to favour one manufacturer over another.

Dave

What are you planning on doing with the DMM ? General control wiring trouble shooting or do you plan on setting up instruments and doing things such as the control loops.

If just general 110 to 480 volt AC control and motor starters, just about any would work. If setting up instruments and dealing with the 4 to 20 ma loops and such, then you might wnat another modle. While the Fluke modles are high dollar units they work very well and hold up under some field conditions.

I work at a large industrial plant and have used several fo the Fluke modles. I also calibrate the instruments so I have dealt with everything from low voltage current loops to the 480 motor starters.

Seems like if I just want to do the motor starters I am always grabbing the old Simpson 260 analog meter..Some times those 'new fangled' DMMs will just not work to suit me in those circuits. They pick up too much induced voltage. When a bunch of wires are running in a single conduit there is enough induced voltage the dmm will pick it up where the old analog meters load it down enough to tell what is going on. Also some of the PLC and computer controlers have a surge supresser across the SCRs on the output and the dmms lie there also.

From: dlipson <dlipson@mediaone.net>
Message-ID: <38C2A8BE.820E5D14@mediaone.net>
Source record: 84323

Fellow Amateurs:

My Kenwood TS50s has just developed a strange intermittant loss of receive sensitivity in SSB. AM is ok, but switching back to SSB can give low , distorted , audio, and a poor S meter reading. Transmitter is fine. After some band switching , SSB will come back fine for the remainder of trip in the car.

Any suggestions before I send the unit back to Kenwood?

many thanks, 73's
David Lipson

I have forsale a complete Drake station consisting of a T4X,R4A,MS4 & AC4 power supply.I also have the original manuals and inter-connect cables.this is a nice looking station all but for some cutouts on the bottom cases near rear where the previous owner had rca and bnc jacks so he could run inverters and transverters. I have since removed and restored to original electrical condition. I have also removed front panels ,knobs and cleaned the vfo dials.they do look nice. I am asking $350 picked up in Phila. also when radios are next to each other on table you cannot see the cutouts,I do understand Drake still has bottom cases available. John w3ayt@arrl.net also, I may ship if I don't get a local buyer but would probably run about $40 u.p.s.

I have a question about interference, I have an new Yaesu FT-100 I have installed it in my 4x4, upon tuning & testing the SWR of the antennas (I have 2 on the truck)I came across a major problem. My stereo speakers give off ENORMOUS feedback making the radio un-useable !!!!!

I 2 Antennas @ 1.5:1 (HF) & 1.1:1 (VHF), the problem is my stereo speakers in the offroader almost explode when I key the microphone. Is there any explanations for this???? I have checked the radio and the antennas with various
different equipment in case mine was faulty, but the radio seems to be the most
perfect installation I have ever seen...

Does anyone remember how to make a lm317k 3 trmnl regulator
act as both a constant voltage regulator and/or a constant
current regulator. All I remember is that you put a toggle
switch so can take the output from either the ground trmnl
or throw it the other way and take output from normal 3rd
trmnl.

Kenwood TS-790 All Mode Transceiver - A combination of three high-performance all-mode transceivers rolled into one is the best way to describe the all new Kenwood TS-790A tri-band transceiver. 2 meters and 70 cm are built-in and with the UT-10 (1200 MHz) you have the ultimate in VHF/UHF communications. Power on 2 meters is 45 watts n FM or 35 watts on SSB. Power on 440 is 40 watts FM / 30 watts SSB. The TS-790A is the ideal radio for the serious satellite, moonbounce or grid square DX operator. Requires 12 VDC at 15 Amps.
http://www.ifip.com/K-TS-790.htm

For sale $1,450.

Icom 781 HF rig with built in tuner,built in scope,built in power
supply. 150Watts, Does full
power, I put it on a dummy load and it puts out 150 Watts. Comes
with Manual,Power Cord.
No original box and no mic comes with it. This rig works 100
percent
and the scope is nice and bright. The metal cabinet that goes around
it has a few touch ups on it.
The serial number is: 01779 As I stated, everything works
GREAT. Of course this would be double boxed
and packed well.

WAS: 2,675.00 NOW: 2,500.00 FIRM
Or trade for GM300 VHF and UHF Mobiles
of equal value or Spectra Mobiles VHF and UHF. Ham Gear,
Also looking for Collins Gear. Just let me know what you have.

Hi.

I just bought a used PK232 off of ebay and I was wondering if anyone had any suggestions about what software I should use or if there is any shareware available for this TNC? IS the AEA PK-Packratt the only one that will support this TNC? Does anyone have an older version they woudl want to sell me (legal only, please)

I have been out of radio for 7 years and am just getting back into it so I am not real familiar with the new modes out there. I do remember that I enjoyed Amtor and RTTY and I'd like to get back into them.

ANY help or suggestions would be appreciated. Off list is encouraged but I'll be checking here too!

Thanks,

Dave

The best I've ever used is the plain old Vibroplex Original Standard bug. Semiautomatic, keys anything, lasts durn near forever. Got mine new as an Xmas present in 1974. After a quarter century of hard use it's just about finished being broken in.

Big thing with bugs is knowing how to adjust 'em. They are almost NEVER adjusted right when displayed at hamfests, etc. A good explanation of how to set one up is given on the MEGS webpage:

http://www.joates.demon.co.uk/megs/

along with lots of other neat Morse stuff.

I figured it out... :-}

To remove a memory location ("entry") from a memory group ("MG"):

Enter MG mode and select the MG# of the group you want to remove an entry from. Select the memory location (within the MG) that you want to remove. (Here's the undocumented? part...) Hold down F/W for one second (the memory location number will start blinking and the alpha tag will disappear). Press MR(SKP)SC. The memory entry is now removed from the memory group. The transceiver will switch to the next entry in the group, or to the next group if there are no more entries remaining in the memory group (in which case, the memory group itself is "removed" and will not be offered when selecting the MG#).

diskussionsgruppsmeddelandet:sc3fm55vee698@corp.supernews.com...
> I keep coming back to the TR-751A as my prefered 2m mobile rig

Mee too!
When I was going to buy my first 2m rig, I decided that I wanted a all mode,
rather then some new "all gadgets" .

So I went to my local radioclub, and asked around what they used, and asked
them to bring their radios so I could try them.

(I think I had about 7 different radios to test)

Finally, I bought theTR-751, as I liked the sound and the no fuss handeling.

I recently tryed to operate a 706 on 2m, and I'm sure it preforms well, but
it might take a while to learn all the menu operating.

I'll use my TR-751 for ever, but I might get a 706 for hf use.

Message-ID: <89tr6n21f4u@enews1.newsguy.com>
Source record: 84184

I know this question has been asked but I still need help!

I am retiring from the Mechanical field and do know about general elect
AC/DC As well as trouble shooting.

But I am lost on what type of DMM to buy I know, It is my choice but the
problem is I have never heard of any of the acronyms on the FLUKE page. I
will be leaving the States in about 3 Months for Thailand and
mail order is not a good option with the mail in Thailand.

Could you please explain what I am looking for (at) in a DMM. Or Tell me
what you use what you like about it or don't like about and features you
would have liked to have on it.

OR If you're trusted DMM was lost what would you replace it with and why.

I know I'm asking a lot but please help a guy out feel free to E-mail me, or
Post Thanks for all of your help, Woff

Well...since no one has figured this out yet, I'll be so bold as to offer a summary.

There is almost no completely safe way to do business over the internet with private parties. You ARE TAKING A CHANCE both buying and selling. That's it. eBay is probably one of the safer ways due to the recording of feedback left by buyers and sellers about each other. I have had no bad deals on eBay, but had a very close call with a newsgroup listed piece of equipment. I almost lost $500. Bottom line is...if you don't feel comfortable buying or selling on a newsgroup, then don't. But don't get burned either way and post the fact you were suckered into a deal and it's someone else's fault. Own it and get over it.

wrote:

>I would more suspect AB2...
>--
>Gary - KJ6Q
>= = = = = = = =
never mind, and certainly not class C linear amp (as suggested above),
but the original questions still is:

wonder what is acceptable limit of grid current in a 2x 6146B
amplifier?
ALC voltage is often derived from varying grid current over bias
network resistors, usually around 10k resistance. 1mA grid current
will develop 10V voltage drop.

Coupled via a 0.002uF capacitor to a voltage doubling rectifier with
output loaded by 0.1uF (ALC circuit) will maximum give -0.2V
A feasable voltage, the ALC circuit may not have any real function at
all
I modified the FL-dx-500 and received very good reports for improving
readability, but it still seems that few mA grid current is within
acceptable limit of grid current for this sort of amplifier using 2x
6JS6A or 6146B

Seems that for 1000W linears fraction of 1mA grid current is too much
to avoid splatter, so an exciter with 1mA grid current isn't well for
the guy 10kHz up or down....

From: pablogutierrez@my-deja.com
Message-ID: <89v9fuvnj1@nnrp1.deja.com>
Source record: 84188

Specifically, I am looking for battery eliminators sources for various models of HT. My club has identified battery eliminators as a means to increase the usability of HTs. The battery eliminator prevents overcharging the radio battery when drawing from a cigarette lighter plug.

Some have mobiles but for the HTs power is crucial.

Interesting!

I would say that removing the diode *would* add the SF function (variable offset function) except that I think that the SF radio was released significantly after the original AH-50. In fact, the manual states "The most frequently asked for improvement was variable offsets..." Anyway- give it a shot, I added a diode and nothing happened. I'd presume removing it wouldnt do anything either.

Do you also have the line of four 2-conductor solder pads? They are just to the right of the contacts for the F (function) and light keys. In fact they share some of the same PCB traces. I've bridged all of them and nothing seems to have happened...

Let me know
Thanks!

No, there's nothing to indicate that the battery is charging or charged.
The internal charger in the radio is a simple constant-current type.

Dave

One more point. If you get a COD package, you won't know what's in it until you open it and you can't open it until you pay for it. It could be filled with bricks.

That's why there is such a thing as escrow for major purchases. Perhaps it would be a good idea to start an escrow company for online deals. It would be more expensive but at least there would be a better chance of neither party getting cheated.

Yes, that is correct. You push it briefly and select the memory you want cleared, then briefly again, then push it in and hold it for 1 sec or longer. It will clear the mem. It will not clear scan edges or the call channel.

Randall Buxton wrote in message ...

I have for sale in excellent condition a MFJ-989C Versa Tuner V roller inductor antenna tuner.....It has cross needle meter lets you simultaneously read peak or average power, reflected power and SWR in two ranges......The Hi range is 2KW forward and 500w reflected......The LO range is 200w forward and 50 w reflected......No SWR sensitivity adjustment is needed to read SWR.....I have the manual for it and will take $200 plus shipping.........I can be reached at (508) 821-2993 or e-mail..........WZ1U Steve / Lakeville, Ma.

441. TS 820 PA Board

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-06 00:00:00 UTC
From: John Hewett <johew@globalnet.co.uk>
Message-ID: <8a1eimsqj1@gxsn.com>
Source record: 84215

I'm getting desperate to get my TS820 going before the end of the millennium!!

The cathode resistors on the Final Board (X56-1200-00) burnt out taking with them a couple of the disc capacitors. I have tried all the usual (and some of the unusual) sources but have come up against several brick walls.

The capacitors are 47,000 pF disks but I'm not sure what kind of voltage is involved.

Can anyone guide me as to alternative replacements such as other different types of construction?

I replaced the resistors (10 ohm, 1W) with carbon film instead of the original carbon compound so I am hoping that they be OK.

John G4SVE

Sorry, guys, but if someone had set up a rec.radio.amateur.swap then maybe you would have nothing to bitch about. Rec.radio.swap is just too generic to be useful. Personally, I like seeing the boatanchor ads in the boatanchor group, antennas for sale in the antenna group, and other equipment in the eqipment group. Notice a pattern?

No one is forcing you to read the ads.

446. Re: PUT MANUALS ONLINE !!!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-06 00:00:00 UTC
From: johng@comm.mot.com
Message-ID: <johng-ya02408000R0603001749140001@nntp.cig.mot.com>
Source record: 84220

I recently sent an email to ICOM asking where I could find a PDF copy of a manual for an HF radio. I got a nice reply from ICOM suggesting that I purchase the manual for $44 from their parts department. Given that I am comparing several models of HF radio prior to purchase, this doesn't make much sense. With Kenwood's manuals on-line, I will be much more familiar with new Kenwood HF equipment when I make my purchase decision and buy my new HF radio. ICOM should decide if they would rather make their money on $44 manuals or on $1500 HF radios.

Dave:
What to look for in a S/W (Quoted From Passport to World Band radio) plus some other stuff.

- Double Reduction heterodyne receiver (cuts WAY down on distortion, interference & noise)
- Digital Tuning , programmable channel memories (a Big plus)
- up/down tuning via slew keys or knob

- Synchronous selectable sideband (used correctly, can minimize fadeing distortion
and ajacent channel interference.

- Sensitivity to weak signals (enhanced by a random wire (long- 30 - 70 feet) antenna
- Good Selectivity (effective ajacent channel rejection; a pre selector can help with this)
- easy to use (ergonomics, can someone in the store show you how it works..)

- 24 hr clock
- AC adaptor
- Headphone outlet (Saves on Batteries, imprives sound quality)

I got a Sangean 606A from C Crane a few years ago & was able to receive all then news from BBC while overseas.
Have had success receiving Korea, Thialand, New Zealand, Africa, & all over europe, all using an external antenna;
I think the people who have 909 Sangeans can use Single Sideband (which the 606A doesn't have) to help clarify weak signals, but I've done pretty well with this very small set & an external antenna.

ICT Power Converter Features:

vibration resistant
moisture resistant
rugged case
fuse protection
over voltage protection
current limiting
terminal block connection
high efficiency
no internal wiring

-NEW IN THE BOX !

-Model ITC2412-15A

-INPUT VOLTAGE 10-30VDC

-OUTPUT VOLTAGE 13.8VDC +-300mV

-15 AMPS

The ICT 24-12
Industrial Power Series provides you with continuous, trouble-free
power.
Each converter is designed for high efficiency and long service life.

The heavy duty case and modular design have proven durable in harsh
environments.
Standard features include: easy access mounting holes, a terminal block
connector,
current
limiting, over voltage protection, and a high surge capacity.

I have had plenty of bad deals on Ebay! I bought a watch from a guy with a feedback rating of over 300 (that is alot). The watch didn't work properly and looked used when it was supposed to be new. The seller was very uncooperative and actually told me he couldn't do anything about it even though he stated a 1 year guarantee! Ebay was also less than helpful when I contacted them regarding the seller and replied with a form letter suggesting various courses of action. I have purchased tubes on Ebay as well which were represented to be in much better condition then they actually were. How is Ebay safe if they take no action on the buyers behalf? If you get ripped of on the NG there is always the Postmaster and Mail Fraud which they persue quite agressively.

Jose,

Good work, this vco5 is quite pesky...
Dont forget to pot the parts with some hot glue when you
are done to reduce oscillations in this circuit...

Also, you might check VCO1 for the glue garbage, you'll
need to do that area sooner or later...

Keep posting. It's nice to read your progress.

Hi Gang,

This is an estate item from a silent key. I'm helping his widow sell it.

FS: BC-610F +BC-614 Speech amp. Also includes HB speech amp and RF driver with BRAND NEW 250TH tube in the final and two BRAND NEW 2A3s in the rig. Has dow key relay and low pass filter and the little Collins VFO. Also includes D-104 mike. It has all new caps in the speech amp and PTT added. Also included is the Viking 122 VFO and it's Swan power supply. He used the Collins VFO on 160 meters and the Viking 122 VFO on 80 and 40 meters. I'm not too familiar with this equipment but it is in working condition. I witnessed it in operation shortly before the late owner passed away. It is all in good condition considering its age and sold as is. These are pickup only. I am located in central Iowa. Asking price is $875 and I will not separate the equipment. For an extra $100 I'll throw in two NOS 250s and two used 2A3s. You can reach me at 515-669-7501 from 08:00 to 19:00 Central time. Of course email is OK too. Thanks and 73,

Al

Hello, I have a yaesu FT-2500m VHF transceiver.
I am attempting to use a repeater with a very odd offset. The
input frequency is 1.035 Mhz lower than the output frequency.

According to my Yaesu FT-2500, I can do "non standard" repeater
splits, as long as they are in 50 Khz increments. Not exactly
"non standard"....

So, how does one program this radio to transmit with a 1.035 Mhz
offset? Or should I sell this one to get a different rig that
will program to the unique offsets?

thanks,
Joe

I am trying to clear a memory channel without luck (using the instructions on page 30 of the manual.) Are the directions in the manual incorrect? Kind of confusing,,,, push the S/MW button "monentarily" then "briefly" then for "1 second",,,, huh!?

Thanks in advance for help.

A point, I think, everyone has failed to note here is the purpose of the communications. If Matthew is looking for any type of business communications, he needs to use business band or CB (class A on 450 MHz thru a repeater would work great). If he only want to keep in touch with his friend, ham radio is great, providing they both have licenses.

I have an ICOM 2100 and use a repeater with a non standard offset. What I do is subtract the repeater input freq from the repeater output freq and then set the offset freq to that number.

I remember when I could find stuff actually for sale on this newsgroup.

NOW, I see people post stuff they have listed on e-bay. If I wanted to shop by auction on e-bay that's where I would have looked in the first place.

If it isn't for sale - meaning I can't reply to you, agree to pay your asking price and actually purchase the item from you - then please don't list it on the Newsgroup as F.S.

470. FT-90 Modifications Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-06 00:00:00 UTC
From: "Donald Mascarella, Jr." <rps300@core.com>
Message-ID: <lJIw4.957$BZ3.41380@news.corecomm.net>
Source record: 84258

I just modified my new Yaesu FT-90R for out of band transmit by removing R2156 from the PCB, and performing a master reset.

While the modification was a success, I now am unable to read or program my radio with the Yaesu ADMS-2E software and cable. It worked BEFORE the modification.

Anyone out there had a similar experience or any ideas?

Thanks! -Don KA9RXK

471. telegraph key manufacturers?

I am looking for a new or newish and pretty cheap (say $30 or so)
telegraph key. I am not a radio guy but I noticed that you guys use
these things. Are telegraph keys still being made? If so, can anyone
point me to a supplier? Any recommendations on a good sturdy fast key?
Do they even vary much in quality? Used ones are OK I guess, but I don't
want any collector's item. (I tend to buy used cars, just because they
are better value than new, not because I am any sort of collector!)

I did a web search and all I could find were zillions of people who
collect old keys. No hits on people who actually use or make the keys.

Thanks very much for any help.

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

If you had a list of HTs that you were working with, that would be more
helpful...

You've found some dealers already - they are all fine. Contact them and
see if your "wish list" is in stock, or if any have to be back-ordered.
That would be about the only "delay" in working with any of them.

If the second one is only lasting a couple of hours on receive, then you might need to replace the charger. That is weird.

I have not heard of any "massive" problems with the batteries. It's a very common battery size/configuration...with several suppliers of NiMH and NiCad packs out there.

> ...15 miles from a 500 ft high repeater...will NOT trigger it...

Well, if the unit is never getting a fully-charged battery, it might not "hit" anything...

Ask your dealer to replace the charger - if your 2nd battery exhibits the same problems.

Did you purchase the HT new?

Sounds like grounding to me.

Make sure you have a short thick braid strap bonding the body of the
FT-100 (mounting screws) to the body of the vehicle.

Do the same ting with the base of your antennas and I reckon all will
be sweet.

Any HF radio in a mobile shack needs to be well grounded.

Get the Icom 706 G. The FT-100 is still pagued by reliability problems due to design and manufacturing. If you like sending the radio back and forth to Yaesu (like hot potato) then get the FT-100.

Who do you think pays for it? It is efficiently taken out of our paychecks
and we have little to say about it.

But it is a complex issue - each side has perfectly valid points so I'm not
exactly sure how to change things without causing a worse problem.

oN <NOSPAM@EUNET.YU> wrote in message news:89vkshkkj1@SOLAIR2.EUnet.yu...
Yes. We need brand new UFO-s!
By the way: Who pays for this sheets: arms, bombs, planes, guns...
Can't we do anything better with all this energy and the money?

I have an FT-100 in my Jeep and the factory stereo works fine when I transmit. I'd say it's the installation. Maybe improperly shielded equipment or a poor ground.
Home stereo's are subject to this from nearby transmitters (house next door) all the time and it's almost always the stereo that's the problem. I'd try ferrite chokes on all leads and short solid ground connections to start.
Sounds like a tough problem, good luck.
Steve AI7W
(BTW you know that its illegal to transmit music over the ham bands, even in the background).

I can remember when people followed the group charters and kept the
for sale stuff on rec.radio.swap where it belongs. All of the rec.radio
groups *except* swap are supposed to be *discussion* groups, not
places to advertise items for sale.

Rec.radio.swap is supposed to be the sole place where radio related
for sale, wanted, and swap items are to be posted. Pointers to ebay
auctions aren't welcome on *any* of the usenet groups. Ebay has quite
sufficient search utilities for those interested in auctions, so there is
no excuse for posting auction URLs elsewhere.

If the Stereo is an after-market installation, I'd try putting some ferrite toroid chokes on the speaker leads... as close to the stereo as possible, If you're using an audio amp, the problem may be a lot tuffer to solve.. you could try putting toroids at the amp speaker leads as well.

If you use an audio amp, try turning it off... Problem still there? Try putting chokes on the Stereo's output leads and possibly a choke/filter on the DC line feeding it.. If the problem is only with Audio amp on... put chokes on amp audio input leads and possibly the DC line (close to amp) Try again, problem still there? Try adding chokes to amp output leads as well. Try again.. Problem still there?.... I give up :-)

497. E.H.Scott SW Radio schmatic/manual?

I have an old E.H.Scott LW/SW radio. It covers both long wave and short wave, but no medium wave. I don't know the model, the plate is missing but it is definitely a E.H.Scott by the patent plate. It stopped working and I isolated to the IF section. It covers 455KHz so the IF can't be 455KHz.

Questions,

1 What model is this?
2 What is the IF? It seems to be about 540KHz.
3 Is there any schematics or manuals and where?
4 Are there any bulletin boards to obtain unique parts?

Many thanks in advance

Dennis

Complex issue it is and we were stupid to get involved. It's in
Europe's back yard and it's time for them to start paying for their
own defense. They've been dependent upon us since WWII. They've
fully recovered now, so it's time for them to start paying their own
way both in money and lives. Excellent article at:

Randall,
The word "momentarily" IS confusing. I went through this myself. The first time you push the S/MW button, push it and release it very quickly. Then hold it for a second or so and the memory channel should clear. If you have the audible beeps on it makes it a little easier.

To each there own. If you want to do satellite work or weak signal VHF/UHF, the 847 is way more capable. If you are interested in mostly H.F., out of the box, the 746 would probably be a better choice.

Briefly means to just touch but not hold the button, then almost
immediately press it again for 1 second. Sort of like sending the
letter " A " at 5 wpm CW on a push button.

You first MUST be in VFO mode.
Touch S.MW to get the flashing memory channel indication
Choose the desired memory channel to delete with the tuning knob
Briefly touch S.MW and then press it for one second

Well thanks a lot all I have located the problem, it seems the Amplfier was no correctly insulated, It took nearly an hour to find the amp, but once I did I removed the rear speakers ans voila!!! I am back on the air again..

Once again thanks to all..

Hi folks!
Couple weeks ago I'd bought Autek RF1 & RF5 for very reasonable price.
RF5 had some defects but now all OK. Unfortunately both units was
supplied without User Manuals.
I would be very obligated if somebody can supply me of manual's
electronic copy.
Another question - I need the schematic for Ameritron QSK-5. On the
website of manufacturer I'd find instruction only.
Thank you in advance,
Igor Dobrokhotov UN7GM

Better yet why not just find the email address of the radio
manufacturers and send them a "POLITE" email telling them how much
you appreciate Kenwood for placing their manuals online and ask
if they would do it also. Most companys want to do what the customer
wants (if it will sell their product better) so if they know we want
it maybe they will provide online manuals.

Besides, if they don't do it what have you lost?

Hi,
Looking for the GE Mastr II UHF transceivers. "Painted handle"
versions for repeater conversion. Can not be the UHF "executive" series.
Must be the bigger case Mastr II UHF.

Send me the model number and your asking price. Dont bother if the
stuff is not working perfectly. I need good working units (3 or 4, but
will buy what ever you have).

Model number examples:
MC75AAS78C
MC55AAS78A
MC65AAS78C

thanks,
Joe

526. WTB: your old handheld batt-op LED calculator!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-07 00:00:00 UTC
From: floetay@aol.com
Message-ID: <20000307122008.02106.00000552@ng-fz1.aol.com>
Source record: 84114

Here's what I'm looking for: handheld-type battery-operated calculators, mostly the LED-type calcs from the 1970s, the ones with the reddish, blackish screens, often with glowing red numbers, as opposed to those you see most often today, with their typically grayish LCD screens (except for HPs -- love em w/ any screen!). I'm looking for all makes, all models, as long as they work and are cosmetically clean -- see partial list below. (The only calcs I don't care for are those made by Texas Instruments.) Anyway, if you've got the old manuals, cases, chargers, so much the better. Just drop me an email (floetay@aol.com) and let me know what you have and the condition it's in, and we can go from there. Thanks!

Calcs I'm interested in include, but are not limitted to those made by: Hewlett Packard (all models, both LED and LCD), Adler, American, APF, Apollo, Aries, Aristo, Berkey, Brother, Busicom, Caltronic, Candle, Citizen, Colex, Columbia, Corvus, Craig, Crown, Dataking, Decimo, Dictaphone, Digicomp, Dixon, Edmund, Enterprex, Facit, General, GIC, Hanimex, Hermes, Iain Jones, Ibico, JC Penneys, Kingspoint, Litton, Logitech, MBO, MITS, Master, Melcor, Mintron, Monroe, Omron, Ordibel, Panasonic, Pico, Pye, Ragen, RBM, Regan, RFT, Ricoh, Royal, Samsung, Sanyo, Sears, Sinclair, Spectrum, Sperry, Summit, TKS, Toshiba, Universal Data, Verax, Victor.
Good golly -- can you believe there were once about 220 brand-names in all?

Source record: 84118

Hello All,

I have the MFJ 9402 for 2M SSB. It's a great little rig, but the analog dial makes it difficult to duplicate returning to a given frequency, even the calling frequency at 144.2MHZ unless there's traffic there.

Anyone got a lead on a good digital freq readout that could be adapted to this rig?

Direct E Mail replies welcomed.

Steve,

Do you have a digital frequency counter in your shack? You could
couple off some of the VFO signal, bring it out to a test point
jack mounted on the rear panel, and monitor the VFO frequency with
your counter, and just correlate the counter reading to the rig's
operating frequency. Crude, but effective.

Joe, those larger cases are called the "E" case. Just in case someone
tells you they have an E Case... I have had 3 of the UHF GE Master
II's on my 444.700. I ended up with a smaller case with external RX-TX
Duplexers and an internal NHRC-3/M2 Controller that just plugs in the
front of the Master II's.
Good Luck, if I find some at our Little Rock, AR Hamfest I will let
you know..I like your swap page, check in to my little Ham Trader Swap
Page every once in a while.

Looks like you are in luck. I found a copy in my stacks. The article I see is for a wide range transmatch written by Lew McCoy. They quote the power handling as 500 watts cw or ssb, and half that for am. Does this sound like the correct tuner? I can scan the article later on and send you a copy. I'll need to run over to a friends house that has a scanner. I don't have one here. Also Lew McCoy hangs out on the antenna group quite a bit. You could probably get some info from him also if he remembers the article. MK

From: Chris Davis <chris@spiritandbride1.com>
Message-ID: <E9fx4.4828$413.74828@zombie.newscene.com>
Source record: 84132

My son's Kenwood TH-79A has a problem with the LCD display:
It occasionally will appear to 'dim' or sometimes fail completely. It looked like the display was not getting sufficient power, BUT, if I hold 'F' and turn the unit on (the reset procedure), all LCD segments are clearly 'illuminated'.

The only remedy I have found is to disassemble the radio and poke around on the circuit board behind the LCD panel with my finger. After enough poking, it will work fine for a few weeks to a few months. This problem apparently has no effect on any of the radio's other functions. I assume it's an intermittent connection, but I cannot seem to determine the exact location, as it appears to change each time I open the radio!

Has anyone else had this problem?

545. Re: FT-101ZD mods?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-07 00:00:00 UTC
From: Mike Sanders <k0az@swbell.net>
Message-ID: <38C5894A.1F9D3334@swbell.net>
Source record: 84133
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

The 101ZD has one of the quietest IF chains around. Does not suffer from poor sensitivity, overload or any other poor performance I can think of. The noise blanker which is front panel adjustable WORKS. Smooth clean audio and just simply a terrific receiver. The ZD is nothing like the earlier
101s and was one of the best kept secrets in ham radio regarding it's performance. The later Mark II and Mark III had upgrades including the warc bands and the ability to include a board for AM OR FM but not both at the same time. The APF audio peak filter and audio notch filter really works. The rig comes standard with cascaded crystal filters I believe and there was an optional (600hz ??) CW filter available.

Sometimes the push buttons would oxidize on these radios and cause freq drift etc. Simply pushing and activating the various buttons from time to time would "fix" this. If memory serves the VFO select and RIT buttons would cause this problem. No big deal though.

Basically I do not know why anyone would want to modify a ZD. They are fine radios and totally underated and discounted by the masses.

Congrats and good luck. You have a nice rig. 73, Mike K0AZ

Do a search for Almost All Digital Electronics. They make an adaptive digital display where you can program in the IF so it is electronicaly added to the L.O. to display actual op freq.

Have for sale the following multimode vhf radios:

A FT690 R - Mk II 6 meter multimode in good condition - comes complete with a 10 watt clip on amplifier and the optional battery pack for self contained operation (do not have the nicads for it, but believe that I also have the charger for the pattery pack) plus manual and original box. Price is $360 plus shipping from 99516.

A FT290 R - Mk II 2 meter multimode in very good condition - comes complete with a 25 watt clip on amplifier and the optional battery pack for self contained operation (do not have the nicads for it, but believe that I also have the charger for the pattery pack also) plus manual and original box. Price is $360 plus shipping from 99516.

These are both very nice portable 2/6 meter multimodes good for ssb, cw and FM - do not have the optional ctcss module but it is still availabe through dealers. Thanks in advance. If intersted, drop me a note.

Source record: 84232
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I'm awaiting delivery of a new-to-me Yaesu FT-101ZD, and am wondering what sources may be available for upgrading this rig, especially in regards to receiver sensitivity on the upper bands, as well as reducing internal noise floor. The 101E I owned years ago was GREATLY improved by a better grade solid state device (RCA) in the first RF stage, as well as the first and second IF - I assuming the 101ZD might also benefit from a similar mod if one is available?

Would appreciate any pointers - wonder if "FoxTango" is still in operation?

559. FT-847 vs. IC-746 THANKS all!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-07 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <38c47547.44353135@news.swbell.net>
Source record: 84237

Hello,

To all those who anwered my posting, I bid them THANKS!
For the most part, the Icom IC-746 ruled.

The reason was due to its performance on HF. The FT-847 does lack
some performance on HF, but is great for satellites. I am not ready
for satellites again. When I am ready, I will put up an antenna farm.
So, until then, I think I will use the IC-746.

I would like an all-around rig, that performs nicely on HF.

Again, thanks to all that helped!

73,

Mike KQ6MU

Source record: 84238

I agree, all the .04 uf caps and the two 10 ohm resistors are in parallel and between cathodes and ground. the IP current rarely exceeds 300 ma. so the DC voltage is going to be low. granted there is RF flowing thru the caps but I think the cap's failed after the resistors failed in the open condition and allowed DC voltage to soar to aprox 900 volts (plate voltage). I would doubt DC + RF voltage across them to exceed 25 to 50 volts in normal conditions. (probably less than 5)
Go for it!!

Gary I don't have a lot of mod info but want to say there is no comparison in design between the 101Z and the 101E the 101Z is about equal to the 901DM / 902DM modular construction w/ plug-in bds. Rx fet probably can ve up-dated and I expect a change of the mixer would be a fb idea also. The noise floor is the killer as we know, mixer noise needs to be very low. I used to own 901 & 902 excellent radios. gl 73 Al k2spo

Hmmmm,,,, what I want to do is COMPLETELY erase a channel. As an example-
say I have programmed memory channels 37 through 50. Now I want to delete
all of 'em so that when I scan all my memory channels the radio only scans
channels 1 through 36.

I have been able to completely erase a channel so that the channel number no
longer displays until it is reprogrammed but I can't figure out the correct
length of time to hold the S/MW button down. Momentarily, briefly, 1
second. What's the difference?

: Before you buy.

One hint...you may to reset the CPU whan you rejumper the radio...if it is like the AH100..you have to put a jumper across the battery contacts overnight.
Take the battery OFF first, of course!

It's quite possible, that unless you do the above, the jumpers will be ignored..the CPU probably only looks at them upon a CPU reset.

>
>C'Mon guys! Get with it!

Surf on over to:

http://www.elecraft.com

and check out their online manual. Not scanned in. You can download the whole thing and examine it BEFORE you buy! And their manual is more complete than anything I've seen for ham gear.

Now if the rest would just follow that lead...

Hello!

Yeah- when I did the AH-100 mod, I tried to get it to work right away
and it didn't. I was dissapointed but I left a alligator clip jumper on
the terminals overnight and the next day it worked...

In the manual for the AH50 they actually state that a microprocessor
reset (in case of a lock-up) can be achieved my momentarily shorting
the batt terminals ('with a coin' they say:)

I tried this after doing the 'mods' and still nothing happened...

Still looking for AH50 mod info if anyone has it :(

Sorry, Don, but some questions just don't have answers. Figure out the most money you can spend; listen to as many radios as you can; talk to real people about their actual experience with different radios; and then figure out the best for you. I am not trying to put you down or flame you, but some things really can't be found out from the Net. All you end up with assorted opinions from folks you never heard of before, including me.

Hope you find a good one, and welcome to amateur radio!

Looking to trade:
1 Motorola Micor Tested Working W/ Control Head (Freuency Counter showed 800 mhz.)
1 Motorola Pulsar Tested Working W/ Control Head (Frequency Counter showed 150 mhz.)
2 Motorola Motracs Unknown Frequency Untested No Control Head

I was going to convert the 2 first ones for repeater use, but didnt want to attempt it in case I blow them up. So I will trade all 4 radios for a working Converted for Repeater use GE Master II or Motorola Micor on either 2 meters or 220mhz amateur bands ready to use, Controller Ready....

The Micor and Pulsar look in good shape and are working. The Motracs are ugly and untested because there is no control heads.

Here is the info for the radios:

Motorola Micor:
FCC XMTR DATA: CC5010
FCC RCVR DATA: RC0071
MODEL #: T45RTA6B00AA
SERIAL #: 439CDS1200

Motorola Pulsar
MODEL: T1776A
RCVR: RC0047
FCC TYPE: CC3225
SERIAL: RR6210

Motorola Motrac #1:
MODEL: U43HHT-11300
TRANS TYPE: CC3009
SERIAL#: E-14787

Motorola Motrac #2:
MODEL: T43MHT-1190C
TRANS TYPE: CC3059
CABLE TYPE: 2
SERIAL#: Not Visible

I would prefer a local trade (Redding, CA.) but will ship in the US.

Hi Dave ,
I had a ICOM T2H for awhile and I can tell you some likes and dislikes about it ...
Likes : Nice , solid feel when held in the hand . Exceptional audio from the built-in speaker and very good transmit reports from other hams. I really liked the extended recieve capability of the unit (which nearly all ht's are capable now). Also has plenty of memory for freqs.
Dislikes: The instruction manual was horrible! Icom could have spent more time writing and illustrating the manual . The other major gripe that I had with the rig (and the biggest reason I parted with it)is the fact that the radio cannot be powered from an external power source . If the batteries are dead , you are done! Unless of course you're toting 8 aa cells on your person . Otherwise it is a fine radio that had some shortcomings in my opinion .

I was thinking of getting the Outbacker Outreach antenna when I upgrade and was wondering if anyone out here has had any experience with this antenna?? Please email me at: N9YLN@aol.com and let me know what you think of the antenna, how it worked for you, etc. Thanks!
73,
Renee N9YLN

589. Re: FT-847 vs. IC-746 THANKS all!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-08 00:00:00 UTC
From: Christopher Cox <cobox@urec.net>
Message-ID: <01bf88fe$cef078c0$8f7f473f@cbx-nt>
Source record: 84067

Hi John,

I have seen the numbers, and indeed I have to agree that my little IC706 does have more dynamic range than my FT847, it is really noticeable on H.F. BUT the FT847 hears grass grow on 2 meters and certainly hears more on 440 than the IC746 ever could.

The FT847 is full duplex, a real plus if you are interested in doing any satellite work.
The FT847 also has all the connections ready for 1200/9600 Packet / PSK, along with a honest RS232 interface, no need for a level converter.

To paraphrase someone, the FT847 is a great for working satellites, a capable radio for weak signal VHF/UHF work, and a mediocre H.F. rig.

BTW a pair of Inrad filters goes along way in improving the FT847's H.F. capabilities.

Purchase for your needs, engineer for success.

591. Ranger RCI-2950 replacement parts

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-08 00:00:00 UTC
From: "Jacek M. Holeczek" <holeczek@us.edu.pl>
Message-ID: <Pine.GSO.3.96.1000308153129.580A-100000@uranos.cto.us.edu.pl>
Source record: 84069

Hi,
I think I need to buy some replacement parts, but I cannot find any place where. Could someone, please, direct me to the correct place ? I tried to write to rci@rangerusa.com, but I've got no reply.
I am thinking about the whole CPU board (so that I don't have to resolder the IC601), but if it costs much more then the IC601 itself, I will buy only the chip itself.
A brief description of my problem follows.
I've got my hands on a used Ranger
RCI-2950. There are three problems with it :
1. sometimes when I press a button like "SHF" (or "LOCK"), instead of the required function to be performed a frequency change happens like I had pushed the up-down arrow. Is there a known fix for it ?
(I saw a "fix" to lower the R611 from 47k to 10k, but in my ranger it is already 6.8k, then another fix to increase the C621 - directly connected to R611 and the CPU-pin-16 - to 100nF, which I did, I increased it to some 500nF, but it doesn't help)
2. the frequency knob above the mic plug does not work AT ALL (both the up-down arrows and the buttons on the mic DO work)
3. The battery was dead, so I replaced the internal 3V battery, but I noticed something drains it. After two/three days off it was again dead.
I took some tests and ...
The whole CPU related logic is divided across two boards. One with the CPU itself (marked as IC601) and the battery, the other one with another big chip (marked as IC701) and the LCD display. If I remove the "display"-board, the battery immediately behaves fine. The problem that something drains the battery is then related to IC701 - and this in turn is related to pin 2 of this chip which gets the battery voltage all the time.
I think now that the IC601 is slightly broken.
As I have already written the problem lies in pin 2 of the IC701, which is called "READY", which gets almost the whole voltage that the battery is giving. I guess this input is "protected" against input voltages higher then the VCC via some kind of an internal diode, and this (internal to IC701) diode "delivers" the incoming voltage to VCC (which should be 0V when the receiver is off), and that means to all other parts, for example to R611/C621/CPU-pin-16 where the voltage is about 1.4V (I don't remember now) - this drains the battery then. IC701's pin 2 gets the voltage from the IC601 pin 48 ("D0"). I guess there should be NO voltage at all

when the radio is off. To be sure I would need to get my hands on a working RCI2950 and measure voltages when it's off.
Additionally, if you look at the schematics you can find that the frequency knob, which is not functioning at all, is connected to pins 50 ("D2") and 51 ("D3") of IC601. They also have voltages (slightly less then the one on the pin 48) measured when the radio is off (btw. these two lines should be inputs ?, but when the radio is on they have almost the same voltages as the VCC). I guess then that the IC601 has some lines broken in range D0-D3.
Again, to be sure I would need to get my hands on a working RCI2950 and measure voltages on these lines when it's off (and on :-). I would be very happy if someone from you could measure these voltages for me ...
Thanks in advance,
Jacek.

I was wondering if is there any decoding software for RTTY, and so on,
to be used with a simple serial interface, instead of buying something
like Wavecom cards, which are honestly expensive...
I can't believe there is no software better than Hamcomm...
Please let me know of any package you know about.
Email please

Cheryl at Kantronics wanted me to pass this latest closeout to the group.

The 9612p add on board adds a 3rd port to your dual port 9612P. This will allow you to have either a extra 1200 or 9600 baud port on your 9612P.

Kantronics is closing them out at the following prices:

1200 baud - $59.00
9600 baud - $79.00

This includes the add on board, new panels and case top. Another great close out deal for the Kantronics users. There is a limited quanity, so it's first come, first serve.

The GPS Trackers were gone in two hours, so best to get your order in early.

Kantronics can be contacted at:

sales@kantronics.com or 785-842-7745

607. Wilcox 96D Transmitter for sale

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-08 00:00:00 UTC
From: Chris <ck5@ix.netcom.com>
Message-ID: <38C710F8.182B@ix.netcom.com>

I have a Wilcox 96D transmitter for sale. 1953 built. This is the one
with the works in a drawer slide out cabinet. Tall and narrow.
Has two 250THs in it now but two 450THs can be used. Excellent design
with large Jennings Vac variable. No power supply. I need the space!
It is in very nice condition. It's small enough to fit in any shack,
It's only 12" wide X 6'H. Covers 160-20M
I have JPGs on request.
$650 pick up or you crate from FtLauderdale Florida.
Chris 73 VE3NGW/W4 Florida

ICOM

IC-746

100 watts on HF, 6 meters AND 2 meters!

NEW IN THE BOX !

IC-746

WOW! 100 watts on HF, 6 meters AND 2 meters! IF-DSP, too!

Dimensions: 11.3 (W) x 4.7 (H) x 12.5 (D); 19 lb, 10 oz
HF + 6 Meters + 2 Meters
All Mode, Including RTTY (FSK and AFSK) and PSK31
5-100 Variable Watts of Power (5-40 W on AM) on All Bands, Including 2 Meters
Fast, Built-In Automatic Antenna Tuner for HF and 6 Meters
3 Antenna Connectors
IF-DSP with Noise Reduction
IF-DSP Auto Notch Filter
Selectable DSP Audio Peak Filter (320/160/80 Hz)
Noise Blanker
Concentrated Information Dot Matrix LCD Display with Soft Key Controls
Spectrum Scope
Quadruple Conversion Superheterodyne for SSB, CW, AM, RTTY, Triple for FM
Twin Passband Tuning (PBT)
Triple Band Stacking Register
2 Step Preamplifier -- great for weak signal work on VHF. Single stage on 2 meters
10 "Memo Pad" Memories. Easy, powerful feature, great for contesters and DX'ers
Noise Blanker
3 Optional Filter Slots -- 2 for 9 MHz and 1 for 455kHz, front panel selectable
With the 4 filters that come as standard equipment, get up to a total of 7 filters
Speech Compressor
Tone Squelch
Tone Scan
VOX
SmarTuneTM Tuning
Automatically senses how fast you want to tune by how fast the knob is turned
Digital Metering

Measures 3 parameters, all at once
Auto Repeater Duplex Setting for 2, 6, and 10 Meters
Quick Split
CW Pitch Control
Semi and Full Break-In (QSK)
Memory Keyer with 4 Built-In Memories
Includes QSO serial number generator with count-up feature (incrementing
the QSO
number with each contact)
and auto-repeat message
Optional CT-17 level converter for PC programming
FM Narrow Capability
Transmit Audio Monitor
Durable, Continuous Duty Cycle Transmitter
Built-In Carrying Handle and Side Feet

THIS RADIO IS NEW IN THE BOX !

Hello,
Has anyone attempted and/or succeeded in the following: This would be a remote based system and not at the repeater site...

We would like to have .wav(or sound files, not necessarily in wav format) files stored in a computer and be played on an hourly/ designated basis from a remote location and transmitted on our repeater input. This would be timer based and not be keyed by an individual. I'll deal with the ID/remote control station issues later. We are looking for some type of programming (basic or otherwise) which would key the radio, play the sound file and hibernate until the next designated time. Any suggestions on existing software, manuals, kits, websites, etc. would be great. We have looked at voice ID'ers for the system, however we would prefer not to go that route.

Any and all help is greatly appreciated.

617. Kenwood items FS

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-08 00:00:00 UTC
From: Ken Simpson <W8EK@fdt.net>
Message-ID: <M0hx4.10901$JQ.658813@monger.newsread.com>
Source record: 84142

For Sale:

Mobile power cord for most Kenwood and Icom HF rigs.
This one has the heavy 6 pin plug, and is 6 or 8 feet long.
$ 18

Mobile power cord for ????. This one has a Molex type
connector, with 4 pins in a single row. These are the
"standard" size Molex pins. I don't remember what rig
it fit, but I think it will fit several Kenwood / Icom rigs.
Both positive and negative are fused. Wire appears
to be about #16. never used $ 8

Kenwood TH-21 AT, 2 meter HT. Small size, about the
size of a pack of cigarettes. Fully synthesized with
thumbwheel frequency selection. A very good performer.
This one is in great shape, and includes a very good battery,
charger, rubber duck, and both operating and service
manuals for $100.

Kenwood BC-6 fast desk charger. Charges PB-21
and PB-21 H battery packs, as used on the Kenwood
TH-21 / 31 / 41 series of HTs. Holds two batteries,
charging one and then the other. Takes about an hour
to charge. It can also be used to power the radio
for base station use. With manual for $ 70

Kenwood DC-21. Converts 13 V DC to 8 V for the
TH-21/31/41 series of HTs. Plugs into cigarette lighter
and powers the HT. In box, like new, with manual. $ 25

Kenwood SC-15 soft case. New, still sealed in the
package, never opened. $ 15

Prices do not include shipping from Florida.

Thanks.

Source record: 83946

The hissing is probably due to the fact that the sensitivity of the headphones is too great. I'm sure you barely crack open the gain on the radio to get plenty of volume.

The solution is to attenuate the signal from the radio, say 10 dB. That will drop the hiss by that amount and you should still have plenty of gain. You can either modify the radio or make an adapter for between the 'phones and radio.

626. TS 440 ANT TUNER FIX

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-09 00:00:00 UTC
From: Tim & Cathy <pmedic@eznet.net>
Message-ID: <38C82721.741A@eznet.net>
Source record: 83951

The automatic antenna tuner in my Kenwood TS 440S became erratic and would not tune my antenna on any band. The servo motors would continuously hunt and the swr remained >6:1.

The source of the problem was the change over relay, RL1, in the auto tuner. The MATSUSHITA DS2-M relay had burnt contacts. This relay has a clear case and once the tuner was removed from the transceiver, the problem was apparent.

I ordered a replacement relay (P/N S51-2417-05) from a Kenwood parts vendor and received an OMRON G6-234P. This relay is a direct replacement for the MATSUSHITA relay.

Replacing the relay corrected the erratic operation of the tuner.

I hope this info will help anyone experiencing a similar problem with their TS 440S

That counter is one of their best items. Nice solid metal case, great frequency range if you
don't need below 1 MHz; however, I think that they have a newer version that goes below 1 MHz.
I have the one that you are considering, and it has been an excellent instrument.

Hi,
It is 99% same as SB221, same transformer, RF circuit parts, etc. The
only difference is the cabinet and addition of a stand by switch. It is
a good amp but it could be modified better. See AG6K mod. on old QST.
Good luck.

Make Easy Money! Earn Over $10000 in weeks!

Just follow these simple instructions!

LOTS OF CASH, FAST - THIS IS A MAILING LIST PROGRAM -AND COMPLETELY =
LEGAL, THIS REALLY WORKS!! THIS REALLY CAN MAKE YOU EASY MONEY!!IT =
WORKS!!BUT YOU HAVE TO FOLLOW THIS LETTER FOR IT TO WORK!!!! A little =
while back, I was browsing through news groups, just like you are =
now,and came across an article similar to this that said you could make =
thousands of dollars within weeks with only an initial investment of =
6.00!So I thought,"Yeah ,right,this must be a scam", but like most of =
us, I was curious, so I kept reading. Anyway,it said that you send =
$1.00to each of the 6 names and address stated in the article. You then =
place your own name and address in the bottom of the list at #6, and =
post the article in at least 200 news groups.(There are thousands) No =
catch,that was it.So after thinking it over, and talking to a few people =
first,I thought about trying it. I figured what have I got to loose =
except 6 stamps and $6.00, right?Like most of us I was a little =
skeptical and worried about the legal aspects of it all.So I checked it =
out with the U.S. Post Office (1-800-725-2161) and they confirmed it was =
indeed legal! Then I invested the measly $6.00. Well GUESS =
WHAT!!...within 7 days,I started getting money in the mail ! I was =
shocked! I figured it would end soon,but the money just kept coming in. =
In my first, week I made about $25.00. By the end of the second week I =
had made a total of over $1,000.00! In the third week I had over =
$10,000.00 and it's still growing.This is now my fourth week and I have =
made a total of just over $42,000.00 and it is still coming in =
rapidly.It's certainly worth $6.00 and 6 stamps.Let me tell you how this =
works and most importantly, why it works...also make sure you print a =
copy of this article NOW,so you can get information off of it as you =
need it. Believe me, it does work!!
STEP 1:=20
Get 6 separate pieces of paper and write the following on each piece of =
paper"PLEASE PUT ME ON YOUR MAILING LIST".Now get 6 US $1.00 bills and =
place ONE inside each pieces of paper so the bill will not be seen =
through the envelope to prevent thievery. Next, place one paper in each =
of the 6 envelopes and seal them.Now,you should have 6 sealed =
envelopes,each with a piece of paper stating the above phrase,your name =
and address,and a $1.00 bill. What you are doing is creating a service =
```

by this. THIS IS ABSOLUTELY LEGAL! Mail the 6 envelopes to the following =
addresses:=20

#1) S.Bassett RR#1 Cannington,
Ontario,
Canada LOE 1EO=20

#2) Sharon=20
32 Sleepy Hollow LN,
Sicklerville,
NJ 08081=20

#3) Justin=20
3707 Crenna Ave.Concord,
CA 94519=20

#4) Chicollla=20
2 Oxford Mews,=20
Poquoson=20
VA 23662

#5)E. S.K. Law=20
30 Morewood Crescent,=20
Toronto, Ontario,=20
Canada M2K 1L7.

#6) Johny=20

2465 Middle RD

Columbia Falls MT, 59912

(Be sure to use the correct postage when mailing to the the states or =
out of the states)

STEP 2 :=20
Now take the #1 name off the list that you see above, move the other =
names up (6 becomes 5, 5 becomes 4, 4 becomes 3, etc.) add YOUR name as =
number 6 on the list.

STEP 3 :=20
Change anything you need to, but try to keep this article as close to =
original as possible.Now, post your amended article to at least 200 news =
groups. (I think there are close to 24,000 groups.) All you need is 200, =
but remember , the more you post the more money you =
make!---DIRECTIONS---HOW TO POST TO NEWS
GROUPS---=20
STEP 1) You don't need to re-type this entire letter to do your own =
posting. Simply put your cursor at the beginning of this letter and drag =
your cursor to the bottom of this document,and select 'copy' from the =
edit menu. This will copy the entire letter into the computers memory.=20
STEP 2) Open a blank "notepad" file under accessories in windows and =
place your cursor at the top of the blank page.From the 'edit' menu =
select 'paste'.This will paste a copy of the letter into notepad so that =

you can add your name to the list.
STEP 3) Save your new notepad file as a .txt file.If you want to do your =
in different sittings, you will always have this file to go back to.=20
STEP 4)Use Netscape or Internet explorer and try searching for various =
newsgroups (on-line forums, message boards, chat sites, discussions.)
STEP 5) Visit message boards and post this article as a new message by =
highlighting the text of this letter and selecting paste from the edit =
menu. Fill in the Subject,this will be the header everyone sees as then =
scroll through the list of postings in a particular group!**REMEMBER,THE =
MORE NEWSGROUPS YOU POST IN,THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE =
TO POST A MINIMUM OF 200**=20

That's it ! You will begin receiving money from around the world within =
days. You may eventually want to rent a P.O. Box due to the large amount =
of mail you will receive.If you wish to stay anonymous,you can invent a =
name to use, as long as the postman will deliver it. **JUST MAKE SURE =
ALL THE ADDRESSES ARE CORRECT.** Now the WHY part: Out of the 200 =
postings say I only receive 5 replies (a very low example). So then I =
made $5.00 with my name at #6 Now,each of the 5 persons who just sent me =
$1.00 make the MINIMUM 200 postings,each with my name at #5 and only 5 =
persons to each of the original 5, that is another $25.00 for me,now =
those 25 each make 200 MINIMUM posts with my name at #4 and only 5 =
replies each,I will bring in an additional $125.00! Now, those125 =
persons turn around and post the MINIMUM 200 with my name as #3 and I =
only receive 5 replies each,I will make an additional $625.00! OK,now =
here is the fun part,each one of those 625 persons post a MINIMUM of 200 =
letters with my name at #2 and they only receive 5 replies,that just =
made me $3,125.00!!! Those 3,125 persons will deliver this message to =
200 news groups with my name at #1 and if still 5 persons per 200 news =
groups react I will receive $15,625.00! With the original investment of =
only $6.00! AMAZING! When your name is no longer on the list, you just =
take the latest posting in the news groups and send out another $6.00 to =
names on the list, putting your name at number 6 again. And start =
posting again.The thing to remember is, do you realize that thousands of =
people all over the world are joining the internet and reading these =
articles, everday,JUST LIKE YOU ARE NOW!! So can you afford $6.00 and =
see if it really works?? I think so ... People have said,"What if the =
plan is played out and no one sends you the money? So what! What are the =
chances of that happening when there are tons of new honest users and =
new honest users who are joining the internet and newsgroups every day =
and are willing to give it a try? Estimates are at 20,000 to 50,000 new =
users,every day ,with thousands of those joining the actual internet. =
Remember,play FAIRLY and HONESTLY and this will work.=20

------=_NextPart_000_0004_01BF8933.98D50D20

charset="iso-8859-1"

Make Easy Money! Earn Over $10000 in weeks!

Just follow these simple instructions!

LOTS OF CASH, FAST - THIS IS A MAILING LIST PROGRAM -AND COMPLETELY =
LEGAL,=20
THIS REALLY WORKS!! THIS REALLY CAN MAKE YOU EASY MONEY!!IT WORKS!!BUT =
YOU HAVE=20
TO FOLLOW THIS LETTER FOR IT TO WORK!!!! A little while back, I was =
browsing=20
through news groups, just like you are now,and came across an article =
similar to=20
this that said you could make thousands of dollars within weeks with =
only an=20
initial investment of 6.00!So I thought,"Yeah ,right,this must be a =
scam", but=20
like most of us, I was curious, so I kept reading. Anyway,it said that =
you send=20
$1.00to each of the 6 names and address stated in the article. You then =
place=20
your own name and address in the bottom of the list at #6, and post the =
article=20
in at least 200 news groups.(There are thousands) No catch,that was =
it.So after=20
thinking it over, and talking to a few people first,I thought about =
trying it. I=20
figured what have I got to loose except 6 stamps and $6.00, right?Like =
most of=20
us I was a little skeptical and worried about the legal aspects of it =
all.So I=20
checked it out with the U.S. Post Office (1-800-725-2161) and they =
confirmed it=20
was indeed legal! Then I invested the measly $6.00. Well GUESS =
WHAT!!...within 7=20
days,I started getting money in the mail ! I was shocked! I figured it =
would end=20
soon,but the money just kept coming in. In my first, week I made about =
$25.00.=20
By the end of the second week I had made a total of over $1,000.00! In =
the third=20
week I had over $10,000.00 and it's still growing.This is now my fourth =
week and=20
I have made a total of just over $42,000.00 and it is still coming in=20
rapidly.It's certainly worth $6.00 and 6 stamps.Let me tell you how this =
works=20
and most importantly, why it works...also make sure you print a copy of =
this=20
article NOW,so you can get information off of it as you need it. Believe =
me, it=20
does work!!
STEP 1:
Get 6 separate pieces of paper and write the=20
following on each piece of paper"PLEASE PUT ME ON YOUR MAILING LIST".Now =
get 6=20
US $1.00 bills and place ONE inside each pieces of paper so the bill =

will not be=20
seen through the envelope to prevent thievery. Next, place one paper in =
each of=20
the 6 envelopes and seal them.Now,you should have 6 sealed =
envelopes,each with a=20
piece of paper stating the above phrase,your name and address,and a =
$1.00 bill.=20
What you are doing is creating a service by this. THIS IS ABSOLUTELY =
LEGAL! Mail=20
the 6 envelopes to the following addresses:

#1) S.Bassett =
RR#1=20
Cannington,
Ontario,
Canada LOE 1EO

#2) Sharon
32 =
Sleepy=20
Hollow LN,
Sicklerville,
NJ 08081

#3) Justin
3707 =
Crenna=20
Ave.Concord,
CA 94519

#4) Chicollla
2 Oxford Mews, =

Poquoson=20

VA 23662

#5)E. S.K. Law
30 Morewood Crescent, =

Toronto,=20
Ontario,
Canada M2K 1L7.

#6) Johny

2465 Middle RD

Columbia Falls MT, 59912

(Be sure to use the correct postage when mailing to the the states or =
out of=20
the states)

STEP 2 :
Now take the #1 name off the list that you see above, =
move the=20
other names up (6 becomes 5, 5 becomes 4, 4 becomes 3, etc.) add YOUR =
name as=20
number 6 on the list.

STEP 3 :
Change anything you need to, =
but try=20
to keep this article as close to original as possible.Now, post your =
amended=20
article to at least 200 news groups. (I think there are close to 24,000 =
groups.)=20
All you need is 200, but remember , the more you post the more money you =

make!---DIRECTIONS---HOW TO POST TO NEWS
GROUPS---
STEP 1) You =
don't need=20
to re-type this entire letter to do your own posting. Simply put your =
cursor at=20
the beginning of this letter and drag your cursor to the bottom of this=20
document,and select 'copy' from the edit menu. This will copy the entire =
letter=20
into the computers memory.
STEP 2) Open a blank "notepad" file under =

accessories in windows and place your cursor at the top of the blank =
page.From=20
the 'edit' menu select 'paste'.This will paste a copy of the letter into =
notepad=20
so that you can add your name to the list.
STEP 3) Save your new =
notepad file=20
as a .txt file.If you want to do your in different sittings, you will =
always=20
have this file to go back to.
STEP 4)Use Netscape or Internet =
explorer and=20
try searching for various newsgroups (on-line forums, message boards, =
chat=20
sites, discussions.)
STEP 5) Visit message boards and post this =
article as a=20
new message by highlighting the text of this letter and selecting paste =
from the=20
edit menu. Fill in the Subject,this will be the header everyone sees as =
then=20
scroll through the list of postings in a particular group!**REMEMBER,THE =
MORE=20
NEWSGROUPS YOU POST IN,THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO =

POST A=20
MINIMUM OF 200**

That's it ! You will begin receiving money from =
around=20
the world within days. You may eventually want to rent a P.O. Box due to =
the=20
large amount of mail you will receive.If you wish to stay anonymous,you =

I am having some trouble programming the 2800 via my laptop. I think there is a problem recognizing the COM port but I am not sure. The instruction book is not written in great detail to help me figure out the problem. Any help out there from someone experienced in programming the Icom 2800 by computer?

Thanks.

i wanna trade a tm kenwood 261 a two meter mobile
new only 2 months old still have bill and in miint condition reason
for selling i want a digital camera i wanna trade for a digital
camera. any one interested. in trading. i have pictures of the radio
if your interested it got 5 25 50 watts both newmeric and alpha
newmeric readout dial pad mike. and many features auto dial
stores up to sixty channels stores up to 20 phone numbers i thinks.
has many options i can list them all. but realy nice radio. i use it
as a base so never bounced around in car. never hooked up in car.
if interested eamil me i need a digital camera for my comepuer. please
respond with offers.

650. Some hints for Yaesu FT-50R battery drain modification

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-09 00:00:00 UTC
From: Pere Palà <pere@tsc.upc.es>
Message-ID: <38C780FB.B79B8029@tsc1.upc1.es1>
Source record: 84014

I have just succeeded in modifying my FT-50R for reduced battery
drain. Here is the whole procedure. I used the following resistors:
RS part numbers 213-2503 (0603 56K chip resistor) and
213-2418 (0603 10K chip resistor).
The whole procedure requires some SMD experience, but it may be
done.
Hope this helps

Pere Palï¿½
pere1@tsc1.upc1.es1 (remove all digits to reply)
EB3AVZ

1. Remove the battery and the antenna and pull out the knob. Pull
out the protective covers for Mic/Ear and DC.
2. Carefully remove the "NiCd" sticker on the heat sink.
3. In the cavity where you removed the sticker you'll see 2 Phillips
head screws that hold the keypad in.
4. Loosen (Don't Remove) Philips head screws on rear that hold
keypad in.
5. Use screws as thumb holds to press keypad out.
6. Remove screws.
7. Remove Keypad.
8. To plastic case is press-fitted. Gently push it apart at the height
were the cavity is. You may help pushing with your thumbs through
the keypad hole.
9. Completely remove the case and the red rubber sealing.
10. You will see 3 screws that hold the upper and lower PCBs together.
Remove this screws.
11. Unscrew the nut that holds the knob in place.
12. Now you should be able to take the upper PCB apart. Turn it around
and locate the resistors to be replaced using Adam Maurer's sketch.
(http://www.ozemail.com.au/~vk3alm/home.html)
13. Some SMD experience is required to do the job. To remove the
resistors it may be useful to simulteneously work with two
soldering irons melting each terminal, if a friend is available.
14. Soldering the new resistors is easier. Use a small pincer and
a magnifying glass, thin solder wire and a small iron.
15. Now you have to reverse the whole procedure taking care to remove
the light guide to the Busy/Tx indicator from the case. You may
insert it again at the very end. Watch out to correctly
re-insert the sealings. Ensure proper PTT, Lamp, Mon and power
button alignment.
16. Enjoy!

I've used the R6000 for about 9 months. When it rains the bandwidth, 2:1 VSWR points, tightens up only on 20 meters. The antenna is tuned for 14200 and remains at 14200, but the vswr increases from 1.3:1 at band edges to about 2:1 at band edges. On occassions I put 1KW into it with no signs of arcing etc.

The performance on 10 through 17 is flawless.

Deacon Dave, W1MCE

> low cost recommendations for 6m duplexer, anyone, anyone ??

You have 3 options:

1) find used duplexers (big!) they are around from PD's & FD's
moving from low band to high/trunked. They range from free,
to expensive, and might be hard to find.

2) Use split site, and send traffic via linked radios (UHF).
This is very practical & works well, if you have 2 sites.

3) Use large size (1-1/2 to 2") heliax, and make notch stubs
for each line and notch out the other freq. This does work,
a bit less efficient than #2 above, but can be made to work.
You'll need to make about 3 to 4 to make it work right.

Good luck.

> ratio?

Hello Bob,

Probably all three, but most likely poorly-adjusted bugs. The characteristic is one form of "swing". Not the mark of a good operator if done as a habit. Often it happens because the op is too lazy to move the weight. Another cause is a poor idea of what good code is supposed to sound like.

Unlike keyer paddles, which can be set to any spacing desired, a bug must have a certain amount of "travel" (amount you have to push the lever) to work right. Two common adjustment mistakes are too much or too little travel.

The simplest was to test one's timing, and the bug adjustment, is to watch the final plate milliameter (every rig has one, right? ;-)).

First, note the meter reading when the key is held closed - call that "100%". Now send a string of dits (dididididididididit) - the reading should hover around half of the locked-key reading - "50%". Now send a series of dahs (dahdahdahdahdah) - the reading should hover around the "75%" mark. Finally, send a series of dits alternating with dahs (didahdidahdidah - no spaces). The reading should be about the 66% mark. Deviation of more than a few percent from these readings means something is amiss.

The thing about "bugs" (semiautomatic keys) is that much of the timing is still up to the operator. This means a good op has more control, and an instinctive feel for what is being sent - and the poor op has more opportunity to make mistakes.

In the old days, it was common for new hams to use a straight key for quite a while to develop a good "fist" before ever going near any type of speed key. The Handbook specifically warned against using anything but a straight key until a good fist was developed. Sadly, too few follow that advice.

A good bug, properly adjusted, will send perfect code (indistinguishable from machine sending) when used by a skilled operator. But no bug will compensate for lack of skill.

Source record: 83900

Almost always bugs and almost always intentionally set up to sound that way. Most electronic keyers would not have sufficient control range to mimic that setup.

The resulting code is known as The Banana Boat Swing and dates back to pre-WWII days if not earlier than that. A lot of it is supposedly due to early bugs being so constructed that they could not deliver dot rates slow enough for operation at rates as low as 10-15 wpm. Later models had different spring constants and add-on weights to correct the problem and allow reasonably accurate timing down to say 10 wpm.

Some, obviously, like it enough to become proficient at it. Others can't stand the sound of it.

Just cutting power to the receiver might not prevent a strong local r-f field from damaging front-end components. You should look at disconnecting any external antenna from the receiver and perhaps at shorting the input antenna terminals as well.

Source record: 83903

I just purchased one this weekend. It seems to be well made, and with just the antenna, it picks up all kinds of signals.

The manual states that the lower range is for logic timing, and expects TTL level pulses. It does, however, read a steady 60 Hz when the antenna is held near a "wall wart" power supply.

What type of probe is good for use on this counter? I think I have a 'scope probe floating around somewhere. Will that do the trick?

Not stated is what type of duplexer we're talking about here. Is it a band pass only, band reject only, or a combination? It's fairly simple to set the bandpass using a signal generator and receiver with attenuator. Alternatively, a low power HT can be used as a generator in conjunction with a low wattage reading wattmeter.

Most duplexers are designed to handle 50 watts or more but if one wants to exercise caution while tuning, the tuning can be done in power on - measurement - power off - tune - power on - measurement steps to 'walk' the bandpass adjustment to the correct neighborhood. This being done with the low power HT/wattmeter combo of course.

Tuning for the notch frequencies can be done with a signal generator - receiver combo. If the receiver has a limiter meter reading, that's helpful. Otherwise one could inject a tone with the signal generator and either use ear or a scope while adjusting for minumum signal on the notch frequencies.

I agree that a specturm analyzer is very useful with setting up a duplexer, but simpler equipment can be used as well...indeed, this is what was done in earlier times.

Have you ever wonderd how a specific radio looks like ?. If that's the case I hope that this page can be the solutions to your problems. On this page I will put all information about rigs that I can find mostly pictures and specifcations. All information is taken dirctly from the companies folders or hompages. Do you have any pictures or folder with information on radios that I don't have ? If you have and would like to help, please send pictures or information to the email adress below.
Right now this page is under constructions so more and more rigs are added all the time.

I bought one of these, too. The books says it has a selectable 50 or 1 megohm input impedance, so you could use a 1 meg scope probe. It also says the "logic" range is good only up to 10 MHz; I better check that, as there are LOTS of clock signals higher than that.

FWIW, the maximum input level is 5 volts on "logic" (0-10) and 1.4 volts PEAK TO PEAK on the other ranges. That's .707 volts peak, or just _0.5 volts RMS_ input on ranges above 10 MHz. Be warned!

708. Drake TX4 Probs!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-10 00:00:00 UTC
From: TC Dufresne <tdufres@radiks.net>
Message-ID: <Lhhy4.3167$bt3.6072@newsfeed.slurp.net>
Source record: 83921

I am having serious probs with my new (old) Drake transmitter. I put it online abt 1 week ago, and its output has gradually faded from abt 50 watts (as measured on my MFJ 941E transmatch) to almost NONE!!! What could be wrong? Are my finals kaput? This seems to have been a gradual problem, but today when I fired 'er up, almost no output at all. Please help!

Excellent condition. I have all books and a 5/8 antenna to go with it.
Reason for sale is I don't want to mount it in my new truck, I will probably
get an HP after I sell it. Make me an offer or I will trade for a handheld
HP 2-meter in good condition. PLEASE E-MAIL ME WITH OFFER!!!

Dear All

Just 2 questions
I'm going to purchase a 2m handheld radio to talk to others in a group I've just joined.
1) What features should I consider as standard or necessary on a handheld radio?
2) What recommendations (as far as manufacturer and model) can you give as tio which sets I should consider. I don't want to spend more than £150 (Pounds Sterling).

Thanks

Chris

Try a junk garage door opener with transmitter using quarter wave length
whip wire. You should be able to turn it on off at 100 meters.

725. SWAN / SILTRONIX STATION...

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-10 00:00:00 UTC
From: "A.E. 352" <americaneagle352@iwon.com>
Message-ID: <dz%x4.697$oN5.176933@tw11.nn.bcandid.com>
Source record: 83968

Anyone interested in this station?
1. Siltronix 1011-D w/CM-17L mic. (no 10 meters, 11 meters only)
2. Swan 1200-X amp
3. FD-1011 freq. display (one segment of one digit inop)
4. Siltronix SP-1011 external speaker
5. Two N.O.S. 8950 power tubes

I'm sure 10-meters can be easily 're-installed' by someone. All equipment is 7.5/10 I WILL NOT SHIP !!! I will deliver within 100 miles of Watertown, New York. I'm asking $450.00 E-mail if interested. The amp uses four 8950's and has about 20 hours on 'new' tubes. The radio could use a new tube though.

alt.ham-radio.marketplace,rec.ham-radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I have forsale a complete Drake station consisting of a T4X,R4A,MS4 & AC4 power supply.I also have the original manuals and inter-connect cables.this is a nice looking station all but for some cutouts on the bottom cases near rear where the previous owner had rca and bnc jacks so he could run inverters and transverters. I have since removed and restored to original electrical condition. I have also removed front panels ,knobs and cleaned the vfo dials.they do look nice. I am asking $350 picked up in Phila. also when radios are next to each other on table you cannot see the cutouts,I do understand Drake still has bottom cases available. John w3ayt@arrl.net
also, I may but shipping would probably run about $50 u.p.s.

I have that counter and it is capable of 1Hz to 1.3GHz. The 1MHz mentioned in the catalog is misleading, it actually refers to the lower measuring range of 1Hz to 1MHz. I would buy one again.

Nobody likes a smart ass...

I only do it because the speaker quality of the FT-100 isnt
the best when driving through city traffic. It is not a good
idea to use all your concentration in the radio when you are
driving., So I guess hooking it to the stereo system allows
you to use it station for entertainment while driving.

As to your remark

"quote" And you call yourself a HAM, HA! "unquote"

Dont start a fight, this is not the place, if you have nothing
constructive to say keep your damn mouth shut.....

Help me!!!

I am a rookie in RF remote control.

Anyway, I want to control the light on/off remotely
and receive the confirming signal simultaneously.
100 Meter distance.

I'm seeking an adequate chip.

I'll be appreciate your help if you send me an advice.

Hi,
Many thanks to all who responded to my last mail.
One of my biggest problems is that "something"
drains the battery. On principle I am thinking
that the CPU (IC601) is slighly broken, but ...
A lot of people claim that if one leaves the radio
turned ON while the power supply if OFF ... the
battery will go dead. I wonder why. I cannot find
the way it should happen. From what I can see
looking at the schematics there should be NO
difference whether the radio is turned OFF or
whether the power supply if turned OFF.
Could someone, please, explain me why should the
battery be drained when the radio is left ON while
the power supply is OFF ?
Well, if this is really true, then ... maybe the
CPU is o.k., but ... it does NOT see that the
power is gone and it still tries to "work" ?
Understanding the way the CPU is expected to go
"sleep" would help me a lot.
Thanks in advance,
Jacek.

I started out to echo the group sentiment of "forget it".
But while explaining why it can't be done, I came across a
possible soultion. I've never tried it, it's just
speculation
at this point.

A spectrum analyzer has several things going for it. You
can see
the whole curve, so you can easily set the split. If your
duplexer
has a fixed split, or correctly adjusted split, you don't
need this.

The dynamic range is much larger than you can get from a
simple wattmeter,
although wide range wattmeters exist.

The major advantage of the spectrun analyzer is super
shielding.
You're (mostly) measuring what comes thru the input
connector.

A communications receiver has very wide dynamic range. But
it lacks the
shielding to make the measurement.

So, what if we borrow a technique from bunny hunters. Build
a small box
with a mixer and battery powered oscillator inside. Shield
the bejesus out
of the box. Tune your receiver to the desired frequency
plus or minus the offset.
Now you're measuring what comes in the mixer input connector
(mostly).

You may well be able to tune the notches for a null. This
will be frowned
on by the purists, but may well be a workable solution for
the spectrum
analyzer challenged among us.

Remember, this only works if your duplexer is already the
right split
and is working properly. You won't be able to see funnies on
the attenuation

curve.

So, what do you think about that?

here's a link to a homebrew 6m duplexer page

Damien,

Have you met the famous Fractenna of rec.radio.amateur.antenna?

I think he uses mono headphones, but has perfected a way to get the surround effects of entire crowd of people listening to voices using minimal external electronics. The only thing you'd need to watch out for is an occasional shock if you use his method, unless isolation works.

Some famous author, I think it was Steven King or Dean Koontz, was taken by him and actually wrote him into one of his books.

> > I have an Explorer with ... lots of fuel pump noise and... ignition noise.

Perhaps this is common knowlege, but here's a simple thing that
made a big difference for me. I just installed a mobile VHF/UHF
rig, running it first via temporary wiring to the accessory line,
then wiring it directly to the battery. The battery installation
resulted in terrible ignition noise. I just twisted the power
wires together in the engine compartment, and the noise vanished.
Hey, works for telephone and Ethernet - twisted pair wiring.
It was not, however, a Ford truck. Good luck, all.

>I'm contemplating purchasing an FT847 HF+VHF rig.

You have that a bit wrong. The FT847 is a VHF/UHF + HF rig.
This should tell you something about where the emphasis was
placed by the radio designers. HF is something of an afterthought.
It performs adequately on HF for casual operations, but it isn't
"contest grade".

>I'm looking for user reports on how good it is, particularly on
>144MHz. I'm looking for sensitivity and strong signal rejection
>reports on 144MHz mostly.

This is a good VHF/UHF multimode rig, particularly if you want
to work satellites (the only real alternative is the IC821, and it
doesn't do HF). For satellite and terrestrial weak signal work,
you'll normally use a mast mount preamp anyway, so the radio's
basic sensitivity isn't really an issue. (Basic sensitivity is adequate,
but it isn't extremely "hot" the way some FM HTs are.)

Adjacent channel rejection is fair with the stock filters, but
the optional Collins mechanical filters are a huge improvement.
I wouldn't buy this radio without them. Under crowded band
conditions, they make a daylight and dark difference. (You
can pass on the transmit filter, it doesn't make a noticable
difference, but the SSB and CW narrow receive filters are
a must.)

There are two problems with this radio, which gets much of
its selectivity from audio DSP. Those are the lack of a real
RF notch filter, and no means of disabling the AGC. Strong
carriers can still pump your AGC, pushing a desired weak
signal down into the noise.

There is one other minor annoyance with this radio. It allows
only the use of the SSB filter in SSB mode. That's an issue
when operating modes like PSK31 or Clover where you must
transmit in SSB mode but would desire to use a narrow filter
for reception. That's not an option with this radio.

There is a crude work around. Operate split, with the Tx set
to SSB mode and the RX set to CW narrow mode (requires
the optional narrow CW filter). PITA to QSY this way, but it
does work. With late model Icom rigs like the 706, you can
lie to the radio and tell it you have a narrow SSB filter when
you actually have installed a narrow CW filter. That lets you

work modes like PSK31 and Clover without having to go split. Better are radios that let you select any filter in any mode. I think the radio designers dropped the ball when they eliminated that option from newer radios.

On the transmit side, the FT847 works, it meets its output power specs, doesn't overheat, and it stays within the limits of the spectral purity standards. There's not much more to say about a transmitter.

Unfortunately, most of that 250 watts is at 5 volts.
The 12 volt output of PC switchers is typically only
about 2 amps (24 watts). The PC doesn't require
much 12 volt power, just enough to spin the drives,
but it does need lots of power at 5 volts for all of its
hungry ICs.

Also, the 12 VDC output really is 12 VDC. Most
amateur rigs really want 13.8 VDC (what an auto
electrical system produces). That difference can
be really important. The efficiency of most amateur
rig PA transistors drops way down when the supply
voltage drops to 12 VDC. Output of a rated 100 watt
rig may drop as low as 40 watts when run from
12 VDC instead of 13.8 VDC.

There's no reasonable way to change a PC switching
supply so that it delivers more amps on the 12 VDC
output. The windings and semiconductors for that
output are too small. There's also no practical way
to increase the 12 VDC to 13.8 VDC.

Most PC switchers also won't run properly if there isn't
a minimum load on the 5 VDC output (typically you need
to draw at least 2 amps from the 5 VDC winding in order
for the switcher to regulate properly). So that's another
problem.

In theory, you could redesign the supply to produce
250 watts at 13.8 VDC. But in practice switcher design
is tricky. If you don't get it just right, very nasty things
can happen (like 300 volt spikes being fed to your rig).

Stacking the outputs of several switchers to get a higher
voltage is very dangerous, and switchers don't take well
to having their outputs paralleled either. They become
very squirrelly, and regulation may not work correctly.

Very large spikes can occur, which can trash your
radio.

About the only reasonable thing to do with PC switching
power supplies (other than to use them to power a PC)
is to gut them for parts. They have several 300 volt rated
capacitors, a toroid, an AC line filter, and miscellaneous
small parts you can salvage out of them.

759. INFO?? FT-736R ATV

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-11 00:00:00 UTC
From: k1nkr@aol.com
Message-ID: <20000311113854.02145.00000568@ng-fc1.aol.com>
Source record: 83852

Does anybody know what the function of the TV-736 Fast Scan Television (ATV) Modulator/Demodulator (an accessory for Yaesu's FT-736R) is? Maybe 1Vp-p baseband to something like a 4.5MHz IF or something? Or is it just some sort of source switcher?

The 736's 1.2GHz module has two RCA jacks (TV RX and TV TX) for the ATV interface. Neither the Operating Manual, the Band Module Installation Guide, nor the Technical Supplement have much information.

Are these things available and worth the price, or is there a substitute way of trying ATV on an FT-736R?

Skip, K1NKR

I have an Alpha 89 for sale, I just replaced it with a Quadra, not as much power but it switches with the 1000mp. Amp is in excellent condition, 3 years old with about 1 year left on warranty. Price is $2800 plus half shipping. I would prefer a deal within driving distance of Dallas, say 400 miles or so, but will ship if necessary. If interested send email to: wosborne@utdallas.edu, or call 972-562-7674 after 6pm.

Thanks for reading and best 73

> Bill, W7TI

Oh? Never had an RFI problem? You must be one of the lucky ones then.
ALL stations should have a ground at the equipment mainly for this
purpose.
The ground system at the antenna is mainly to act as a counterpoise
for any active/driven elements. Rare indeed is the antenna system that
doesn't or couldn't benefit from a decent ground radial system at the
antenna. Now this is different from a lightning protection type of
ground, which you cover by the Polyphaser stuff. Which, by the way, is a
great book; their stuff is a bit expensive, but when one considers what
it does, it's cheap insurance to keep your equipment safe.
And your comment about running RF into lossy dirt - I sure hope you're
not talking about using the soil as a return! That's plain dumb. And if
you've got RF coming down the ground side of the coax, you're gonna have
a MAJOR problem with RFI getting into everything in the neighborhood.
Better to do some sort of choke with multiple turns of coax (or some
such) and take care of things properly.

As for actual ground line feeder material, generally the lower inductance stuff you can get, the better. And a good way to get low inductance is by using a wide material (like solid strip copper or wide braid). I seem to remember an illustration in the Polyphaser book (The Grounds for Lightning and EMP Protection - or GLEMP for short) that showed a ground system for an entry panel consisting of the panel with a rather wide strip of material coming off the bottom of the panel. This then went into the ground right at the panel, thereby providing an efficient ground.

>http://www.championradio.com/ and probably others.

Also available directly from Polyphaser. This is a good basic book
on protective grounding. I quibble with Roger Block about a few of
the things he says, but overall it is a valuable addition to your library.

>If it is for safety purposes (electrical shock), all you need is to be
>sure everything is connected to the "third" pin on your ac outlet.

And make sure that the third pins of your outlets are actually wired
correctly according to the National Electrical Code. I've seen some
real horror stories out there with several volts between the pins of
different outlets. If in doubt, check it out.

>If it for RF purposes, your station doesn't need a ground at all.
>Your ANTENNA may need a ground, but your station doesn't. If that's
>the case, do the grounding at the antenna, not at the station. And by
>the way, any antenna which uses an actual connection to earth ground
>will be a poor performer, in my opinion. RF energy is expensive to
>generate - don't waste it by running it through lossy dirt. Wire was
>invented for a reason - use it!

I agree 100% with Bill here too. The only legitimate purpose of RF
grounding is to act as a counterpoise for an unbalanced antenna.
If you use a balanced antenna (example, dipole), you don't need a
counterpoise (balanced antennas are self-counterpoised). But if
you use an unbalanced antenna (example, vertical) you do need
a counterpoise, and you need it at the feedpoint of the antenna, not
back at the station. The most effective counterpoise is not dirt. Again
Bill is right, wire is needed, either in the form of elevated tuned radials
or in the form of an untuned buried radial field.

Now all that said, you need a lightning protective ground, you need an electrical safety ground, and you may even need a RF ground. It is very important that all of these grounds be properly joined together to form one grounding system. The proper way to do that is by star connection of all the various premises grounds to a *single point*.

Don't use daisy chain connections, don't use a ground bus, everything which needs to be grounded should be connected directly to the single point, and everything that *is* ground should also connect directly to the single point. This eliminates ground loops (very important for effective lightning protection). A good place for this single point is the entrance bulkhead of your station where all cables entering or leaving your station area are bonded or suppressed.

The single point brings everything to a common potential. No potential difference, no harmful currents through your equipment (or you).

I bought a Kenwood tm-251a not too long ago to use as a base station. Since
then I have seen several references that say this radio will cross band repeat.
I've look through the manual and find where I can use it on full duplex, but
no reference to cross band repeat. Can this radio actually cross band repeat?
If so, how? If it does I may use it for a mobile rig.

I was wondering if anyone could tell me about Mac brand radio equipment. I saw one the other day at someone's place and they ask me if I knew anything about them. This was a tube type, the case was green, and I would guess it was made in the 50s or 60s. I did not get the model number but I can get that. Basically what I wanted to know is if they are worth anything. This one measures about 12" wide X 10" high X 8" deep. If you know anything about them or their value please email me at mwsjgb@vicksburg.com
Also is Mac still in business? THanks for the info.

Mike.

Source record: 83877
Cross-posted to: rec.radio.amateur.equipment,sci.electronics.equipment

Aloha
I recently purchased a video cheese box.
This device connects to a VGA monitor. Video Sources are connected to it. VCR, camcorder or cable box Via S-video or RCA. It detects NTSC or PAL video inputs and doubles their scan rate from 15.75KHz to 31.5KHz and provides a standard VGA output signal. The box works great on all sources using a CRT monitor. But with a LCD monitor, it only works with a sony camcorder.

My questions are: what is the difference in signals? Is there a way to boost the video signal or manipulate it in some fashion so that it would work?
Comments please

Actually, grounds can make RFI problems worse. Earth is not a noise
sink. It is usually a noise source, and grounding conductors often make
dandy antennas for RFI. The answer to RFI problems is effective shielding
and suppression at the source.

790. Warranty card?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-11 00:00:00 UTC
From: Chas <wg2a@frontiernet.net>
Message-ID: <38CB0E85.5065@frontiernet.net>
Source record: 83883

Over the last few weeks, I have come across people auctioning or selling relatively new gear, advertising the fact that they have the blank Warranty card included. Correct me if I'm wrong, but when it comes time for warranty service, the service center always asks for your receipt, correct? I believe that the "warranty card" is called that ONLY to get you to return it, along with some demographic information about you and has nothing to do with the "warranty".
So unless your planning to include a forged receipt, toss the stupid card or send it in yourself!
Chuck

792. TR-7625 (7600) Service manual

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-11 00:00:00 UTC
From: Bill Gallagher <KS3Y@prodigy.net>
Message-ID: <8af644$9i82$1@newssvr03-int.news.prodigy.com>
Source record: 83885

Hello, All!

Does anyone have a service manual for this critter around? I'll be happy to buy a used copy, or pay shipping charges (Kenwood says out of stock).

I just picked up a couple of these rigs recently, and had to replace a bunch of caps in one (normal for a 20-year-old, long-stored rig!)..but realized that really tuning one of these up right will involve more than just the schematic!

Thanks!

Bill Gallagher WA3RA

793. Re: Warranty card?

Message-ID: <R4Fy4.512$dy6.3589@dfw-read.news.verio.net>
Source record: 83886

As far as Kenwood and Icom are concerned: A receipt is
required for warranty service (I don't care about the card).
The person requesting warranty service must be the same as
the one on the receipt.

The warranty is non-transferable.

Kenwood or Icom (Factory) may do differently but those are
the rules I must follow as an authorized warranty service
center for both.

796. Re: FT-101ZD mods?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-11 00:00:00 UTC
From: no@telocre.as
Message-ID: <38CACBB4.4754@telocre.as>
Source record: 83889
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I own one since 1982, MKIII . It is a great rig, a poor man's Collins.

The noise blanker is the best I have ever operated, Processor is true RF.

Width control with 2 cristal filters, allways cascaded.

Notch is audio only

I have bought ALL the booklets from fox tango, but never needed to modify anything.

I have the whole line, scope, L.A., speaker, transverter, and 3 VFO!! FM, and even the 12V power supply.

The antena coupler FC901 is a joy!.

Japanese have a higher pitched voice than caucasians, so I would only recomend to use a good microphone, like shure 444 (have one) but I use it with a Heil mike. I have a CW filter too

The MKIII has a known problem, the contacts in the relay in the clarifier, that is the reason why I have 2 external digital VFO (just in case) I have another analog external VFO with same drift problem.

So if you manage to take hand on a digital VFO, you will have a wonderfull rig, specially in the low bands, because of the tuned circuits.

After the FT101 MKIII I bought a FT-ONE and a FT-980, but I still use the 101

I have aligned some 10 FT101ZD, and ALL gained a lot, about 10dB in gain, by the way the S-meter is VERY well calibrated, you can check it with the attenuator.

The 12BY7A has to be of the best quality you can get, I have best experience with NEC tubes. Next G.E. tubes, but some G.E. had too much gain and had a tendency to oscillate (but like a Bronco excellent when adjusted), most of the cheap tubes did not have a clear "hump" when the preselector was tuned.

Finals last a lot, (I still have the originals) but the 12BY7A burns out, so keep some on hand. An old tube will produce a lousy "hump" when the preselector is tuned in "tune" position.

Like new in all aspects. Drake's very best portable/tabletop SW rig. .500 kHz to 30 mHz in all modes. Slectable sideband synchronous detection, AM / FM / Air Band and full mode memory retention.

Comes with all manuals , custom Drake padded caary case. This is the latest version form Drake, with improved pre-amp and whip antenna. Has connectors on back panek for all SW, FM and Air band antennas.

Bought new from Grove for $779 plus $45 for case.

Sell for $500 plus $12 shipping.

Source record: 83943

I used two 4' copper plated ground rods from RS, and a 10' steel ground rod from an electrical supply place. I drove them into the ground in a triangle arrangement with legs about 8" apart. Then, I got a length of 6 ga solid copper wire, ran it to all the rods, then ran it the 10' into the shack. All this was available locally.

What to use depends on why you want to ground your station. If it is for lightning protection, I'd recommend the book put out by Polyphaser Corporation. It is available from Champion radio products: http://www.championradio.com/ and probably others.

If it is for safety purposes (electrical shock), all you need is to be sure everything is connected to the "third" pin on your ac outlet.

If it for RF purposes, your station doesn't need a ground at all. Your ANTENNA may need a ground, but your station doesn't. If that's the case, do the grounding at the antenna, not at the station. And by the way, any antenna which uses an actual connection to earth ground will be a poor performer, in my opinion. RF energy is expensive to generate - don't waste it by running it through lossy dirt. Wire was invented for a reason - use it!

>> Couldn't computer power supplies be used for ham radio?

No way. A linear regulator is best for current under one amp for noise reasons.
MFJ claim's that they have "clean" switching power supplies suitable for radio use,
and the magazine "Radio Electronics*" recently
confirmed that during a review of various switching supplies.
I have successfully used a non radio grade switching regulator for my 2 meter FM rig,
however, the
HF band and AM broadcast band were wiped out until I replaced the supply.

* Now Poptronics.

An old blank warrantee card might have some value when you rig is 20+ years old.
A collector's item for completeness.
Otherwise, I think that you are correct with your logic with respect that the card is worthless, if that's what
you meant.

The outbacker is a good, well made, and overpriced antenna.
Everytime you change bands by moving the tap you will also need to adjust
the stinger for lowest SWR.

Your best move would be to spend about half the cost of the outbacker and
get a good screwdriver type antenna from High Siera HS-1500. It covers all
bands and is more efficaint than the outbacker outback antenna.

From: William Lee <n5wrx@parrett.net>
Message-ID: <38cb7384.0@news>
Source record: 83757

Excellent condition Kenwood TS-940-SAT (YK-88 AM filter) with SP-940 speaker and MC-60 desk mic.

This radio has the Jack Giehl chip installed and the 930 filter mod. done by Jack himself.
It was sent to IRC last July and pin diodes were installed to reduce the noise floor.
They also did a "Super Tune" and alignment, replaced the internal batterys, and cleaned the connectors.
This last trip to IRC cost $460 and greatly improved the already good receiver
characteristics.

This radio is in excellent condition mechanically and electrically.
It is just about as good as one can get.

I have all the paperwork documenting the mods, the manual, and original box.

Many will want this radio but only one will get it .... $1300 ... firm price for all three items.

band repeat?
> If so, how? If it does I may use it for a mobile rig.
> Paul
> KB0VVZ

Hi Paul,
Yes, TM-251 is exellent toy and sure can do this feature but one way
only(from 440 to 146 MHz). Open page 25 of User Manual and look to
"Unsupported Function" Menu #68-70.
If those menus is hidden you need to unblock your radio
(www.mods.dk). TM-251A/E work as air cloner, crossband repeater and
echo-repeater. I'm check all of this.
WBR,
DIA

837. Q: TS850 or TS940?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-12 00:00:00 UTC
From: Marco Eggert <m.eggert@arcormail.de>
Message-ID: <38CB831F.C30BF6AD@arcormail.de>
Source record: 83767

Hi!

I am looking for a used HF rig in the ~1000$ class.
I can't decide between the TS850 or the TS940. The Ts850 seems to be more modern, but lacks the power supply, while the ts940 is somewhat older, but has a built in power supply. I don't mind the large size of the ts940, i am not going to use the rigs mobile.

I also considered Icom, but the 761 is too expensive for me, and I just don't like the 751. I am not quite sure about the IC736, it lacks the bells & whistles..

Yeasuï¿½s FT767 is also in this price range, including 2m and 70cm. The Point is I don't mind this feature, I want a separate VHF/UHF rig. I find it rather strange that the FT767 is as expensive as the kenwood or icom rigs with has often the uhf/vhf bands installed ! Is there something wrong with them? Bad Specs?

My father uses a old Drake 4 line as HF rig, what can I expect from these modern radios, compared with the Drake-Line?

So what do you think about this?
Any further suggestions, hints? Things to look for when inspecting the radios?
Thanks for your help..!

Vy 73ï¿½s

843. Re: Looking for Ham Handheld with TX on airband

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-12 00:00:00 UTC
From: Drew Cohn <007NO00SPAM@planetarymotion.net.invalid>
Message-ID: <170f05d4.f8faa6ba@usw-ex0104-031.remarq.com>
Source record: 83773

Even if ham handhelds were type-accepted by the FCC to use on
the aircraft band, they couldn't be...I don't know of any models
that can transmit AM, or that can be modified to do so. I can
only assume you're a pilot looking for a backup radio to use in
your aircraft. I'm pretty sure Icom makes a handheld for that
purpose.

Dont forget the P.A. fan, it was an extra!!!

the 12BY7A is very enclosed, maybe that is why it burns out, I have
never done it, but allways wondered about cooling it in some way.

I allways have the pilot lamps very undervolted, the orange colour is
nicer (I think) the lamps last longer, and the plastic does not burn
out.

IN the U.S. Navy during WW2, radio ops were not allowed to use
bugs on the air, unless they held a special certificate allowing them
to do so.

The rationale here was that any distinctive keying would allow the
enemy to recognize a particular operator, and thus enable them to
track the movement of a ship. Hence the need for the special
certificate; it was earned by demonstrating clean machine-like
keying with no recognizable individual characteristics.

Hi, I have had good results with the outbacker Purth+ you do have to get out to chance bands but you do cover the whole band without moving the stinger on 10/40 80M has to be adjusted for the freq you want to talk on , but its very easy to do. and what i like about it is the recieve has a good signal to noise ratio on my ICOM706MII. I first used a Ham Stick but it brought in to much noise for my ears. Also I do not get any wind noise with the antenna eather. I also use a Clearspeeach speaker which works quite well in the car. 73s KB6HRT

>Any suggestions?

None exist. Amateur handhelds use FM for transmission, while the air band uses AM. Many amateur handhelds have AM detectors so they can receive air band, but they are unable to transmit in that mode.

Buy an aviation hanhelds. If you like small but expensive, buy new: Yaesu has a handheld based on the FT-50 body, and Icom makes about 4 different models. If you like spending less and don't mind a larger radio, buy something used. Anything made within the last 10 or 15 years should work fine.

Message-ID: <38CC1E47.632F59BD@dialpoint.net>
Source record: 83793

I just got a Icom 706MllG and installed the FL-232 optiona 350 hz filter. Seems that it will not enable in the SSB positions. This makes it useless for what I really got it for (PSK 32 and rtty using ssb with a sound card). Found I could lie to the rig and tell it I had another fliter (one that would work in the ssb mode) in the setup at #9. Is this the best way or has anyone found a beter way to use the cw/rtty filters while in the ssb mode ?

Well I beg to differ.. I have a outreach and have the stinger set and dont have to move it at ALL.. Nothing is higher that a 1:6:1 on any bands... I just touch it up with my built in tuner and full power out walla.. works good for me I also use that alpha delta tri-pod.. the HS is a good ant. also.. but there u have to mess with that little coil to get it all perfect so you still have to go out weath. its the stinger or coil.

>fliter (one that would work in the ssb mode) in the setup at #9. Is this
>the best way or has anyone found a beter way to use the cw/rtty filters
>while in the ssb mode ?

That is the only way. The firmware in the 706 knows what type of
filter is installed when you tell the radio FL-232. Since you have
two filter slots and the radio is able to do a wide, medium, and
narrow distinction tell it has either a wide SSB or Narrow SSB filter.
The only drawback is you will have to once again tell the radio it has
a FL-232 should you desire to use it in CW or RTTY mode. If the 350 Hz
is too narrow for you in CW then place a FL-100 in the other slot and
it will be accessed during CW and RTTY.

I have a pair of GE Master II Icoms already set up in the UHF ham band.

5C on 444.900mhz receive
EC on 449.900mhz Transmit

I would like to trade these for a Similiar set but with the transmit and receive reversed. Any pair is fine as long as they are LOW transmit HIGH receive
Or I will sell this set for $50 shipped to your door.

Thanks Dan

872. Yause VX-5R Modification Instructions?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-12 00:00:00 UTC
From: John Coan <jcoan@alumni.duke.edu>
Message-ID: <38CC543D.53956D35@alumni.duke.edu>
Source record: 83802

I've ordered a new HT, the Yaesu VX-5R. I found a modification web site, which mentions removing and adding solder balls on jumpers.

I'm not familiar with the proper technique to use, and the web site didn't go into the actual steps. Does anyone know if these "solder balls" are push on, or do you have to apply heat from an iron?

I have a bad feeling that they are going to be so tiny it will take someone with more skills than I. I haven't worked with surface mount devices that much. I did do a mod to a RS scanner that involved moving some SMD diodes and that was a real pain.

Does anyone have suggestions or information?

Tnx es 73

883. Re: Computer power supplies for radios??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-12 00:00:00 UTC
From: Murray Kelly <mkelly@powerup.com.au>
Message-ID: <38CAFBBC.E13C9494@powerup.com.au>
Source record: 83894

Gary is being a bit hard on the PC supplies here, I think.
There have been quite a few articles on this in the journals
lately. Simplisticly, 250W is 250W. Only the voltages
change. :-)

You can rewind transformes, stack the supplies, (as Gary says
paralleling is a no-no) but the noise may be a problem
if you don't add more output filtering. The one in QST has
heaps of filtering. I have a Samlex here, too, and it
has much less than that one.

I have raised 5V supplies to 6.8V but putting 3 x 1n914
diodes between the 5V and reference divider on the
control chip. 2 of these stacked works fine.

The '12V' is often nearer 10V I find. The winding is
not nearly so rugged.

I am trying, at the moment, to parallel 2 transformers
primaries. and series the secondaries with some added
(canibalized) rectifiers. Output back to the 5V ref.
via a zener. Fingers crossed! :-)

Cheers.

You are probably on the right track so far as the more modern rigs are concerned but it is a pipe-dream to suppose that Manuals concerning earlier rigs such as TS520S, TS530S, TS820S or other manufacturers rigs of that era will be put on-line in Adobe Acrobat format by the manufacturers. I would hope that scanned copies might eventuate for such earlier rigs but they are not presently available to my knowledge, anyone have any clues ??

GENERALLY..... computer supplies are noisy. They inherently spit out lots
of unwanted RF. There are switching supplies on the market for Hams, and
are designed and well filtered for radio use. I hope this helps.

Date: 2000-03-13 00:00:00 UTC
From: Bob <balbert@cnmnetwork.com>
Message-ID: <hmez4.3563$QF6.185243@news5.giganews.com>
Source record: 83711

I don't care for Yaesu rigs; I have had several of them. But they are popular so you have to decide.

The TS-850S is a better radio than the TS-940S. A bit smaller but you have to have a power supply. At the same price I'd easily go for the 850. I like my TS-930S and doubt the 940 offers a whole lot over it, if anything. Probably no better performer, just more bells and whistles and attendant complexity of operation. So if you prefer the 940 you could save a few bucks and get a 930.

ICOM radios are very good. I have had them and they are easy to use and reliable.

Hi All,

Is is necessary to match the 6146's when replacing the finals in the
TS-830?

If it is not necessary, is it advisable?

Thanks,

Ron

I'm soliciting your help. I need to purchase the final RF transistor amplifiers and need to know what type of 2SC2879 I need. I suspect they are the matched pair types (two matched transistors in push-pull configuration in each package) but I'm not sure. I've seen several different types and various price ranges and I want to be sure which one I need. Unfortunately, I don't have a service manual and no one responded to my previous post concerning this matter. Thanks in advance for any help given.

Hello

I have a Yaesu VX-5R and just got the E-DC-5B cig adapter. My Yaesu VX-5R will not transmit with this adapter like my old FT-50R use to a 5 watts across all bands....? I am mistaken that the VX-5R will only charge with this DC adapter and not transmit? I thought I read that you could transmit with this DC Cig. adapter?

Anyone with ideas?

Also, I understand why the VX-5R will not transmit with the factory wall plug power supply...but thought it would with the DC adapter....

Thanks

Hi Guys and Gals.....

I'm considering getting a Kenwood TM-742AD with the 220 Mhz Module.

Honestly, is it worth the $628.95-649.95 price tag, (depending where you get it)?

I'm wondering, How does the radio recieve? Transmit? Is it stable? What's the TSU-7 Tone board for? Does the remote kits work good? How hard is the remote kit and tone board to install? (I'm pretty good with computer installations.)

What are the radios good point? What are it's bad points? what are it's "querks" (or annoying things about it)

I got about $350.00 saved, and I would like that radio. But I wanna know if it's worth waiting and saving for it.

Thanks,

-Chuck K8CPA

Message-ID: <38CD95E3.B35607F7@usa.alcatel.com>
Source record: 83722

Geoff,

One LARGE problem with the scheme you propose is the second harmonic getting through in or near the 6 meter band. For example, suppose you were at an IF of 27.125 Mhz, operating on 50.125 6 meters SSB. The second harmonic of your 11 meter IF, 54.25 Mhz, would be passed through to your final and amplified very well. a BAD situation. It would also be difficult to keep the same thing from happening to conversion oscillator feedthrough at ITS 2d harmonic of 46 Mhz.

I remember having seen a conversion article in one of the Amateur Radio magazines in the 1970's; as I recall, it required reprogramming the PLL oscillator to directly convert to 6 meters from the 10.7 MHz IF.

Regards,

Cortland

913. Re: Q: TS850 or TS940?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-13 00:00:00 UTC
From: Neil <DontDoIt@ImNotHere.com>
Message-ID: <8JzNOC7I7LsqK83oXkgZ0acg49M1@4ax.com>
Source record: 83724

Two quick answers...

First, if you plan on hooking the rig up to your PC and want to use software that controls the rig (via a serial connection) you'll probably want the 850. While there does exist an interface for the 940, they're extremely rare. I use the 850, and it's been great. The only rig I (maybe) would rather use is the newer 870, because of the if-level DSP.

As regards the Drake c-line versus the new rigs, it's absolutely apples and oranges. The Drake stuff is truly great for its time, but it's not stable enough for things like PSK, and it is totally non-digital. Plus, you have to fiddle with knobs (dip-peak-dip-peak) every time you change frequency. For some that's a joy, for many others its a pain.

John:

International Crystal can rebuild the elements in the radio, provided they are on the same frequency split that you need. They may even be able to sell you the elements on the frequency you need ready to run, at a higher cost.

You would have to send the elements in and have the work done if you don't buy them already on your frequency. Expect to pay at least $25 per element (2 per frequency per radio) for rebuilt elements. When they get back, take them and the radios to the radio shop to have them installed and the radios aligned. I don't know what your shop charges for time and material customers, probably at least $50/hour.

If you get a quote of less than $100/radio this is probably what the shop is going to do. To order the elements new from Motorola will probably cost you double that.

It is your call. They may have quoted quite a fair price.

Source record: 83729

Hello, Geoff (and the gang)!

I have done some successful conversions to six meters from 237 MHz rigs.

First, find a rig with the PLL running at around 38.5 MHz...shift the PLL up to 39.3 ... Just like your normal 11 to 10 conversion. (39.3 - 10.7 = 28.600)

Now , adjust the mixer for the SUM frequency instead of the DIFFERENCE frequency . (39.3 + 10.7 = 50.00).

from here its just a straightforward operation...although you'll need to change a number of caps, and either tap or parallel many of the coils. Depending on the output circuit, you may want to sub in an MRF 642 for the final.

Cheers!

Bill WA3RA

Message-ID: <8akade$4tbe$1@newssvr04-int.news.prodigy.com>
Source record: 83730

Hello, All!

Does anyone have a service manual for this critter around? I'll be happy to buy a used copy, or pay shipping charges (Kenwood says out of stock).

I just picked up a couple of these rigs recently, and had to replace a bunch of caps in one (normal for a 20-year-old, long-stored rig!)..but realized that really tuning one of these up right will involve more than just the schematic!

Thanks!

Bill Gallagher WA3RA

I become bored with regular cb radio
harrasin truck drivers and dead keying on people on local am stations.So
now i plan on getting a 2 meter rig of some kind.

How is someone gonna know if i don't have a lincense?

What fines do i face if i'm caught?

What is a easy to operate handheld model to get ?

What is a good magnet antenna to get?

For the beginner what is a good set up to get?

over and out

Until you find the whip you want, try an alligator clip with a 6 inch
piece of wire soldered to it. Clip it at the top of the 102 inch whip
and it should work fine. If you want to be really clever, make it a
little longer than 6 inches, and you can slide it up and down the whip
for more exact tuning. Naturally, you want a good, strong alligator
clip for mobiling.

I think you will find on 2M and 440 that when the machine controllers
started talking more then the people, people started turning off the noise.
I think that VHF UHF freqs suffer from noise pollution

DO the software mod instead, its easier and its reversible if you don't like it. http://www.icongrp.com/~sllewd/vx5rmain.htm
Get the cable circuit interface from the vx-1r page or use the one for an Icom 32A ht. The EVE software works fine, no need for the ADMS-1E software.

929. Re: Motorola MT500 help

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-13 00:00:00 UTC
From: Kevin Berlen <kberlen@ticz.com>
Message-ID: <8akdq101ngd@enews4.newsguy.com>
Source record: 83740

The MT-500 is a good albeit old radio. They use "channel elements" that have the crystals inside of them. Try to get your shop to send your old elements into to International Crystal to have the freq. changed. The channel elements need to be compensated when new crystals are installed to maintain the radio on frequency and cancell out the effects of temprature drift. These are a very expensive radios to change the frequency on. In addition to having the channel elements changed to your frequency you will have to pay for at least one hour of their bench time to realign and tune your radio to the new frequency. Expect to pay approx $50 ea for the channel elements and there are two for each channel you need to change in the radio. You didn't mention subaudible tone, but just in case, the MT-500 is capable of either DPL or TPL depending on model. If you have a DPL radio and your system is TPL, or vice versa, then it may not be cost effective to put it on your system. Even if you have the correct tone board, if the code has to be changed this can be expensive as well. If, after all of this you decide to go ahead, you will have a dependable radio that will have 3-4 times the battery life between charges that contemporary programable radios have. Good luck, and hope this info helps.

931. European 144-440 simplex frequencies

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-13 00:00:00 UTC
From: Randy <kr6rc@arrl.net>
Message-ID: <38CDE200.DA300F7E@arrl.net>
Source record: 83742

Hi All!
My wife and I are going to Italy and France next month and we would like to use our ham radios while we are there.
I haven't been able to find out what frequencies are used for simplex on 144 & 440mhz. Can anyone give me a list of simplex frequencies or point me to a web site for them? I tried the ARRL web site and there wasn't anything there.
I have found the european repeater frequencies and I will program them into our radios. I know about the CEPT agreement and have those papers.
Thanks for any help,
Randy & Stephanie

932. AC-3 vs AC-4 ???

A 4 band hand held amateur radio that will transmit on 116 MHz? I sure hope you don't have a license, because if you try to pull something like that, you won't have it very long. What you are suggesting is quite illegal.

934. F.S. Cubic (Swan) Astro-150A

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-13 00:00:00 UTC
From: dslosty@pipeline.com
Message-ID: <38cc30c8.5078147@news.pipeline.com>
Source record: 83811

I've liked these rigs so well that I've ended up with THREE.
One or two have to go.

The Astro-150A is an all solid state, very small rig with digital
readout. It also has full QSK, built in 500Hz CW filter, VOX, and
noise blanker. It operates the 80 - 10 mtr bands but doesn't
have the WARC bands.

It's a totally synthesized rock stable unit with tuning via either
up/down pushbutton mike or via a variable rate scan-tune knob.
Input power is 235 watts and output runs around 110 watts.
QST was impressed with the rig in their review.
If you email me, I can send a pdf copy of their review.

The two rigs I'm offering for sale have been totally checked out and
aligned. I've made quite a few QSO's with both.

Cabinet of one has been repainted a medium gray, its front panel has a
few minor scratches but is still presentable.
The cabinet of the other is original but with a few scratches.
However, its face plate is almost perfect.

Unfortunately, I've only got one microphone for the two.
Thus I'd like $250 for one without a mike and $300 for the
one with the original mike. Manual copies are included,
along with power connectors.

73,
Doug/WA1TUT

Cross-posted to: rec.radio.scanner,alt.radio.scanners,rec.radio.amateur.equipment,res.radio.swap

Do you have a need for an sma-to-bnc antenna adapter that is custom made to fit your H.T. or scanner radio?

Adapter allows you to:
Use the more popular and wider selection available of bnc antennas.
Quickly change your antennas to base,mobile,or style use.
Help to prevent chassis connector wear or from coming loose due to always having to change your antennas.

Adapter features:
Gold contact pins for best conductivity.
Low profile size with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio for moisture and dirt protection,plus providing additional antenna support.
No need to remove once installed to make any antenna changes.

$11.95 + $1.50 S+H (Sizes to fit most radios)

For complete information and to view a photo of the adapter go to:
WWW.QRZ.COM (SWAP)(ENTER KEYWORD SMA TO SEARCH CLASSIFIEDS)

OR EMAIL: gulyas@netzero.net

I welcome any questions or comments at my email.
Thanks for looking at my posting.

The best way I can describe a solder ball is that on the printed circuit board, there are two solder pads that are very close together. You heat your iron, apply heat to the pads and the apply just enough solder that it will bridge the gap between the two pads. To remove one, I typically use a solder sucker. (A spring loaded device that you press a button and it sucks the solder inside.) Or, you can use a copper braid known as a solder wick. Either should work.

Does anyone know of a 20 meter mobile radio that's around the size of a mid size CB?? I'm just looking for something to put in my pickup and I'm not ready for the 706MKII yet (It would be worth more than my truck..)

If you have something, let me know what it is and how much you want for it, to include USPS shipping to Fairbanks, AK.

Just got 2 radios for the ambulance squad. MT 500 UHF with 2 installed channels (Neither of which I use)out of 8. Radio service says they need to have crystals installed, will have to get back to me on price & availability.Thought some of you might be able to help. WHere can these crystals be gotten, and how pricey are they? Is the local radio shop (whech seems to get all the local fire & EMS service) just setting me up for a big slaughter, or what?

If you don't have a spring, add one and then shorten the antenna as necessary. The spring should be shorted internally so it will not add any inductive load but will increase the antenna length as well as providing additional flex for low clearances.

alt.ham-radio.boatanchors,alt.ham-radio.marketplace,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have a very nice Heathkit DX-100 Transmitter. I purchased this at a flea market in 1988 and have used it less than 50 hours since then.

Cosmetically, I rate it an 8.5 out of 10. Faceplate, vfo dial, knobs and emblems are all excellent. The case has the usual scratches and very slight color fading. The chassis is the copper-plated variety with some areas of surface corrosion. The wiring was very nicely done.

Electrically, I rate it an 8.5 out of 10. I replaced one audio tube back in 1992 and this has been the ONLY failure to date. It has full output (100+ watts) on 80/75 meters with regular AM and CW contacts. A NEW pair of matched 6146s have been installed in 1998. This transmitter has only been used on 80/75 meters and never tested on other bands. To my knowledge, and my best investigative techniques, the unit HAS NO MODIFICATIONS.

This transmitter has been exclusively paired with a Hammarlund HQ-160 receiver and used with a D-104 amplified microphone and an 80 meter dipole. It has never been abused or stored anywhere but indoors. It not only comes with THE ORIGINAL ASSEMBLY MANUAL (in excellent condition), it comes with a manual photocopy. Downsizing the shack has forced me to sell this wonderful 105 lb transmitter. You WILL NOT be dissatisfied.

THIS UNIT IS FOR PICKUP ONLY. I live in Farmingdale, NY (Long Island). I would not risk shipping this and you wouldn't be happy paying for it. Contact me in the evenings (6pm to 9pm EDT) for any additional questions at 516 293-0341 and ask for Lou. Asking $250 OBO.

Go to http://hoflink.com/~lbellock/FOR%20SALE/dx100_frt.jpg or http://hoflink.com/~lbellock/FOR%20SALE/dx100_bck.jpg for a picture.

I have a very nice Hammarlund HQ-160 Receiver. I traded this rig for an old PC in 1988 and have used it less than 50 hours since then.

Cosmetically, I rate it a 9 out of 10. Faceplate, tuning dials, knobs and emblems are all excellent. The case has a few scratches and very slight color fading. The chassis is has very slight surface corrosion and the original cord is nice and intact.

Electrically, I rate it a 10 out of 10. It has velvety smooth tuning control, excellent selectivity and sensitivity. The audio is a dream, especially from THE ORIGINAL MATCHING SPEAKER. The Q-multiplier is wonderful when digging out those distant CW signals. This receiver has been used on 80/75 meters and never been tested on other bands. To my knowledge, and my best investigative techniques, the unit HAS NO MODIFICATIONS.

This receiver has been exclusively paired with a Heathkit DX-100 transmitter. It has never been abused or stored anywhere but indoors. It comes with a reproduction copy of the original manual and the matching speaker, which is in excellent condition. Downsizing the shack has forced me to sell this wonderful 40 lb receiver. You WILL NOT be dissatisfied.

THIS UNIT IS FOR PICKUP ONLY. I live in Farmingdale, NY (Long Island). I would not risk shipping this and you wouldn't be happy paying for it. Contact me in the evenings (6pm to 9pm EDT) for any additional questions at 516 293-0341 and ask for Lou. Asking $250 OBO.

well as for fines you are looking at atleast $500 a day the FCC catches you operating with out a license
and with out a license you wont have a vasild call signto identify yourself with
why dont you just go to radio shack and get the book now your talking and study it and then find a local ham club and pass the test its only a 30 question test that is so easy my 57 year old mother pasted it
good luck

Ahhh I suppose from *your* vantage point you can *determine* that
those CW stations can *hear* the SSB stations (and vice versa). Unless
you're referring to fixed station SSB I'm also not sure which (if any)
countries allocate SSB operation in the 30 M band , in the US here
it's CW/RTTY/Data only.

>CW is a mode among others, so no more privileges for CW.

Sorry to enlighten you pal but you're _NOT_ the one making that
determination ;-) much as you'd dearly love to have the power to do so
:)

>test.
>

I have a question, why does everything think that just because the
F.C.C did away with the Cw portion, that the hobby is dumbing down?
Anyone looked at the new question poll? it ain't that easy! and
besides, CW is a old, out of date, mode of communcation, the US coast
guard dosen't use it, why should we??? and as far as keeping the
riff-raff out..... Amateur Radio has always had it's share of
Riff-Raff..... anyone that dosen't beleive me, come to Detroit,
Michigan and tune into 147.14 during drive time. and take a listen,
I'm suprised Hollingsworth hasn't issued some fines here.

Anyhow, My point is, if it's something that is going to get NEW BLOOD
into the hobby, Why knock it or bad mouth it??? This is a DYING hobby
folks! We are losing LEGIONS of young Boys and Girls, many of whom
would make excellent Amateur Radio Operators, to the Internet! and if
we continue to take the "well, the FCC is dumbing down the hobby"
stance and turn our noses up and refuse to help out, or at least be
supportive of this action, We'll end up watching as the FCC auctions
off our Frequencies, little by little..... so, for once in your
lives, support this thing! and let's watch the hobby take off lie it
did in the 50's and the 70's.....

I know I am!

73's from the Desk of.....

987. Wanted: Heath and Drake stuff

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-14 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <eOvz4.6$O44.920@dfw-service2.ext.raytheon.com>
Source record: 83614
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

Wanted... the following stuff:

Heathkit:
- Power transformer and plate current meter for a DX-40
transmitter. I don't wanna spend a fortune for these.
The transmitter was a freebie and it's real scruffy.
I just hate to junk it out when all it needs is to
have a transformer and meter put in.
- Frequency dial scale for a VF-1 vfo. Must be in good
shape with all markings intact. I'll buy a whole vfo
to get the dial if I have to (and it's cheap enough).
I could also use a set of decent original VF-1 knobs,
but they're not a necessity.
- Front panel for an AC-1 antenna coupler. Must be in
good shape, with paint and all markings intact, and
NO extra holes or modifications.

Drake:
- T-4XC transmitter in good working order w/manual.
It doesn't have to be a pristine "museum piece".
My lonely R-4C receiver is longing for a mate...
- Accessory crystal cover for R-4C receiver.
- 8 KHz a-m filter for R-4C receiver.
- Model 2-AC calibrator and 2-NB noise blanker. Must
be working. I need these to go in my 2-C receiver.

73,
Dean, K5DH

SINCE WHEN did what "the Coast guard uses" become a standard, rule or
guide for what Hams use?

If the Coast Guard jumped off a barn roof, would you demand to do the
same?

PERHAPS *one* reason we should be expected to know and understand CW
operation is because the license we are granted will permit our
operation on the CW portions of the Amateur band - wouldn't it be a
good idea to give at least SOME proof we know how to function down
there? Would YOU be in favor of a DRIVING test that allows other
drivers to share the road with you, based ONLY on a written test, with
NO test of their actual ability to DRIVE? Do you REALLY think that
just making the written test for a drivers license harder will make a
better driver - without any actual time behind the wheel? No? then WHY
assume that a similar program for CW operators will be adequate to
turn them loose across all CW bands? At least the Novice license
restricted new Hams to the portions of the bands used by other
"newbies"!

and as far as keeping the
> riff-raff out..... Amateur Radio has always had it's share of
> Riff-Raff..... anyone that dosen't beleive me, come to Detroit,
> Michigan and tune into 147.14 during drive time. and take a listen,
> I'm suprised Hollingsworth hasn't issued some fines here.

Hollingsworth is too busy "tracking down" Hams running too much power,
or transmitting "broad signals" to go after any *serious* abusers in
Ham radio or CB - besides the licensed Hams are easier to catch than
outlaw and stealth CBers, who aren't licensed and don't identify
themselves by assigned callsigns... You know about the CB band don't
you - it's where access to a band was made EASY to obtain, and
required little to NO actual knowledge about operation in order to
become a "member"...

>
> Anyhow, My point is, if it's something that is going to get NEW
BLOOD
> into the hobby, Why knock it or bad mouth it???

Ever hear of QUALITY vs QUANTITY? Why assume just because we have
MORE hams, the hobby will be BETTER? How do you GET quality? Not
sure - but you CERTAINLY don't get it by merely making entrance easier
to obtain - if that WAS the case, why not just GIVE the licenses away,
that would bring lots of "new blood" into the pastime. In fact, give
me a *good reason*, using YOUR logic, why we SHOULDN'T just GIVE the
licenses to any who want them - it would sure attract lots of new
folks - and all you need do is look at 27mhz to see how many and WHAT
TYPES stampede into a hobby when barriers are lowered or removed...

WHY is it so difficult for some to comprehend?

This is a DYING hobby
> folks! We are losing LEGIONS of young Boys and Girls, many of whom

Icom 781 HF rig with built in tuner,built in scope,built in power
supply. 150Watts, Does full
power, I put it on a dummy load and it puts out 150 Watts. Comes
with Manual,Power Cord.
No original box and no mic comes with it. This rig works 100
percent
and the scope is nice and bright. The metal cabinet that goes around
it has a few touch ups on it.
The serial number is: 01779 As I stated, everything works
GREAT. Of course this would be double boxed
and packed well.

WAS: 2,675.00 NOW: 2495.00 FIRM
Or trade for GM300 VHF and UHF Mobiles GR300
of equal value or Spectra Mobiles VHF and UHF. Ham Gear,
Also looking for Collins Gear. Just let me know what you have.
Reply Email.
Thanks for reading,Rich.

995. FS: 40' Tubular Crank-up Tower (W WA)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-14 00:00:00 UTC
From: Michael Hansow <KA7CSE@worldnet.att.net>
Message-ID: <GTwz4.2233$mf.140958@bgtnsc05-news.ops.worldnet.att.net>

US Tower MA-40 tubular crank-up tower.

Max height 40'
Min height 21'6"
2 sections
242 pounds
10 sq. ft @ 50 mph

This tower is on the ground and ready for pick-up only by purchaser.
Location in north Renton, Washington near exit 7 on I-405. This tower comes
with house bracket clamp but base bracket is still in ground but might be
coaxed out of concrete with some effort. We noticed that when we lowered
tower the base pad was loose on sandy soil. This tower is part on an estate
sale. Please e-mail me if you would like to see pictures.

$400.00 or best offer.

998. Re: Cable Modem- RFI

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-14 00:00:00 UTC
From: Al Robinson <robinsona@rl.af.mil>
Message-ID: <38CEA2C3.8110DEF2@rl.af.mil>
Source record: 83625

Bill:

I had a cable modem installed last summer in a room on the 2nd floor of my house. My hamshack is in the basement and the modem doesn't bother the ham gear. Now here is the strange part. In the shack, I have a homebrewed digital clock, using line frequency as a timebase. Soon after the modem installation, I notice the clock gaining time. Connecting a scope to the clock revealed some extra glitches in the timing waveform. A few well-placed RC networks fixed the clock. The same thing (gaining time) occurs with the digital clock built into the microwave oven in the kitchen. I didn't investigate this because there are other clocks in the kitchen that aren't affected.

Good luck and 73,
Al, W2JUV

1003. 2 meter "Rubber Duck" antennas FS

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-14 00:00:00 UTC
From: Ken Simpson <W8EK@fdt.net>
Message-ID: <nMzz4.13118$JQ.781957@monger.newsread.com>
Source record: 83630

For Sale:

I have a variety of "rubber duck" antennas for sale.
All of them are made to cover the 2 meter band, and
are in new condition. They come in two different
lengths. The regular are about 6 inches long, and look
like the normal antennas that come with most HTs.
Stubby are about 3 to 4 inches long, but seem to
actually perform better than the "regular" antennas.
If you haven't tried one of the stubbies, you will be
amazed at the difference.

I have antennas with the following connectors:
BNC - stubby
PL-259 - regular and stubby
5/16 inch x 32 thread (like Motorola) - regular and stubby
RCA - stubby
F - regular

All are $10 each, plus shipping from Florida.

Thanks.

73,

Ken, W8EK

>restricted new Hams to the portions of the bands used by other
>"newbies"!
>

Now, this point I totally DISAGREE with, sense when does CW prove that
you know how to use a radio? You're talking about driving cars, this
is RADIO man, get with the program..... I know some no-code hams that
conduct themselves better than some EXTRA class operaters! so, again,

I ask you, what is the point of the CW test? There is none, it acted as a filter to discriminate against people that the "status quo" hams didn't think were acceptable into this hobby, period, end of story. it also prevented people like myself, that have A.D.H.D. from advancing any further into this hobby. and the F.C.C saw that and the fact that the requirement for the CW test was something of old hat and that the hobby has come quite along way from that time, when CW was the primary mode of operation and they made the changes... what is so damn hard about understanding that???

> and as far as keeping the

The only people that hollingsworth messes with are those that bring attention to themselves.

case in point, 14.313 crowd and I for one, will be glad as hell, when all those idiots loose thier tickets, so they won't be able to bring a black eye to this hobby any longer! truth is though, most of them that have been shut down, continue to bootleg on the bands!

well, Yes I can understand your thinking... but no, I DON'T think we should just give away the licenses, in fact they should make the

written tests harder. and from what I've seen. they did make the
written tests harder. I know what your problem is, you don't like
change. man, get with it. this is not 1930. it is the year 2000. we
now have The Internet, T.V. video games, and bunch of other stuff to
compete with... don't you think we should at least make this hobby a
little more appelling to the general public, instead of being a closed
society???

1014. Problem with MFJ Dummy Load?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-14 00:00:00 UTC
From: "Christopher D. van der Kaay" <cvanderk@earthlink.net>
Message-ID: <P3gz4.14227$qa.690453@newsread1.prod.itd.earthlink.net>
Source record: 83647

I currently own a MFJ-250 "Versaload" dummy load. I have reason to believe, due to SWR readings, that there may be a problem with the dummy load -- I am using a 3' section of RG-8x with quality connectors (just recently purchased from Cable-Xperts).

With a 100W CW carrier at 1.8 MHz, I receive a SWR reading of approx. 1.25:1. The SWR decreases to 1.15:1 at 3.549 MHz. The SWR reading begins to slowly increase after 14.000 MHz and peaks at 1.6:1 at 28.000 MHz.

Is this the typical performance of a transformer oil filled dummy load? MFJ states I should be receiving an SWR under 1.2 from 0-30 MHz.

Thanks,

Chris, N4JOY

It's only an AGREEMENT, not a law voted by people representatives.
Legally every country can decide to eliminate CW from ham exams. It's
not democratic that few people oblige ALL THE WORLD to learn CW.
There must be a democratic vote. I'm sure if there is a vote, CW will
die.

What level that may be is left up to the

If you are replacing them with new units, probably not. But don't mix
brands, or old and new tubes. Replace them, with the same
brand(mfg)(ie.RCA, Sylvania, toshiba, etc.)
Them re-neutralize the final.

1018. 11 metres onto 6 ? Anyone done it or care to comment ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-14 00:00:00 UTC
From: Geoff Darby <monitech@freeuk.com>
Message-ID: <Yfgz4.7337$za2.215269@nnrp3.clara.net>
Source record: 83651

Hi all.

Has anyone any experience of getting a multimode CB to fire up on six metres ?

My initial thoughts on this are to leave the synthesizer alone, and introduce a fixed 23MHz oscillator and mixer prior to the PA strip, and 'transvert', as it were, up to 50MHz. It should be a fairly easy job to mod the coils in the PA strip to make them tune up on 50. The driver and PA transistors should not have any trouble hacking it at this freq I think.

Likewise, the Rx front end tuning should be reasonably easy to change, and again, follow this with a fixed oscillator and mixer to down convert back to 27MHz.

Sounds fine in principle doesn't it? But then I'm an engineer, not an RF designer. If anyone has done anything like this, or has any thoughts on this, or any other way of doing it, then I'd love to hear from them. The radio I'm looking at doing it to is a Ham International Multimode II

Please reply direct to the e-mail monitech@freeuk.com

Thanks in anticipation Geoff G7RTC

1019. Readily available HRPT software ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-14 00:00:00 UTC
From: Geoff Darby <monitech@freeuk.com>
Message-ID: <Zfgz4.7338$za2.215269@nnrp3.clara.net>
Source record: 83652

Does anyone know of any 'free' weather sat HRPT decoding software to run on a PC?

I already have several progs for decoding standard APT transmissions from the polar orbiters and geosync's and am using them successfully.

I would, however, like to have a crack at the hi res transmissions, but am so far only finding extortionately priced commercial programs.

If anyone knows any different, please e mail me direct.

Thanks Geoff G7RTC

1024. 108" stainless steel whip

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-14 00:00:00 UTC
From: Dave Buda <davesmountain6@att.net>
Message-ID: <TWhz4.463$qN1.37079@bgtnsc04-news.ops.worldnet.att.net>
Source record: 83657

Hi... I'm looking for a 108" stainless steel whip.... Presently I am using a 102" stainless steel whip. Because of the car (Toyota 4runner) it is mounted
to, I get a lower SWR higher in the 10 meter band (28.900 and up). If I had one of the old type 108" whips, I thing I could lower resonance to a better SWR in the 28.3 to 28.5 Mhz range. Any ideas?

Thanks
Dave

Thanks, I already did that. I've had some problems with other antennas I've tried
with this truck (outbacker, ham sticks) and think the body is reacting with the
side mounted ball and spring mount. I remember years ago there used to be 108"
whips around for low band operations.... hope to find one.. Thanks for your reply!

This is a Barker and Williamson model 3001 hybrid coupler from a large estate. I have to admit I don't know much about this thing as I haven't found the manual for it yet. It appears to be used to connect a phone patch, tape recorder or other audio device to you transceiver and record/playback while on the air. If you know more about this device email me and I'll add it to the page. There are some scratches on the top of the cabinet. The face plate is in fine condition.

This is a HO-10 scope from a large estate. It has some scratches on the case, some small extra holes in the top and a very small dent in the top front edge. It comes with the original manual. It has a bright trace and work just fine. If you have a scope with a nice case you could use the guts from this one fix it up. Of course you can use it just as it is.

These are Heathkit Twins from a large estate. The SB-300 Receiver and the SB-400 Transmitter. They will be sold together and not split. They are both in excellent condition. There are no scratches in the cases or front panels. They are both very clean inside and out. They are both working perfectly. They would make a fine addition to your Heathkit collection or a really nice set for a new ham.

This is a Hallicrafters R-46B speaker from an estate. It is in nearly perfect condition. There are a couple of small scotch tape marks that would easily clean up. There are no scratches in it anywhere. After very close examination I did fine an extremely small nic the size of a pin head on the upper right front. It isn't visible unless you look really, really close. The grill cloth is flawless. It was meant to match the Hallicrafters SX-62B, SX96, SX-99, SX-115 and others. This is one of the nicest R-46B's I've seen.

if you use a fake or "bootleg" someone elses.....

most hams have access to a callsign server like:

http://www.qrz.com
or

http://www.buck.com

if you're info doesn't match, they'll know your a fake. and besides
all that stuff, man, It easier than hell to get a License these days,
All you got to do is get a "no-code" tech license. basically it's a 50
Multi-choice question test. and after seeing whether you enjoy this
sort of thing, you might opt to study and pass the 5WPM code test and
then advance up to general and extra class. (and before anyone goes
but! I'm speaking of after april 15 changes....)

Give you some good advice.

Use Gordon West's (WB6NOA) study guides... They are the BEST books for
getting your license's... I used the one for the Tech Test (this was
before the days of No-Code AND Novice Enhancement!)
I used the ARRL's Tune in the World with Ham Radio (no longer
published) for my novice test, I also took classes.

Also, get involved with the local Amateur radio scene. Get a scanner
and find out what the local 2 meter repeaters are. Get to know the
local hams. go to hamfests, get involved, learn from them, learn from
the old timers. They're the ones that can show you the ropes.

I hope this Helps!

1049. First radio purchase...Which HT?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-14 00:00:00 UTC
From: Jim <hop.along@worldnet.att.net>
Message-ID: <ReHNOKv2FoA+VlODMEmTXPjSAq66@4ax.com>
Source record: 83682

I'm trying to decide what to buy for my first radio. I've narrowed it down to Icom T8A, the T81 quad bander, or the Yaesu VX5.

I like the $250 price tag of the T8A the best.

I like the extended receive capability of the VX5...is it good enough to warrant the higher price?

Is the 1.2 gig TX of the T81 useful/popular?

Which would you choose and why?

Any known bugs with any of these?

Should I be looking at other radios instead? If so, which ones?

Thanks,

Jim

>Feel free. It makes no difference to me. I've done my time in the
>hobby, and now I'm retired.

Suit yourself. I plan to read electronics/antenna/physics textbooks /
information and tinker with circuits, antennas and what have you till
the day I croak. Personally I've found the CW ops , particularly the
QRP gang to be some of the most technically astute ones in ham radio,
but YMMV.

point

on 2 meters, simplex frequencies range from 145.200 to 145.595, but
we tune usually in steps of 25KHz or even 12.5KHz but seldom used (these
are FM, if you want the complete band-plan, go to:
http://www.freeweb.org/associazioni/ari-moncalieri/planvhf.html
it's in italian but you can spot what mode it's talking about).

For 70cm, the FM simplex range from 433 to 433.600 with 25KHz steps.
Warning: in italy the band from 434.000 MHz to 435.000 MHz isn't
assigned to HAM radio, so avoid tuning in that range (it's for
police service).
For the complete band-plan (in italian) look at:
http://www.freeweb.org/associazioni/ari-moncalieri/planuhf.html

> me to a web site for them? I tried the ARRL web site and there wasn't

Hi thanks for reading,

I just got my new Icom 706mkIIG. Its my third 706, the problem lies with
the
noise blanker, it no longer does the job in this model? It seems to be
trying but isn't near equal my
old mkII, not even as good as the original! Anybody know of adjustments,
improvements or been in touch with Icom. Several friends agree with me about
their new G's too. Anybody know what can be done?

Good advice from Chuck. Besides, if you have to ask how much the fine is, you can't afford to sell your home to pay for it, and that's what it could run to. Get a license. Even Trigger could pass the dumbed down test.

May be in USA, but here in France the VHF/UHF bands are so desert, that
one can think that most french hams are dead.
The major pollution is on some repeaters invaded by CB-like QSOs, but
repeaters can't be considered as ham-radio, it's like cellular phone.

Yes I think too it's a great asshole filter, but not in the same way
that you :-))

I don't hear whining / crying / caterwauling child
> like individuals in the CW portions of the bands :-)

On the 30m band, CW hams make QRM on SSB QSOs, this is not acceptable.
CW is a mode among others, so no more privileges for CW.

Yes that would be great ! no more toilet paper will save trees ! :-)
There are yet (since the 80's) chinese toilets that do not require
paper. A warm stream of water clean your ass and dry air finish the
job. A great progess for humanity :-))

My cable modem/computer setup is in a room about 10 feet from the shack on the same (ground) floor. No problems. (I have a separate old 486 computer right in the shack for logging, etc.)

BTW, you will LOVE the cable modem! Wish I had switched years ago when it first became available in my town. You will never sit down at any computer with a dial-up connection ever again!

I agree with most of what you say but I do want to comment on the quote
below.

The same comments were heard about us losing all those CBers when it was in
its heyday.

I think after a while the internet can also get to be just an appliance
which is the way the manufacturers are going. When that happens Ham Radio
will get moving again.

I can't wait until ham radio goes into the space station. Everyone will want
to communicate then.

Your going about everything all wrong here,Go into your sewing basket and get a Pin and put it in the Coax, Then grab your Micrphone that is mounted in the same room and transmit . You'll experience a slight power increase and no need for sloppy Antenna set up's.

Over and Out

Group: rec.radio.amateur.equipment Date: Wed, Mar 15, 2000, 2:21am (EST+5) From: fmdj@hotmail.com (JB) 2 meter antenna question

I live in a townhouse in an apartment complex. We're not allowed any kind of outside antenna so I've been using a 5/8 wave magnet mount on a pizza pan near a 2nd floor window. I've been getting very good results with it and my Icom 2100 but as you know... good is never good enough. I'm thinking about buying a small Cushcraft Yagi (3element) and mounting it on a microphone stand here in the same room. Other than the directional advantages-- does anyone think I'll see a difference? Thanks in advance.

I have a very nice Hammarlund HQ-160 Receiver. I traded this rig for an old PC in 1988 and have used it less than 50 hours since then.

Cosmetically, I rate it a 9 out of 10. Faceplate, tuning dials, knobs and emblems are all excellent. The case has a few scratches and very slight color fading. The chassis is has very slight surface corrosion and the original cord is nice and intact.

Electrically, I rate it a 10 out of 10. It has velvety smooth tuning control, excellent selectivity and sensitivity. The audio is a dream, especially from THE ORIGINAL MATCHING SPEAKER. The Q-multiplier is wonderful when digging out those distant CW signals. This receiver has been used on 80/75 meters and never been tested on other bands. To my knowledge, and my best investigative techniques, the unit HAS NO MODIFICATIONS.

This receiver has been exclusively paired with a Heathkit DX-100 transmitter. It has never been abused or stored anywhere but indoors. It comes with a reproduction copy of the original manual and the matching speaker, which is in excellent condition. Downsizing the shack has forced me to sell this wonderful 40 lb receiver. You WILL NOT be dissatisfied.

THIS UNIT IS FOR PICKUP ONLY. I live in Farmingdale, NY (Long Island). I would not risk shipping this and you wouldn't be happy paying for it. Contact me in the evenings (6pm to 9pm EDT) for any additional questions at 516 293-0341 and ask for Lou. Asking $250 OBO.

Go to http://hoflink.com/~lbellock/FOR%20SALE/hq160_frt.jpg or http://hoflink.com/~lbellock/FOR%20SALE/hq160_bck.jpg for a picture.

EXCUSE ME CHUCK...(your quote: it acted as a filter to discriminate
against people that the "status quo" hams didn't think were
acceptable into this hobby, period, end of story.' Where are the
old hams that stopped anyone from getting into ham radio and the
hams did not make the speed of 5, 13 and 20 wpm. That was the FCC.
You are one misguided fool. If you can do the code, which anyone
with 1/2 a brain can do, then you can operate on HF. If you can't
do the code then you can operate on frequencies above 50 mhz. Get a
life and quit thinking that everyone is out to get you...

Also Chuck, this is the year 2000. Are you driving a 2000 year car
or some old clunker from 1999? what about the appliances at your
house? get with it Chuck, this is 2000.....:)

Hi!

I got a problem with my Kenwood TS-440S AT.
When I turn the power-switch on, nothing but the light of the s-meter
goes on.
A few weeks ago it was just the same, but after a few seconds or
minutes,
a relay was clicking and everything worked fine.
I opened the case to look for bad connections, but I found nothing.
Unfortunately Iï¿½m not a professional in electrics.
Did someone have the same problem???
Answers please also directly to my mail-adress

Thanks!

Ingo

Tony,

Could you provide me with a list of issues you've run into with PKterm. Many times we find that either the problems have been solved with a later release, or it's just a usability issue. Release 1.4d of PKterm is the most solid release yet and not only fixes some issues with the program, but also works around some problems found in the PK-232 and PK-12.

As I've said here before, many problems running the program with the DSP-232 is because of the issues in the firmware of that unit. The firmware issues have been acknowledged by Timewave, and have offered a trade in program for this units.

I do want to look and address YOUR issues with PKterm. After all, if there are problems, we want to fix them. If problems go unreported, they may never be addressed.

Free feel to post them here in USENET and/or email me direct.

best regards,

: I become bored with regular cb radio
: harrasin truck drivers and dead keying on people on local am stations.So
: now i plan on getting a 2 meter rig of some kind.

Hopefully you're suffering the harrasment and dead keying and not planning
to do it on 2 meters???

: How is someone gonna know if i don't have a lincense?

They arent unless you are real dumb and say "I aint licensed and use someone
elses or a give an obviously false call". Its easy enough to get the licence
if you are prepared to study a bit. Got mine in 4 months.

: What fines do i face if i'm caught?

Recent US ones are about $17,000.

: What is a easy to operate handheld model to get ?

All are easy to use once set-up and programmed to do what you want to do.

: For the beginner what is a good set up to get?

Depends on what you want to spend.

: over and out

Friends,

I want to enable cross-band repeat mode on my ICOM 3230H 2m/440 mobile rig.
I think I need a UT-55 to do this, but the manual is very vague. So, I have
two requests:

1. Does anyone know how/what you need to do for this?

2. Does anyone have a ut-55 forsale?

Thanks!

When you actually trade in your Tech Plus license, and PASS the Extra Class, DO get back to us...

Until then, you're just another Extra Class wannabe too lazy or unwilling to actually WORK for something you want - preferring to bitch until someone GIVES it to you at little or no cost or effort...

It's pretty hard to place much credibility upon the whines of posters who either HAVE no license/callsigns they are willing to display, OR who have spent virtually ALL their "ham lives" parked in front of a micrpohone with codeless licenses bellyaching about how "unfair" it is that they must demonstrate MINIMAL CW proficience before they will be allowed access to HF CW and phone bands!

Your answer is contained in your question.

"I become bored with regular cb radio
harrasin truck drivers and dead keying on people on local am
stations.So now i plan on getting a 2 meter rig of some kind.
How is someone gonna know if i don't have a lincense?"

Yeah! You need a licence. That greatly reduces the mentioned
behavior."Step up" to getting your first licence and then learn and
improve.I think that is one thing that is different. Most of the hams I
know are trying to upgrade their skills and proficiency.

P.S. I haven't heard anyone use the word "Bud" since Fast Times at
Ridgemont High went to video. :)

It's hard to tell from the pixs on the web site if this mast is any
good for medium (e.g. 5 element 6m yagi) sized antennas. Does anyone out
there own one that would like to comment?

I have a Portaple (AES catalog) that extends to 40' but even guyed
it's hard to get any substantial amount of aluminum up that high. I've
since purchased the 36' Radio Shack mast and find it much stronger, but
not as portable.

John,

Have you checked on the ARRL web site? They have a lot of QST
articles, product reviews, and so forth available for download
for free. I recently got a 1982 review of a T-T Corsair from
the ARRL site. You probably have to be an ARRL member, though.

Why in the name of good reason would anyone going on a continental holiday bother to take ham radio rigs with them ?? Seems absurd to me, I thought the idea of a trip to Italy and France was to see the scenery not to waste valuable time rag-chewing on a radio.

The same goes for taking along a camera, I spoilt many a good trip overseas taking useless photographs which I looked at once upon return and have never bothered to take out of the folder since. Now I leave my camera and handheld at home and enjoy my holiday time much more.

Well, to each his own !!!

A very good looking microphone and matching stand. A desirable classic dynamic microphone for radio or audio use.

Great for display and use with your boatanchor or modern gear.

Good point! HOWEVER....when did you last take an Amateur Radio Exam that tested proper usage of, oh, say, packet? Or, maybe setting the proper compression level on SSB? Maybe setting the sync level on an ATV transmitter? Before you go off and say "But we don't have to use those modes!!!", my first question is one of HAVING to use CW! Furthermore, *my* driving test (yeah, it was along time ago) included backing through cones, and parallel parking, and driving on slick surfaces (ICE? In southern ARIIZONA?????), even though I very rarely HAVE to do those things. So much for the "Amateur Radio License Exam/Driving Test" paradigm. Unless, of course, you want to stay with it, in which case I'm still game. Here in beautiful sunny AZ, drivers over a certain age (I think it's 60) do NOT get automatically re-licensed - they have to take both a written and a road test! Quick question, exactly how many of today's "senior hams" would (not to say COULD) do that? In this town I can think of exactly four. The number of hams of ANY age that I'm sure couldn't pass a simple "dumbed-down" Tech test is astronomical. Just a thought.

Would you like to stay with the "driving" metaphor? If a driver performs a serious enough infraction of road rules, they not only get fined/jailed, they have to (Here I go again!) re-take their driving tests - after some mandatory traffic safety school - if they want to drive again. How many of Riley's NAL's and NOV's come with THOSE stipulations? Personally, I think that last is one heckuva great idea.

There was a little trading of words at the end of your posts which indicate that you're dreading the influx of 5WPM Generals. Rest assured that the numbers will be less one. After reading all the insults flying back and forth on the various NG's, I ve determined that taking that test and setting up that equipment would be a colossal waste of my time, which is pressed enough in other pursuits.

> = = = = = = = =

Like your tagline. Just curious how many Hunter/Shooter Safety courses you've had. We'll have to get together on rec.shooting.sports or soc.guns and compare notes. BTW, have you ever built up a muzzleloader from CVA or Thompson? They're great fun; and, ya know, they ARE among the original and most basic form of the shooting arts - almost should be mandatory! (Couldn't resist.)

Could you help out a poor, misguided, No-Code Tech for just a minute? Your argument has left me behind somehow. This part of the thread seemed to concern violations on 14.313, 3950, etc. Now, aren't those frequencies used by Amateurs who have already passed at least a 13WPM test? Given THAT point, this test filtered them out - how???????????????

Okay, I stand corrected. Assumed the Bill had passed, as would have been
prudent. I will maintain that re-testing for both Amateur Radio and driving
a vehicle would be a good idea. Of course, I'm likely in the minority (not
to mention impudent, insolent, disrepectful - let me know if I'm getting
close) with this view. I will maintain it. Before there is a, "What do you
know, sonny-boy." statement; be aware that my Dad - on his own, with no
inducement - stopped driving at 68; because he felt that his reflexes were
no longer up to the task. Since my Mom never drove, it made their
transportation the responsibility for the rest of their lives - which were

likely extended because of his refusal to drive in a manner he thought unsafe.

I will also maintain that we Amateurs should be periodically tested to determine our proficiency in any aspect of the Service...and, should CW proficiency be considered a gatekeeper or filter against the "unwashed masses", then THAT portion should be periodically re-tested, as well.

I should have read through the Statutes you cited before replying to
your post! I'm sure I'll be accused of "weasling" on this one, but my point
does still stand. Thank you for including portions of my original posting;
as I'll now ask that you return to that part where I said "...(I think it's
60)..." My bust on not knowing - therefore quoting - the proper age
delimiter. Otherwise, it still stands.

Appropos of nothing in this thread whatever, my Dad of his own volition
made himself a pedestrian at age 68; as he felt his reflexes were no longer

up to the requirements of driving. This after he was "tee-boned" by a gentleman 3 years his junior who "...didn't know there was a Stop sign". Dad's decision made his children responsible for his transportation for the rest of his life. He (and I) felt that said life was prolonged; and MY kids got to know their grandfather because of that. So, yeah, this part is personal with me.

I live in a townhouse in an apartment complex. We're not allowed any kind of outside antenna so I've been using a 5/8 wave magnet mount on a pizza pan near a 2nd floor window. I've been getting very good results with it and my Icom 2100 but as you know... good is never good enough. I'm thinking about buying a small Cushcraft Yagi (3element) and mounting it on a microphone stand here in the same room. Other than the directional advantages-- does anyone think I'll see a difference?
Thanks in advance.

And besides, the fiberglass roof on the mobile home would probably make a terrible ground plane for
his mag-mount. But the good news that I have heard is that 28 MHz antennas work perfectly for 146 MHz. Even 50 ohm dummy loads work great, and you don't even need a counterpoise!
Al

Other than what you stated allready, you will see only an improvement
of what you are pointed to. Yes there will be better gain, but only in
the one direction plus some since you will be using a base antenna
instead of a mobile. The only thing is, You might not get the response
from the antenna you wanted due to the fact that it still wont be on
the roof. But if I was in your position, I would do the beam thing as
well since I only talk on one frequency at a time anyways. You will
find that you will most likely still get all the local repeaters on
the back side of the beam much like you did on the omni mobile
antenna.

Im sure there may be others that will give a different opinion and I
may agree with them as well, But this is just off the top of my head.

Good Luck...

Wanted to buy a cw filter for an FT100. The models are XF-117C or XF-117CN.
I think these filters are used in other Yaesu transceivers.

It didn't.

I wasn't referring to the "test", merely that overall I find less
obnoxious behavior in the CW sections / with CW ops than I do in the
phone segments. Occasionally there's some yahoo sending "FU" , a
little carrier swishing etc (probably just slid down from the phone
freq's for a minute or two ;-)) but *far* less nonsense than
you'll find on the phone freq's.

Absolutely correct...but we can "go the other way:" We can use the commercial Vertex VX-10 on both amateur and GMRS (providing we have obtained proper licensing).

And you can use the same FNB-47 batteries with bothe the FT-50RD and the VX-10...as well as the same speaker-mikes.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Before you buy.

1150. RF Power Labs V180

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-16 00:00:00 UTC
From: CJ <cjr@visi.com>
Message-ID: <38D0FA5F.518F088C@visi.com>
Source record: 83524

The Courage Center HandiHams system was recently given a 2m amplifier.
It is marked:

RF Power Labs, Inc.
Kirkland, Washington, USA

Model V180
Amplifier

The front panel has two switches:

ON AM/SSB
OFF FM/CW

I guess its a 180W Peak output amp. It sure big enough to be. Anyone
know whether RF Power Labs or a successor still exists? How much drive
the amp takes? Source for a manual?

Any help whatever appreciated. Thanks.

Well, there's two issues here. One is the people who PASSed
the 13WPM and are still lids on voice.

The other is the people who USE CW for fun.

No arguement, people who use CW generally are more well-
behaved when they use it. And I'd even have to say they are
more well-behaved in general as HAMs. But then, I think
that's more a function of the fact they enjoy the hobby for the
'communication' aspect.

The people who have passed CW to 'get something' and then
are idiots are the other point. They are generally the loudest
people for the arguement of "I did it you should too" for maintaining
CW as a requirement. And they are loud and obnoxious in general
as well.

The CW operators on the other hand are on average more mellow,
although they do have some die hard idiots there too, but they
DO seem to behave themselves when in the CW bands.

From: fred-palmer <fred-palmer@email.msn.com>
Message-ID: <euMawP2j$GA.259@cpmsnbbsa05>
Source record: 83527

Excellent condition IC-735. Am second non-smoking owner. Radio is very complete with little use and has a narrow CW filter and the CW keyer. Box, manual, a mobile mounting bracket etc. are included.. Can be seen this weekend at the Midland Tx hamfest. Price is $525.00.. Also included is a box to switch high dc voltages such as the Heathkit 105 vdc and also a connection for ALC control. I worked for ICOM for 17 years and this is my favorite radio but now plan on getting a 706 MK2. Fred 940-321-2029

Hello, and I hope someone has what I need.

I recently purchased an R4C, and I would like to get some addtional
2'nd IF crystal filters for it. Specifically, the 1500, 250, and 125
hertz ones. They don't have to be Drake brand, but they do need to be
a direct plug-in (on the back of the rig) and fully operational.

Please call or email info with prices to:

NeilR@innermedia.com

Thanks all!

I have a very nice Hammarlund HQ-160 Receiver. I traded this rig for an old PC in 1988 and have used it less than 50 hours since then.

Cosmetically, I rate it a 9 out of 10. Faceplate, tuning dials, knobs and emblems are all excellent. The case has a few scratches and very slight color fading. The chassis is has very slight surface corrosion and the original cord is nice and intact.

Electrically, I rate it a 10 out of 10. It has velvety smooth tuning control, excellent selectivity and sensitivity. The audio is a dream, especially from THE ORIGINAL MATCHING SPEAKER. The Q-multiplier is wonderful when digging out those distant CW signals. This receiver has been used on 80/75 meters and never been tested on other bands. To my knowledge, and my best investigative techniques, the unit HAS NO MODIFICATIONS.

This receiver has been exclusively paired with a Heathkit DX-100 transmitter. It has never been abused or stored anywhere but indoors. It comes with a reproduction copy of the original manual and the matching speaker, which is in excellent condition. Downsizing the shack has forced me to sell this wonderful 40 lb receiver. You WILL NOT be dissatisfied.

THIS UNIT IS FOR PICKUP ONLY. I live in Farmingdale, NY (Long Island). I would not risk shipping this and you wouldn't be happy paying for it. Contact me in the evenings (6pm to 9pm EDT) for any additional questions at 516 293-0341 and ask for Lou. Asking $250 OBO.

Go to http://hoflink.com/~lbellock/FOR%20SALE/hq160_frt.jpg or http://hoflink.com/~lbellock/FOR%20SALE/hq160_bck.jpg for a picture.

>point, this test filtered them out - how???????????????

Jim, it's not the test that's a filter, it's the actual use of CW
which acts as a filter. Go down to the low end of any band and listen
to the CW QSOs -- you'll hear none of the nonsense which occurs on
the phone portions of the bands. Even the riff-raff can pass the code
tests.

Banning phone would clean up a lot of problems very quickly.

Took a couple of Hunter Safety courses years ago - but LONG since gave up hunting - I would far rather appreciate the LIVING creature than a dead one, other than rank pests and predators... Naturally, have passed the mandatory gun owner's course required for buying/registering a gun. I use my guns for pleasure/sport as in target shooting at a local range, but eyesight is getting sorta' poor for small groups at 100 yards, even with good scope sights (sigh). I do OK in most forms of target shooting - most of my rifles/pistols are .22's, decent enough for most target or personal protection scenarios - but will never make the Olympic Team... Never played around with muzzleloaders, tho they seem interesting - wonder what you think about proposed tagaments for black powder? Not much relief for shooters at any level I'm afraid...

Regards..

Gary - KJ6Q

1166. RCI 2950 help needed

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-16 00:00:00 UTC
From: BamBam <kl0an@my-deja.com>
Message-ID: <8argj8$4vg$1@nnrp1.deja.com>
Source record: 83540

Hey guys and gals.. I've got an RCI 2950 that keeps resetting whenever I turn the power off.. Now that wouldn't really be a problem if it did it the same way everytime.. Some times it'll just come up with 2600000 on the dial and you can tune from there but, then there's times when some totally weird frequency or something like 26 680 come up WITH the space in between the numbers as shown and nothing will work except to turn it off and then back on..
I know this rig has been modified for the CB stuff, I'm just wondering if there was a mod that might have caused this problem.. Anyone else have a problem like this?? Could it be an internal battery backup that's dead or what??
Any help is appreciated except for leaving the radio on 24/7.. That's not an option.. :)

Try http://www.onelist.com and subscribe to the YAESUVX5 reflector. You will find a lot of good information regarding undocumented features, hardware and software mods, computer control, accessories, etc.

You will also find links to pages dedicated just to the VX-5R.

I just picked up my VX-5R about a month ago and I'm having a lot of fun with it. It's amazing what they can pack into such a small rig.

Good luck.

We plan to go up Cape York via OTR this August with two vehicles.
To stay in touch with each other and to get help in case of an emergency,
we want to buy radio sets.

Which system shall we get?

There is the old CB (27MHz), LPD with 443MHz and PMR with 446MHz.
Here (Austria) we can use all these systems without any kind of permit or licence.
Is it the same in Australia?

Here on the east side of the Colorado River (kinda like living on the WEST side of the Berlin wall), we haven't yet been forced to take safety courses to buy guns. However, the hunter/shooter safety courses are strongly encouraged by most everybody in "the biz"; and I can't argue in the least. Sort of like the "self-policing" we Amateurs are purportedly famous for. Last course I took was that required for an AZ CCW permit. Don't need it, not planning on carrying concealed - not sure how one of my stature (5'11" and 154lbs soaking wet) would/could conceal my S&W 629 anyways - but it was an interesting class. Only shot at 5 & 15 yards, but it did bring out the fact that I needed to see an optomotrist (sp?), as a little astigmatism developing in my left eye (I'm a southpaw) is causing me to group a "little to the right"! The course was worth it just for that.

Blackpowder taggants? No problem there, nor for smokeless in anything NOT a semi-auto or levergun. The whole idea came up when McVeigh pulled HIS doofus stunt (yes, it was absolutely horrible and unconscienable, but it was unbelieveably STUPID as well - guess those type of guys are wired that way); and the idea shifted away from "tagging" fertilizer rather quickly, don't you think? As far as I'm concerned, if it can stop one idiot - great. I really REALLY hate the supposed "gun safety" laws being dumped on the law-abiding owners; but, once somebody steps over that line, I'd personally nail that animal to the wall - preferably behind a B-27 target! A little "no mercy" treatment would help the population as a whole. So taggants are okay with me. Did you hear the short news-blurb the other night? Glock is

now enacting a program, whereby their factory test-fires will include ballistic pathology - yep, they're now recording ballistics reports on every weapon during test-fire before leaving the factory. I think it's great, for the abovementioned reasons. And I just can't wait to hear how the ACLU is gonna weasel its way into saying THAT violates somebody's rights; when they've been pushing Brady, et al, so hard for so long!

Enough of this. If you'd like to continue this discussion, let's take it off this NG, and get back to AMATEUR EQUIPMENT! For starters; I'm all a-lather! Just checked ups.com; and found out my new-to-me KW TM-255a is at the UPS depot in Phoenix, being transferred to a local truck. And there's a VHF contest starting tomorrow night; which means I might find somebody to try it out with. Yee-hah!

> KA7HTR

It's not absolutely necessary, but a good idea if possible. Like Matt says, you don't really want to match brands etc. You will tend to have a little better output with less neutralization problems if they are matched.
But saying that, I've never bought "a matched" set of tubes for my 830, or any of the other kenwood hybrids I've owned in the past. But I always do try to use a set that match in brand. Preferably, both bought at the same time to likely be made from the same run of tubes. A mismatched set of finals will make neutralizing the tubes a real pain in the rear. By neutralizing, I mean you adjust the finals to have maximum output at the same point in tuning that you show mimimum plate current. And this should be set using the highest frequency. IE: tem meters. If you can neutralize if for ten, it should be fine at any lower frequency. I've heard stories of some brands of 6146's not liking kenwoods. But I forgot which... MK

Date: 2000-03-17 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <38d28965.16600188@news.swbell.net>
Source record: 83448

Hello All,

I have a Yaesu FT-747GX HF Rig for sale.
It is in great to excellent condition. It works great!
This is one HOT performing rig!

It covers 160-10m & has General Coverage receive.
It can be easily modified to transmit anywhere within
1.8-29.999MHz. ---- This is the MARS/CAP Mod,
which I could include it if you want.

This rig includes the OPTIONAL FM Board, as
well as the Narrow AM/CW Filters. I have the original
power cord, hand microphone and a copy of the operating
manual. I can also E-mail you the schematics in PDF format,
but I cannot print them up.

This has been an EXCELLENT performer for me and I
have been getting nothing but great reports on the AIR.
The power button seems to be stuck in the "ON" position
for reasons unknown. Yaesu wants around $1.77 for the power
switch when I called them last month. So, when you plug the
power cord onto the rig, it will turn on. This was not a problem
for me.

I am selling this so I may upgrade to one of the All-In-One rigs!
If you have are interested in this rig, please Call me or E-mail me.

Phone: (661) 272-6949

E-mail: radiotek@pacbell.net

I am looking to get around $400.00 for this rig... or so...

If you would like more info on this rig and some pictures, please go
here:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=262568457

This was on E-bay, but the buyer backed out, so I am trying to sell
it.

Thank You for reading & 73,

DE Mike KQ6MU DM04 Palmdale, CA

Hey!

I've got a collection of old valve radios, I find a modern SGC autotuner
ideal for end fed wires,
I've got the 200w and 500w version, both excellent!

There's nothing wrong with old radios, after all it is REAL radio :_))

A common problem with RCI radios. Modified or not, they still do it!
The CPU is the cause and even replacing the CPU will not correct it.
Just something you will have to live with as I do!

Geoff,
You are way beyond me on the 27 MHz to 6M conversion.....but reading your post brought back fond memories of my junior high school days (38 years back) when a buddy and I converted some cheapo Allied Radio Knight Kit C-100 CB walkie-talkies to 6 meters. Obviously, they were AM, not multi-mode, but you sparked the memories of re-winding coils and soldering crystals and actually hearing a signal on 6! I had all but forgotten those great times. Thanks for the memories!

Terry, Wï¿½FM

I confess I am not a regular here, but I want to present a thought. Iridium is shutting down tonight at midnight. Plans are to deorbit the satellites and let them burn up. I am proposing that the SYSTEM and frequency allocations be donated to amateur radio for a world wide emergency communications system. Now, now, seriously, the big costs are all past. Labor for operating earth stations to perform stationkeeping on the satellites is the only ongoing expense, and that would be voluntary ham effort.

Yes you need a license.

The fine can be as much as $10,000 and/or 5 years in prison for each
infraction
and each day you commit the infraction. First time usually costs you around
$1000 and a ban on getting any radio licence for up to five years. Then the
fines and other penalties go up from there.

Amateur radio operators has call sign data base programs at their beck and
call, and use them prolifically. Also, the owner of the call sign you use
will
file a complaint and they will track you down and turn you in to the FCC.

A ham license is not that hard to get these days, so, Why do you want
the prize without working for it?

1205. Re: Calling any Icom ic-706Mk2G owners!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-17 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <38D2F2DE.8F527AFE@dialpoint.net>
Source record: 83470

I just bought one a week ago. Been playing with it every day . I have
been a ham for over 25 years and active mostly on VHF. While the rig
will not equal the other vhf and uhf equipment I have for the weak
signal ssb work, it comes close. I have been getting some very good
audio reports on the low bands from several hams that I normally talk
to.

It takes a few hours to get to know the rig. The book is not very clear
in some places. After about 5 hours of playing with it I am getting
use to it. For all this rig does that is not very long. It would take
me that long to get that use to just a dual band vhf/uhf FM rig.

I wish that it had a 50 mhz antenna connector. Also it will not receive
on one band and transmitt on another at the same time (duplex). That
makes it difficult to work the satelites. Some of the accessories are
high for what they are, but probably all rigs are that way.

Right now there are some very good deals on the rig. Some places have
it for just under $ 1100. Picked mine up for $ 1028 tax and all at a
hamfest. That is just about the cost of a starter low band rig plus you
get the vhf bands as well .

I am glad I bought the rig. I would do it again.

Body handling: Binary attachment payload not displayed: Peter.Freeman.vcf

Greetings all,

I have a Kenwood TR9000 2m all-mode radio. It now will only tune
146-148 MHz, instead of 144-148MHz. Kenwood in Australia say that it
cannot be fixed, as they no longer have stock of the processor board.

I was wondering if anyone might be able to point me in a general
direction to try to resurrect the radio??

Thanks,

Peter

Wasn't the IC-765 a downgrade from the 761 bacause of a patent
infringement claim against the dual passband tuning in the 761?
I believe that the synthesizer noise was improved in the 765.

I have for sale an Icom IC-211 All mode SS/FM/CW Transceiver. This rig is in EXCELLENT shape with only a few minor surface scratches on the top. This is a real beautiful rig and here are some features: transmits and receives from 144mhz to 147.995 MHz in FM, USB, LSB or CW modes. Output power is 10 watts PEP SSB, 10 watts on CW and 1-10 watts on FM. This rig has a Com-Spec Tone Board installed for PL Encoding for repeater use. Has dual VFO's and can work simplex/duplex and has repeater offsets. RIT, Squelch, Volume, RF gain, VOX, dimmer switch. This outfit can run on AC or DC, and has a built in power supply with AC power cord and Shure Microphone and a copy of the operators manual. 7 digit frequency readout. This is a GREAT Heavy Duty Rig, that is very well built, operates excellantlyand is in EXCELLENT CONDITION! I am selling this due to space limitations and my upgraded and have decided to buy an Icom 706. I am asking $325 plus shipping ($10.00). If you have any questions or would like a pic emailed to you, please contact me! Thanks much!

Message-ID: <38D1C4D3.30C50029@att.net>
Source record: 83570

The 765 is a different radio from the 761 and is not merely an "upgrade" as is commonly thought. There are major design changes and improvements. It is true that the PB tuning was changed to a plain IF Shift due to a patent problem, but it is a 30-minute job to undo that and restore good PBT operation in addition to IF Shift. Beyond that, there is no comparison in the operational and performance differences between the two radios.

I won't try to catalog all the differences, but anyone interested should consult the ARRL reviews of the 761 and 765 and note in particular the discussion of 761 shortcomings and warts and then the manner in which these were corrected in the 765 plus adding much more performance capability.

In my book, the 761 is a *good* radio - certainly for its time and against its peers. But the 765 is a *great* radio that still stands up to the competition many years after its introduction. It particularly "shines" for CW operation. Although mine is now the shack backup for a Kachina, it will never be sold - it is just too good to get rid of.

> Hey guys and gals.. I've got an RCI 2950 that keeps resetting whenever
> I turn the power off.. Now that wouldn't really be a problem if it did
That means your battery is almost dead (inside of the older RCI 2950 there
is a small 3V battery which keeps the memory when the radio is off).
Jacek.

1236. Alinco DJ-190TD Sale (Problems?)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-17 00:00:00 UTC
From: "Kenneth M. Gianino" <ken@hnvr.com>
Message-ID: <38D236F9.FDD17E2C@hnvr.com>
Source record: 83580

I just purchased an Alinco DJ-190TD from Radioshack.com for $79.95 and am quite satisfied with it for the price. I was, however, aware of the problem with using ni-cd cells in the alkaline case. How can a radio that states "the 4.8V ni-cd battery is standard" have such problems with 4.8V in the alkaline case?

I'd sure like to know if someone has determined which resistor to change to reduce the sensitivity of the low voltage sensor or has figured some other work-around. I've bent the tabs out a bit and the case works fine with alkaline cells, as promised. For that matter, it receives forever with ni-cds; you just can't transmit more than 5 minutes.

Otherwise, I think I'm going to like this radio. I didn't know how much I missed a more "full sized" HT with an efficient antenna and reasonably sized buttons. I can even see the display while driving. The few missing features are a non-issue (haven't made an autopatch since I got a cellphone), although I wish someone would have warned me that it only has a timed-scan mode.

From: Scott Van Aartsen <tescotty@prairie.lakes.com>
Message-ID: <38d23ab9@sushi>
Source record: 83581

Hi. This is a little off-topic, but I'm a little out of the area for cellphones, and would like to put an antenna on my ham tower to cover cellular. But I'm not too familiar with frequencies that high.

Can anybody suggest an inexpensive (within reason) yagi (5 or 6 elements should do it I think) and coax? I don't know what kind of coax works best at those frequencies either. Are cellphone antennas 50-ohm nominal? How about a connector? The phone will accept TNC or what I think is a proprietary Nokia connector . . .

And one last thing -- could you cc my email? I don't get on the 'groups much.

Why continue to hunt? Have you been looking for a complete Yaesu collection?
I have the following setup. Nearly complete collection.

Yaesu ft101E
Yaesu FL2100B
Yaesu FT250 & 650 Transverters
Yaesu 901 cw / rtty reader
Shur Desk mic
Yaesu 101 Landliner (patch / speaker)

Everything is in good order and have original manuals for most pieces and
copies for others.

If you might be interested in complete set up, email me with a serious offer.
I simply want to get solid state set up.

Bill

> about understanding that???

Well, mainly because it's wrong. The code test is a test to check for to see if you know code. Nothing more , nothing less. Being as it's legal to use cw on I believe 100 % of the ham bands, I don't think it's unreasonable to test for this. Not to mention the treaty still requires it at this time. And with the new 5 wpm for general and up, it's no real work at all anymore. Do I have a problem with this? Nope, not at all, as I realize nothing stays the same. It doesn't cut any of my priveleges, so what me worry? But lets take the extra exam for instance... Theory and 5 wpm code. If you are going to give priveleges for the lower "cw" parts of the bands, where no fone is allowed, don't you think it makes sense to be able to at least do 5 wpm? After all, 65 percent of the exclusive extra priveleges are in the lower "cw" bands. Frankly, I think 5 wpm for the extra ticket is almost the same as "no code". Not really much difference. Also, cutting the cw tests is not dumbing down of the exams, except for cw. It is , like it or not, a dumbing down of the code tests. But like I said, I have no real problem with this, and don't complain about it. The code tests don't have anything to do with the numbers of hams. After all, in the big runs in the 50's and 70's, many taking the tests were young. They didn't complain about the code. They just did it. Whats really killing ham radio is all the new technology. Computers, internet, etc,etc. Ham radio is kinda boring these days in comparison.. Cutting the code tests is not going to change that. New modes and technology might. MK

The fcc has no trouble catching anyone they want to catch. Ask the guy here in Houston that they just stuck with a 17,000$ fine if they had any trouble DF'ing him. I think not. He was on the "cb" no mans land. Either in between channels, which is like shooting yourself in the foot if the fcc arrives, or above 27.405 mhz. MK

1256. Knight P-2 SWR/Power meter

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-18 00:00:00 UTC
From: KC2DLA Paul <kpaul@usa.net>
Message-ID: <8b14j8$f0t$1@bob.news.rcn.net>
Source record: 83300
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Hello Group,
I just purchased a Knight model p-2 SWR meter. I was told that it will handle 1.5kw (which I am not interested in) and that it is good up to 225MHz. I popped off the cover of the RF sensing unit(which is separate from the meter) and noticed that the lead through for the coax is entirely shielded, which says to me that it could accurately measure SWR up to 225MHz. I would like to use this meter for qrp work and accurate measurement of SWR from 1 to 5 watts on HF. It does have a sensitivity pot on the meter, but I cannot drive my TS-520 down that low (or being totally honest, I am not sure how to drive it below 10 watts) in order to test right away. If the meter is not sensitive enough for qrp, is it possible for me to change the resistors or capacitors in the RF sensor or maybe even the main sensitivity pot in the meter? If anybody knows any more information about this power meter, I would love to hear from you!

Tnx es 73 de Paul, KC2DLA

Les,

I also have this unit, and I didn't know about the problem until I
installed new Svetlana tubes and was trying to retune the input tanks as
recommended. I am using the amp with an FTDX560, so the high SWR
doesn't really affect anything, but I can see that this would be a
problem with an SWR-sensitive solid-state rig. I would also be
interested in any suggestions that might be offered for this problem,
since I might one day want to use the amp with a modern rig.

At first, I thought there was something wrong with my SWR meter...

April 4. MIR has been leased by a commercial company, which will
operate it as a commercial venture. They've put up $20 million for
the April flight to evaluate MIR's condition and see if it is feasible
to renovate it for their purposes.

From: William Lee <n5wrx@parrett.net>
Message-ID: <38d44406.0@news>
Source record: 83308

Excellent condition Kenwood TS-940-SAT (YK-88 AM filter) with SP-940 speaker
and MC-60 desk mic.

This radio has the Jack Giehl chip installed and the 930 filter mod (better
transmit audio) done by
Jack himself.
It was sent to IRC last July and pin diodes were installed (reduces the
noise floor).
They also did a "Super Tune" and alignment, (better sensitivity) replaced
the internal batterys,
and cleaned the connectors.
This last trip to IRC cost $460 and greatly improved the already good
receiver characteristics.

This radio is in excellent condition mechanically and electrically.
It is just about as good as a TS-940 can be made to work.

I have all the paperwork documenting the mods, the manual, and original box.

Many will want this radio but only one will get it ....
$1300 ... Shipped to your door,,, for all three items.

I have a nice TR4 with the RV3 VFO and AC3 power supply for sale.
Physical shape is about a 7/10...front panels are flawless, some
corrosion on the TR4 chassis, some scratches on the top of
both cases. Electrically it's perfect as far as I can tell. It makes
full power (175-200w) I've owned it for about 10 years and recently
re-capped and aligned it. I would be happy to QSO you if you'd like to
hear it. Sell as complete set only.
Asking $275 plus shipping from 54725. Includes original manual and hand
mic.

Rick accurately portrays my position with the exception that I run ham stuff exclusively under Windows 98 and have not tried his package because I am sufficiently happy with XPWare that I do not choose to go through the pain of adopting a new solution - his PKTerm may be wonderful - but XPWare does all I want with consistency.

1274. Icom IC-2350 Dual bander questions..

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-18 00:00:00 UTC
From: chukgleasn@aol.com
Message-ID: <20000318101255.01948.00006472@ng-dc1.aol.com>
Source record: 83348

Actually two questions:

1) Anyone ever look into the possibility of separating the front panel of an IC-2350 dual bander? I've had it open, but just didn't thing about it til recently. Seem to remember it's a two-row ribbon-cable connector. Is it just lowfreq. control/audio/etc. signals? Might work.....

2) Would someone have a schematic of the microphone jack they could get to me? I'd like to make a 'handsfree' microphone/PTT arrangement, so need the pinout/orientation.

Thanks,
Chuk Gleason

Hi,
In autos i have found that the coax makes a differance on what your SWR reads so if you cut your antenna for 10Ms and use 181/2 feet of RG58 check your SWR and if it it is still high add a 3ft jumper and recheck SWR it should drop, the longer the coax the broader the bandwith. You could add 3ft jumpers till you get SWR where as broad as you want it then make up one piece.

FS: Motorola 2-Way Trunked Radio System "Maxtrac 800" (410) Baltimore, Maryland, MD area

Dear News Readers,

I am selling my 5 unit, 2 base station Motorola 2-Way Trunked Programmable Radio System "Maxtrac 800". It runs on 800 megahertz frequencies. I will sell the system whole or separately.

I am asking $1500 for the system complete. All offers will be considered!

"BEST OFFER" GETS THE RADIOS !

The system specifically consists of:
5 Motorola 2-Way Trunked 800 MHz Mobile Radios "Maxtrac 800" Programmable 15W 1 System / 1 Subfleet ($3,907.50 new)
2 Base Control Stations ($748.00 new)
1 Deskset Base Station Extension ($434.11 new)

The system was used for my towing company, and we have reduced our fleet and have decided to utilize cellular communications. In Baltimore, a company called Nextel has purchased and is converting 75% of the analog 800 megahertz frequencies to digital signal only, reducing the system my radios operate on. The system was running on 20 different channels, and will probably be reduced to about 5 channels which might be pretty crowded in Baltimore, depending on how may radio users switch to digital or cellular.

If you have any suggestions on any places on the internet that I should advertise these radios, I would really appreciate your advise.

Only if we could get the FCC (and ITU) to reallocate the frequencies used by Iridium to amateur use. (We can't just go up there and retune the satellites to an amateur band.) There's essentially zero chance of that happening.

Then we'd only have the small problem of coming up with the money. They're asking $5 billion. They won't get that, but the creditors and bankruptcy court are unlikely to approve any deal involving a sum amateurs can possibly raise. There's a bigger tax benefit to just deorbiting the satellites and writing them off as a total loss than there would be to donating them to AMSAT. (Yeah, our tax system is really screwed up.)

>piece.

There are only two cases where feedline length will make a difference
in VSWR readings. Both represent undesirable conditions in your antenna
feed system. Case one is when the coax is significantly lossy. Then a longer
coax will have greater loss and VSWR will appear to be lower due to attenuation
of the reverse voltage wave. This is an obviously undesirable situation since
power wasted heating the coax isn't being usefully radiated. To avoid this
situation, use the lowest loss coax feasible, and cut it to the shortest length
practical in order to reach from the radio to the antenna. If you still have a
VSWR problem, solve it correctly by adjusting the antenna to present a
50 ohm load (this may require a matching network).

Case two is when the coax is serving as *part of the antenna* by
supporting common mode currents. In this case, changing coax
length is actually changing antenna length, which will of course
affect VSWR. Problem is, the coax is inside the vehicle where the
radiation it produces due to common mode currents is doing you
no good, and can cause harm by interfering with vehicle electronics
or causing "hot chassis" and RF feedback problems with your radio.
Solution. Ground the antenna base well to the car frame and body,
and use a common mode choke on the coax if necessary, in order
to suppress radiation by the coax.

There is only one situation where varying coax length can serve
as a matching device between the radio and the antenna. That's
when the coax is being used as an impedance transformer. You
can't do this if you're trying to match a 50 ohm transmitter using
50 ohm coax (you just run round and round the constant VSWR
circle on the Smith Chart). But you can do it if you are using a
coax of *some other impedance* chosen so that in conjunction
with the length you get the proper impedance transformation.

Example, specific lengths of 75 ohm coax are often used in 50 ohm
systems as an impedance transformer. One common case is to
combine two antennas into an array. A quarterwave of 75 ohm cable
will transform the 50 ohm feed impedance of an antenna to 100 ohms

at the other end of the cable. If you do that for each antenna, you can then join the cables with a coax Tee to get 50 ohms to present to the radio. (The Tee combines the two impedances in parallel.)

i love the radio but i'll admit i'm biased.
i also own the 706 mark none which now serves as remote base on my
repeater.

the 2g is installed in my dakota pickup where the mark none used to be.
for a mobile rig with the clear knowledge that it is intended for mobile
use, it does great. the dsp functions are very welcome after using
the mark none. good receiver, always good comments on the tx audio.
easy to use. i use the rig just about everyday on 70cm, 6m and 17m.
i have it separated with the head unit on a goosneck mounted to the
'hump' and the main unit in the storage bin underneath the rear seat.
i use the dtmf mic i bought for the mark none so i can use my repeater
functions. the only thing that slows me down is remembering to turn
off the dsp functions before i return to the land of repeaters.

I have forsale a complete Drake station consisting of a T4X,R4A,MS4 & AC4
power supply.I also have the original manuals and inter-connect cables.this
is a nice looking station all but for some cutouts on the bottom cases near
rear where the previous owner had rca and bnc jacks so he could run
inverters and transverters. I have since removed and restored to original
electrical condition. I have also removed front panels ,knobs and cleaned
the vfo dials.they do look nice. I am asking $350 picked up in Phila. also
when radios are next to each other on table you cannot see the cutouts,I do
understand Drake still has bottom cases available. John w3ayt@arrl.net
also, I may ship if I don't get a local buyer but would probably run about
$40 u.p.s.

Well,

Its kinda like this - if you really want to make the break from CB and get into Ham then you will go the extra 1/4 mile (hey - the Tech test is not THAT hard) and go legitimate.

OR - you can be an asshole and pirate your way in.

Fines? Several thousand bucks (no lie)

Get caught? Hey - what callsign are you going to use? Who would continue to talk to you if you dont ID once in a while.

Just my opinion. Do what you want.

Well, maybe it was a great idea when they had it, but by the time they got the system operational it was obsolete. This has unfortunately been the case with many space systems. The lead times are so long that their technology becomes obsolete before they can even get into orbit. Iridium's capacity is small and its costs are high. They never got enough subscribers to even dream of breaking even. (They badly misjudged the cost sensitivity of their market.)

Their competitors are fielding digital technology, which has greater capacity, lower costs, and is software configurable so it can adapt to improvements in technology without major hardware changes. In other words, they won't have to suffer the long lead time of launching new satellites to take advantage of improvements in technology. Iridium can't do that.

Hello everyone,

I have recently purchased a FL2000B amplifier and am having problems with a high input VSWR on the 20 and 10 meter bands.
Up to 3:1 on both and adjusting the input coils makes no alteration to the VSWR on these bands.Have also tried to change the input caps with no sucess.Anyone out there have any suggestions on fixing this problem?Any help would be much appeciated.
My personal email is lestatar@bigpomd.com.au for any personal replies.

Best regards from Les VK3TEX Victoria Australia.

Burning up 60 or so new satellites is a ridiculous thought. They are not going to de-orbit them and they cannot be used for ham stuff. Even the old out of service satellites are usually parked out of the way and left alone, not sent to a fiery grave. Steve McCaw/Teledesic will probably buy the system and use it for high speed internet or something that might make a profit.

There is a Russian web page, but I don't recall the URL. I'm getting my
info from the www.space.com site. That doesn't say if the new crew will
be operating amateur radio from the station. I'd sure like to know the
answer to that. I've talked to MIR a number of times, one memorable
time while mobile in the wilds of after midnight Tennessee (we had the
whole pass to ourselves). I'd like to do it again.

>complained of the delay.

The major problem with early use of satellite relay was lack of proper
echo cancellation in the network. A quarter second isn't much lag in a
conversation, but it is distressing to hear *yourself* with a quarter
second lag. The digital cellular network has an even worse lag, nearly
1/2 a second in many cases. But that hasn't resulted in caller complaints
because the network has good inherent echo cancellation. (The delay is
protocol induced, not propagation induced for terrestrial digital cellular.)

The real reason AT&T moved away from satellite (and they still use
some), is fiber. It has more bandwidth and is cheaper (once it is
installed). It is digital, and has protocol induced delay in addition
to propagation delay, so there's still a quarter second or more of
delay, but good echo cancellation has kept that from being a major
problem.

The one place where the delay is a real problem is in IFB links
for reporters in the field. Normally, they are fed program audio
so that they can interact with the talent on set. But the delay
through the digital cellular network was enough to make them
stutter. (This is customer equipment induced echo, and can't
be suppressed by the phone system.) When we switched from
analog cellular to digital cellular we wound up having to feed
mix minus to the local dial in IFB system to solve the problem.

Mix minus is program audio with everything *but* the reporter's
voice. He doesn't hear a delayed version of himself that way.
We'd done that for long distance calls and satellite remotes for
years, but it hadn't been necessary for local remotes until
digital cellular came along.

>Iridium users had the transmission delay plus they had to orient the
>antennas, after finding a nice clear shot at the bird. And, for all of
>this they had to pay a higher price to use this service. Now, how many

>people on this earth would do all of this? Not many.

Actually, Iridium is LEO, so the propagation delay is quite small compared to the delay through GEO birds. Simple tilted whip antennas are used. Terrestrial signal blockage can occur, however, ie a building or hill can be in the way, and multipath can be a problem. Systems like Globalstar get around these problems by having multiple satellites relay the same call. They can do that because they operate CDMA. This "soft handoff" deals nicely with terrain blockage and multipath problems. Iridium can't do that.

>Iridium may have looked good to the design engineers, but the users
>didn't buy it.

The major reason users didn't buy it was that it cost $6 a minute, the phones were very expensive, were big and clunky (analog), and didn't seamlessly interoperate with terrestrial cellular systems (where available). By contrast, Globalstar phones are cheaper, smaller, and interoperate with terrestrial cellular systems. Satellite time is still expensive, but you don't have to use satellite all the time. The phone can automatically switch to the cheaper terrestrial systems where available.

Digital SS technology, better system design, (and a better marketing plan) makes systems like Globalstar practical. Iridium's older analog technology put it at a serious disadvantage. Iridium looked like a good idea when it was conceived, but its conception was a couple of technological generations ago. By the time it was operational, there were better and cheaper user options coming online.

I have a brand new SUNAIR GSB-900 HF Military/Commercial HF Tranceiver.
It was stored in the original safety pack since 1982. This is a 100W
continuous rig that is nearly bombproof. It comes with the mic, manual
and all the cables for connecting it to the remote head. Also all cables
for 12V 120V and 230V operations. A few extra spares, like fuses and
connectors. Modes USB,LSB,AME and CW. Covers 1.6-30MHz. Weight is 62 lbs
The remote head is the digital GRC-955. All finished in light flat
military grey. This is unit sold for over $12K as the RT1227/URC92.
I have jpgs for those interested. For more info contact me direct.
This is one serious radio.

Let's not get hasty here. The 211 is "famous" for it's PLL problems. The solution is to take a short piece of wire and pass it through one of the riveted feed throughs on the board. Solder on both sides, cut wire. Do the same to every other rivet feed through and the problem will never occur again. Costs only time.

1367. Does anyone recognise this radio chassis ...??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-19 00:00:00 UTC
From: Geoff Darby <monitech@freeuk.com>
Message-ID: <PYeB4.516$pQ5.18249@nnrp3.clara.net>
Source record: 83271

Hi all. Thanks first to those who responded with regard to putting a Multimode II onto 6 metres. I have now come by another radio in much better condition which may also be a suitable candidate for 6m conversion. The trouble is, I don't recognise the chassis at all - and I thought I'd seen them all in a professional capacity over the years.

It's model is POL MAR SS120. That's no typo - it really does say "POL" in one little box, and "MAR" in another. It uses a ' 5106 PLL ic and has 9 loop mix down crystals at around 11MHz - 3 for each band - located on a sub pcb which is located vertically behind the front panel.

It has a further two crystals at around 8MHz which appear to mix down with the 35MHz vco to produce the 27 output. These are located very close to the front panel, to the right of the 9 crystal pcb.

The radio is 120 channel AM / SSB only. If anyone recognises the chassis as something else, or has a circuit diagram, or even a block diagram, I'd love to hear from you. Please e-mail direct

monitech@freeuk.com

Thanks in anticipation. Regards Geoff G7RTC

Hi, have for sale a Yaesu FT-290R MK II 2 meter multimode radio. Will
also include the optional battery pack with nicad charger.
The radio is in very good condition and has bery little use for backup
to my other 2 meter multimode. The radio is cw/ssb/fm and does not have
the optional tone encoder which I believe is still avialable. Price is
$300 plus shipping from Anchorage, Alaska 99516.

The radio puts out 25 watts with the detachable amplifier and 2.5 watts
when using the detachable battery pack.

One of the big arguments FOR the LEO's was the theoretical short propagation delay to and from the satellite. Unfortunately all the fancy digital vocoding technology and the inter-sattellite linkage works against that goal. I used an Iridium phone and found the delay was quite annoying. I will admit it was just about as bad as other terrestrial digital phones (PCS CDMA) which is one of the reasons that I am still an analog cellular user.

Hey Jim,

You're right, 1/2 watt won't do too much but the fact that it runs forever on the lithium-ion battery is a plus. I used it for monitoring my local repeater. When I needed more power, I grabbed the Motorola. It's more of a novelty radio, but is fun to own.

1391. Re: Iridium shutdown

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-19 00:00:00 UTC
From: John Bohnovic <bohnovic@att.net>
Message-ID: <p8f8ds8v2o53ket20usap0jn1acq8cvfl6@4ax.com>
Source record: 83320

At one time AT&T used satellites for domestic telephone calls. The propagation delay was too long and caused user confusion. Users were used to being able to respond quickly to the party and the other end. With satellites there was a 250 millisecond delay and this is what caused the confusion. Both parties would be talking at the same time. Not many subordinates want to talk on top of their managers.

AT&T then went to a hybrid circuit configuration. One direction of the call was handled on a terrestrial facility and the other direction went via a satellite. This didn't work either as customers still complained of the delay.

Iridium users had the transmission delay plus they had to orient the antennas, after finding a nice clear shot at the bird. And, for all of this they had to pay a higher price to use this service. Now, how many people on this earth would do all of this? Not many.

Iridium may have looked good to the design engineers, but the users didn't buy it.

Just my opinion on this subject..de John/K4WJ

I'd like to bring everyone up to date on my follow ups with users of the newsgroup with this subject.

I've written emails to the four people that has responded to Gene's request to find out why they recommended XPWare or PkTerm. First, I'd like to thank both Jim and Roger for responding and clarifying that they weren't recommending it OVER PKterm, but just recommending it since they have never used PKterm and just liked XPWin..

Also, as I've written here before, when it comes to Windows 3.x based software,. XPWare is the way to go. PKTerm and Pacterm 98 are 32 bit software programs that don't run under Windows 3.x.

As for the other two emails, one bounced because of a fake email address and the other never responded publicly or privately to line he wrote that said PkTerm = buggy. If I don't get information about issues, I can only assume they never existed, or it was because of the lack of knowledge of how proper Windows based software works.

CSS is dedicated to making the best ham radio software at a fair price. The only way to do this is to get the input of everyone we can, on how to continually improve the product. And I thank every one who has done this so far.. your input is so valuable to us.

Source record: 83323

19-07-1998 Band expansion 50-999 MHz for IC-W21

The Icom IC W21AT handi-talkie normally receives two bands: 136 to 174 MHz and 440 to 450 MHz.

You can program it to receive 50 to 300 MHz and 300 to 999 MHz.

To do this, turn it off, then simultaneously hold down the # and the B keys while turning it on. Keep them pressed for 2 seconds after turning the rig on.

The LCD display will go through a self test, and you'll then have a wideband receiver. It's not very sensitive far from the ham bands, but it's handy for listening to 6 Meters or as a portable scanner.

Note that this modification does not require any cutting of diodes or rewiring -- it's entirely front panel.

19-07-1998 Full cross band repeater operation

This feature enables HT to receive on one band and retransmit the content to the other band. You can even choose tone squelsh selections, repeater offsets and many other features available during normal operation.

Select frequencies on VHF&UHF and options (tones, DUP,...);
Set "key lock" by pushing [F]+[C] keys. Then turn radio off;
Push [F]+[MONI]+[RPT-M] keys and while holding them pressed, turn radio on.
You will get flashing "L", telling you cross band rpt. is enable.
Press [F]+[C] ("key lock" release) and you will clear the cross band rpt. mode.

19-07-1998 Receive only expansion for IC-W21

Turn radio off
Press [B]+[#] switch and turn ON radio.
Depress [B] and [#] only when the display shows all functions and the radio emits a beep.
Go to SET mode and a new function will appear after TONE selection.The new function is designed by PL. Set PL to "1"for 1 MHz frqcy. enter, to 10 for 10 MHz frqcy. enter and to 100 for 100 MHz frqcy. enter resolution.
Note1:
This modification does not reset information saved on the CPU.

Note2:
Frequency range is 50,0-107,995 MHz FM
108,0-135,995 MHz AM (aviation band)
136,0-299,900 MHz FM
for the VHF portion;

300,0-999,900 MHz FM for the UHF portion.

19-07-1998 Transmit expansion for IC-W21

Call Icom Parts Dept. and order one diode MA132WK (D.23) for IC-W21AT,
Symbol: MU;
Open radio and localize the logic unit;
The logic unit is the half portion of the radio that contains the CPU,
display, keyboard, etc...;
Localize some orange colour components in the lowset right part of the
portion, below the CPU shield plate. Localize the smallest orange colour
component. Note a empty place for a surface mount diode (3 dots) near this
orange component (see draw below);

```
------ : . <---- Empty place for surface mount diode MA132WK
|oran- -----------| | DIAL button
| ge / :<>. <---- Surface mount diode | CPU | |
----- / mounted | Shield | | U vol button
^ | Plate . |
| . . | V vol button
|Smallest orange colour component ------|------------|
---PTT,F,Moni..
```

Add D23 MA132WK diode in the empty place. Do use very fine soldering iron
and temperature controlated gear. The circuit is very fragile and may burn
if excecive heat is applied. Take care for static damage also; If you can,
use professional gear for this purpose or find technical assistance of your
choice.

^

The above from: http://www.mods.dk/ the best ham radio mod site on the
net.

cheers

Hi,

I'm plannning to write one computer control software for ICOM 8500.
But I doubt that the command table in 8500 user manual is a complete
list.
Anyone can help me to find the complete list of command like ICOM
PCR-1000.
In such I maybe decode DTMF, CTCSS, auto record while sqelch is open
like PCR1000.
Please help me to find it!!!

If you have recently sent me a note of interest on the following piece of equipment and not received a reply..please send me another email. There was a forwarding problem with my service provider.

Anyway....the equipment is:
Ameritron Antenna Tuner:
1500 Watts
Mint Condition
$250.00 Firm - I was told this tuner still sells new for abt. $ 350.00 to $ 400.00.
You pay shipping - or you can pick it up - QTH is Columbus, Ohio
First email that offers to send check gets it.

Thanks,
Gary, K8BY

> shielded, which says to me that it could accurately measure SWR up to
> 225MHz.

I put mine together in 1966, but if I remember right that's not a shield,
that's the center conductor itself. Note the two solder joints at the
connectors; IIRC the instructions had you wire a small wire into the
SO-239 center pin, then bend it and push the tube on over it, then solder
the wire to the tube.

The readings from mine compare favorably to Bird wattmeter readings and
readings from much more expensive SWR bridges up to 225 MHz. Don't know
if it goes higher.

Hi all
I looked at a MFJ 941E tuner that is an open box special at $93.It reads power in average not peak.Is this a down fall ?How good of a tuner is the 941E?I would like to stay around the $100 price range.
I also seen a MFJ 204B antenna bridge that was used for $30.Is this a reasonable price?Would it be useful to me for tuning home built wire antennas?If not what would it be used for?Thanks to all that reply.

Beginning 3/27/00, we have a new FCC Form 159 (Remittance Advice) to use.

And there's a new FCC Commission Registration System (CORES) and forms to acquire your new FCC Registration Number (FRN). The FCC now wants us all to obtain FRN any time we contact them...

All this information - and FCC forms - will be available on my GMRS Licensing Page tomorrow, 3/20/00, at

http://www.clintbradford.com

We will also post an answer from the FCC to the question: "Isn't it redundant for individuals to file their Social Security Number and now obtain a FRN?"(*)

Clint Bradford
909-681-6210 - Office (Riverside, CA GMT-8)
http://www.clintbradford.com

(*) - Most entities that have previously registered with the Wireless Telecommunications Bureau's Universal Licensing System (ULS) will automatically be registered in CORES. You will NOT be required required to register with CORES again. Those entities will receive a registration letter concerning the conversion to CORES and FRN. But you WILL need to send in a new form - the 162 - with ANY payment you send the FCC (in addition to the new 159).

At least in my case, I think the problem is solved. I went over all of the extremely smooth battery contacts with a small piece of medium emery cloth. Now, when the cells are inserted, they go in with a reassuring "grind". My ni-cd and ni-mh cells are now performing to expectations.
-Ken

In repeater-rich areas, that 0.5W may do the trick. You'll have to
figure that out yourself, based on the repeaters near you. For group
outings, a half watt is enough for a half mile between hikers/skiers,
which is why I like the VX-1R. It easily fits in an upper pocket of
my ski jacket, and keeps me in touch with the rest of my group. A
car-based cross-band repeater rig can help get your signal into the
deeper pockets of a ski area (in theory - I've not tried it yet).
Don't expect TOO much from the low power, and you'll be fine. Those
tiny HT's are just the greatest toy, IMO!

Stan,
Go to the website www.onelist.com and register.
Then type the word YAESU in the search box. The results will turn up 17 lists specific to Yaesu.
One of them is named YAESUVX5. Click on the link and follow the instructions.
You can also do a search on VX5EVE. This list is devoted specifically to the Eve software used to program the VX-5R.

Hoe this helps.

Hopefully this will work for you in Taiwan... what I did is call ICOM
and ask for a copy of the CI-V protocol manual. They sent me a photocopy
of it free of charge. (Don't count on the free part, though... I was
very surprised at that!)

OK, now with all that beeing said about debit and taxes, did anyone TRIED to talk to them ?!? The idea of burning the whole stuff is redicolous, and I wish many HAM guys would talk to them to see first IF IF there can be anything done to donate it to the HAM community. TAX laws and stuff are there, but they can be changed and there are exeptions to them. I'm no specialist in any HAM stuff, in fact I do not know anything about it, nor I do know about tac laws, but I think it's up to you guys to at least TRY.

Imagine you guys 'own' a SAT network which is operated by individuals like you. Imagine the popularity Motorola gains in case this would work out. I guess they are open to new ideas if you talk to the chairmen. Imagine, you guys saved 1000's of life somewhere in the world during an earth-quake by making communication possible.

I might be just dreaming, but why not try.

Excuse my bad english, greetings from Germany!

Hi,

I'd like to get some recommendations on the easiest to use dual-band HT. I currently have the Yaesu FT-50 and setting power and the squelch is a real chore. I hate that "menu knob". If anyone is intereseted in buying my radio please drop me a note.

In the meantime, can anyone recommend an easier to use HT?

Thanks
David

Leaving stuff up there (as floating space junk) isn't optimal (long term).
Orbital debris is compounding at 5% annual rate. At this rate, it will
eventually lead to unfortunate/expensive accidents. It also incrementally
adds to the really tiny chance of a major space junk cascading collision
catastrophy as well.

One of the best articles I've found on space junk is at:
http://www.space.com/space/launches/spacejunk2.html

Some sites on Space Junk:
http://sn-callisto.jsc.nasa.gov/orbital_debris.html (Orbital Debris Research at JSC)
http://www.aero.org/cords/sdbasics.html (Center for Orbital and Reentry Debris Studies)

They say you can't freeband the new ones?! I used EVE
programming software and attempted to load a raw VX5r file into
the ft-50. started to load but locked up almost instantly. coul
not turn off or reset. I then used Yaesu software and continued
to load my rdf file. when radio turned back on weird numbers
where on the display. YOU CAN NOT SCAN IN 440-500. but memories
in that area are fine. tx is from approx. 120-180 380-515 more
info can be found by emailing me at jparks27@rescueteam.com BTW
Serial number is 9g (*not more than 3 mo's old)

1462. WTD: RTTY Interface & "On The Air" lighted Sign

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-20 00:00:00 UTC
From: radiodoc37@aol.com
Message-ID: <20000320175545.00654.00002139@ng-cl1.aol.com>
Source record: 83191

I am looking for a RTTY interface for HF, A multimode unit would be ok except my primary interest is in RTTY and AMTOR and not Packet. Let me know what you have, A dedicated RTTY unit would be fine or a PC or dumb terminal based unit. If you want to Swap-- Look at my List here of Items.

Also looking for the "On The Air" signs that light up when you Key your transmitter. There was a fellow who made them out on this NG, Please contact me if you have one.
Thanks

This is a late model IC-756 S/N 399X less than 10 Hours of use. 160-6m
100Watts, spectum display, DSP, keyer, the works! It's a fantastic
radio on transmit and receive. Comes as you buy it new, in the original
box, manual and mic.
I want $1495. Still under warranty!
Thank you, 73 Chris VE3NGW/W4 Florida.

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

Since I bought a new ICOM 756 PRO, I'm selling my FT-1000MP. About a
year
old, and is like new. Include manuals, handmike (still in box, never
used), and
a small plastic bag with all the accessory plugs, etc. Has the INRAD mod,
and
includes a 2.0 ssb filter. This Radio has it's own AC Power Supply built
in, so
you don't need to buy a DC PS. It will run off DC if you like, or need
to.
Shipped in Factory cartons. $1995.00. de Bill, WA4VAF,
Ph. (704) 545-9368.

I just registered for "FREE" unlimited HIGH SPEED (DSL) Internet access
that lets
me use my everyday phone line. With DSL, you can talk on the phone and
surf
the net at the same time. With Free DSL you are always connected

Hello all:

My Heathkit HW-101 transceiver is having some trouble on the 28.000 to 28.500 band. I suspect the crystal or the crystal holder. The received band is intermittent. I once took the crystal out and looked at the holder. It seems as if the last owner "wallowed out" the insert where the crystal leg goes. I tried to fill in the gap by using AL foil on the leg and inserting it into the holder. It worked for a short time then nothing again.

Any suggestions?

Curtis Scholl

Most likely the crystal holder was 'wallowed out' from constant changing
with another crystal---TO GET ON THE CB BAND BREAKER BREAKER BROKE C'MON
SKIPLAND... best just to replace the holder. Those HC-6U holders are
fairly easy to find. Maybe, with the use of a small screwdrive you can
squeeze the prongs together to get a tighter grip on the pins. Maybe
you can desolder one end of the pin and straighten it in order to push
it through the holder to squeeze it together with pliers---then replace.

Sincerely

The problem with this idea is that these satellites aren't at all like ham satellites. Ham satellites are tossed into space and just coast around at will. These satellites are incredibly high-maintenance. They have to be oriented just right, they have to be kept spaced the right distance apart, they have to synch with each other and the ground stations... these aren't omnidirectional repeaters or transponders. I seriously doubt ANYONE in the ham community (or even let me go so far as to say EVERYONE in the ham community together) could amass the resources, time, and effort required to keep that constellation properly aligned, oriented, positioned, and synchronized to be of use. We aren't talking about simple machines with simple programming protocols. Sure, there are lots of folks who could "do it for one satellite", but with such a coordinated, interlinked constellation, would they have the time to do it for the whole fleet? And the way they were designed, e.g., to work as a fleet, would pretty much make any single satellite (or even a small subgroup of the birds) pretty useless for what they were designed for.

Would Motorola donate one or two of them for purely experimental (e.g., not "real communications") purposes? This indeed might be a workable proposal and might be worth pursuing. But don't be fooled into thinking that we could obtain the donation of a fleet of Phase 3D birds, because the Iridiums are as different from traditional hamsats as the internet's fiber-optic-based digital packet switching network is from a 2meter mountaintop repeater.

$0.02.

Hi All,

I am in desperate need of a schematic and parts list w/ numbers for the
Agrelo DFJr. antenna array. The J. Agrelo story is just too painful so I'll
spare you the details.
Thanks to Steve, WA3SWS for the info he sent me.
This unit had RF applied to the RX port and the little rx amps are blown.
Looking for those parts numbers.

Any and ALL help is greatly appreciated!

David:
I too have an FT-50, and LOVE the thing.
However, my first dual-band hand-held was the Yaesu FT-530. I loved
that rig. Now, I use it with a 50 watt d/b amp for my base. I
recommend this radio highly, because it is a good size, has many
buttons, operating is a sinch and, hey. I just like the thing!

From: pitre@azstarnet.com
Message-ID: <38f2e0de.420921541@news.azstarnet.com>
Source record: 83214

FT-10/40R FEATURES

ï¿½ A16D 16 Key DTMF with DCS enc/dec, CTCSS enc/dec, ARTS, 99 Channels.
ï¿½ MIL-STD 810 Rated
ï¿½ Full 5 watt
ï¿½ Battery Charger for all size batteries compatible with FT-10R
ï¿½ Auto Range Transpond System (ARTS), This new system alerts you visually and audibly when a companion handheld is out of simplex range. A built-in CW ID is also included.
ï¿½High Output Audio High technology speaker design produces higher output even with it's compact design.
ï¿½ Alpha-Numeric Display 4 Character Alpha Name can be used to name your memory channels.
ï¿½ Digital Coded Squelch Included to allow quiet monitoring of busy channels.
ï¿½ Direct FM Improves packet performance and voice quality.
ï¿½ Dual Watch, Allows you to monitor an in-band sub channel for activity.
ï¿½ High Speed Scanning.
ï¿½ Top Notch multifunction control knob.
ï¿½ RX / TX Battery Savers, The FT-10/40R includes both transmit and receive battery savers for maximum battery life.
ï¿½ Omni Glow Backlit LCD Display.
ï¿½ 4 Power Output Levels, Low 1, Low 2, Low 3 and High Power levels are selectable to extend battery life.

What I have for sale:
FT-10R A16D 16Key Radio w/ AC Adapter
MH-34B4B: Speaker Microphone
E-DC-5B: DC Adapter w/ Noise Filter

Extras:
(1) ADMS-1B PC Programming Software allows quick and easy programming with your PC including data cable
(1) Foam padded full cover with belt loop

The average price I have seen just the radio forsale is $350. The microphone and DC adapter are around $30 each.
I will sell everything listed for $275.
This is a very lightly used radio. I am selling because I decided to go with a mobile radio instead.

Please email pitre@azstarnet.com with any questions or offers.

Cross-posted to:
rec.radio.amateur.equipment,rec.radio.shortwave,alt.ham-radio.hf,alt.ham-radio.ssb,rec.radio.amateur,alt.ham-radio.marketplace

Product Announcement
For immediate release
March 20, 2000

Timewave Acquires ANC-4 Noise Canceller from JPS.

Timewave Technology Inc. has acquired the rights to the ANC-4 Antenna Noise Canceller from JPS Communications, Inc. The ANC-4 uses null-steering technology to eliminate noise from power lines, electric motors, and home electronic devices. The versatile ANC-4 can null strong interfering signals and peak weak signals by combining signals from two antennas.

Inserted before the front end of a receiver or transceiver, the ANC-4 is an excellent complement to Timewave's industry-leading DSP-599zx post-detection signal processor. The ANC-4 can wipe out S-9 line noise while the DSP-599zx can reduce random noise, eliminate heterodynes and slice adjacent channel QRM.

The manufacturer's suggested retail price for the ANC-4 is $199.00.

Timewave is beginning production immediately and expects to ship the ANC-4 to dealers by May 10, 2000.

Timewave will service and support ANC-4s that were manufactured by JPS in past years.

Note that the ANC-4 is the only product Timewave acquired from JPS. JPS exited the Amateur Radio market in 1999, but remains actively involved in the commercial and government land mobile and telecommunication markets.

For further information, contact Timewave:

sales@timewave.com

www.timewave.com (to updated with ANC-4 information over the next 30 days)

Hello group, has anyone the compactron adaptor, Hickok part # 1704
that they can part with reasonably ?

This allows you to plug into the TV-7 tester tubes like 6LF6, 6JE6C, etc.

I will pay 20 dollars delivered to New Jersey for a good,
completely working one.
I had found one last month but it arrived broken and worthless.

Please respond privately if available.

Regards,
Joe Pratt, Tubecntral@aol.com

Subject says it all...

I'm looking for older electronic musical equipment, BROKEN OK.
Prefer gear with lots of controls but will consider anything.

Synthesizers, keyboards,
effects racks or pedals
drum machines
sequencers
vocoders
any old patchable modular or analog synth
Roland TB-303 Bassline
TR-808 and TR-909 Rhythm Composers

PLEASE RESPOND PRIVATELY AND INCLUDE PRICE AND CONDITION.

Thanks in advance.

Examples of some of the things I am looking for:
Strider DCS
Steiner-Parker Modular
Jellinghaus Yamaha DX-7 programmer box
Roland CR-78 Compurhythm
Con Brio ADS 100, 200 or 200R
Steiner Synthacon
ARP Sequencer
much more!!

Looking for a manual and schematic for a Heath MT-1
transmitter. The BAMA doesn't have it, and all I've
been able to find on-line is a fuzzy schematic. Yes,
I'm aware of manual vendors like HI, W7FG, and so on.
I'm hoping one of my fellow hams will be kind enough
to provide me with a photocopy. I am always willing
to pay postage.

could some help me with these rss errors im trying to program a
motorola radius p200. I keep getting error 011,001,and error 016
I am using a 486 computer running at 33 mhz I thought that was to fast
so i used moslo to slow it down to 12mhz and I still get that error
I am starting to think its the radios eprom some times it reads the
radio data and I can view the code plug then when i try to send
information I get serial bus error could anyone help me with this
problem or tell me how to fix it if its the radio.

thanks in advance

1543. Anyone using Alinco EDX-2 antenna tuner in mobile?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-21 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <EKNB4.38$O44.3049@dfw-service2.ext.raytheon.com>
Source record: 83241
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antennas

Are you using the Alinco EDX-2 antenna tuner in a mobile installation (in a car or truck, that is)? What kind of radiating element are you using? How well does the unit work? Any problems getting a match? I'm interested in operation on 40m through 10m, although 75m would be nice to have for emergency net communications also. I have a DX-70T and am considering the EDX-2 to load a 102" steel CB-type whip antenna, fed with a single wire feeder.

Hi Ted,
The primary reason for bringing our radios along with us on our trip is to keep in touch with each other if we get seperated.[You go shopping and I will sit in the park.] The second reason is for emergency use. Hams are very eager to help out someone in distress and its like having a friend wherever you go. We will be in Europe for 6 weeks so we will have plenty of time to see everything we want to.

As for taking pictures , postcards are better for remembering places and the only pictures we take are of us at some scenic spot or memorial.
Randy, kr6rc

From: Randy <kr6rc@arrl.net>
Message-ID: <38D7B3F3.D76ED40C@arrl.net>
Source record: 83245

Hi Jim,

My friend hooked up his VX-1R to a quarter wave mag mount antenna on his car and uses it for his mobile radio. It gets into most of the repeaters here in San Jose at full quieting. A half watt is plenty of power for most communications. The recieving ability is much more important. You can't work them if you can't hear them!
Adding an aftermarket antenna will greatly improve its range. The wire whip ones work well for me.
There are some software mods for the VX-1R on the internet so you can modify your radio with software instead of clipping diodes. Thanks Yaesu. Try here;
http://www.icongrp.com/~sllewd/vx1rmain.htm
My wife and I both have VX-1R's and we use them regularly .It's a great second radio [cheap $160 HRO] but I always reach for it first.

Oh yes, definitely possible. I replaced mine a few years back. It is a solder-in type, so you will need something like the 272-1141 miniature lamp from Radio Shack (12V) with wire hookup leads. I remember it was quite a chore, though, carefully de-soldering the old one and replacing it. Just take your time and be careful with all the wires when you have the front panel loose.

Good Luck!

I am taking orders for 4cx400/gs36b Svetlana nos Russian Military tubes.
The price is $85.00 plus shipping per tube. These tubes are in great
shape and have never been used.
I also have in stock several matched pairs
of 4cx800a/gu74b Svetlana nos tubes. These are the tubes for the Alpha
91b/99 QRO-2500, the Acom-2000, and the Emtron amp from Australia. The
price on these matched pairs is $200.00 plus shipping. This is a great
buy on these nos unused tubes. A single 4cx800a from most places will
cost you $175.00 to $190.00, but these are matched pairs for about the
same price as a single tube. These tubes carry a 90 day warranty from
the Russian distributor.
Thanks for your time.

>panel off because I couldn't figure out how to remove the tuning knob.

WHOA! Don't pull the front panel! Just remove the two screws that
hold the vox switch at the top-left of the front panel. The bulb is
right behind the s-meter, immediatly below the switch. Full
replacement access is right there.

Wow, this brings back memories...

Not that I'd put it on the air or anything.... But one time I picked up some
of the old 6-channel CB sets from RS. These were mobile units, and
used crystals. I just hung an 'L' network in there (Actually, I used an antenna
tuner that had one variable cap to ground, and another in a series LC
circuit to the other SO-239, and tuned it around. I didn't have any
counter at the time, but I could sweep it all over the place on receive.

Another issue is their interference to radio astronomy. This had been an item of ongoing negotiations just settled last year with the astronomy camp having to accept large amounts of out-of-band interference for some portion of the day and Irridium sats to operate in some mode that reduced interference for the remainder.

Its one thing perhaps having some telecom giants threatening to litegate radio astronomy out of existance and its quite another thing having us do it...all just to envigorate our hobby.

Peter
WB2MJG and amateur astronomer (but not radio!)

WTB 1KW Output Amplifier

Looking for a GOOD amplifier in the 1KW output class and in the
$450 price range. Also considering the Alpha 374 (3 tube).
Please send a description of what you have available, condition,
model, location, etc. Can pick it up in Arizona, Las Vegas, San
Diego, etc. I am amp-less and ready to buy.

You're right.,..but you just scratch the surface.

Motorola doesn't own them...yes, /\/\ had 18% share of the assets &
liabilities, but Iridium LLC, and its international partners are the
owners, and now must work out liquidation with the bankruptcy
courts...the assets are not theirs to give away.

On the technical side, this is an orbiting cellular system..with
digital modulation, cellular-like protocols and hand-offs, etc., etc.
The phones operate in the low microwave frequencies. To use these
things, you need the handsets, you need the protocol, you need the
smartcards that enable the handsets to be registered with the system,
etc. You need ground gateway stations to link the constellation with
the wired world.

It's simply not an amateur operation (no pun intended). It indeed
would be a shame to see all this real and functioning technology be
de-orbited, but right now that appears to be what is happening.

Maybe McCaw will come around again, or another entrepeneur, and offer
the banckruptcy courts pennies on the dollar to save the system. This
was truly a workable technology, which unfortunately could not survive
because of an outdated and inflexible marketing plan.

Watch for the satellite phones and pagers to begin showing up at the
hamfests!

1595. Receive Audio: FT-2600M vs IC-2100H

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-22 00:00:00 UTC
From: mjlinden@mcs.net
Message-ID: <8b9am3$109j$1@lnews.mcs.net>
Source record: 83129

I'd appreciate input from folks who've used either the Yaesu FT-2600M or the Icom IC-2100H on the quality of each units receive audio. In particular, I'm interested in comments on the fidelity of the sound through the internal speaker (how much distortion, can it be understood at high volume levels, is it annoying, etc.). I'm leaning towards the FT-2600M which has over three watts of receive audio (per QST's review), but I'm a bit concerned about the capabilities of its small speaker. The car the chosen radio will be going into is small, so an external speaker is not really an option.

Thanks for your input!

73's, Michael N9BDF

1596. Want R-390A

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-22 00:00:00 UTC

FS Kenwood TS690S/AT

160-6M (auto ant tuner through 10M), all mode
1.8 Khz SSB filter
270 Hz CW filter
CTCSS encoder
DTMF mike (as well as original hand mike)
2 DC car power cables
Matching speaker and power supply
I'll throw in a like new Vibroplex paddle and MFJ keyer
All manuals and most original boxes

I am the original owner of this nice HF rig. Spent many nites and weekends enjoying ham radio. I moved to Baltimore into an apartment (from NC) and now just don't have the ambition or time to do covert HF. This is a nice rig, with just some barely noticeable scratches on the top where I laid the ps/speaker. The only other problem I know of is the front speaker jack is not working (didn't have the heart to open the hood - in fact, its never been opened up and I haven't put my hands inside). This would be a great starter HF rig and you get 6M to boot (and can work 6M FM repeaters as set up plus you get SSB/CW on 6 as well).

$750.00 (see ebay and know this is a very reasonable offer considering what you're getting). Package only, I will not split.

Note: pickup only West Baltimore (Owings Mills, MD). I will consider meeting you half way.

TNX DE N4SJW

Wow...I love my FT-50 (and its commercial brother, the VX-10).

I do not know of another amateur HT that, while holding in your left hand, one can adjust volume, change channel, turn on the lamp, key the mike, open the squelch - and more...all with only using the thumb of your left hand. It's an ergonomic joy to use.

>is intermittent. I once took the crystal out and looked at the holder.

Two thoughts come to mind.
1 the crystal may be intermittant. They sometimes make poor contact internally. This can occur if the hermetic seal is damaged, and the crystal contacts have oxidised inside.

2 the oscillator coil needs tweaked. if you tune to peak oscillator output, the circuit becomes hard to start, and sometimes will oscillate only intermittantly, dependant on temperature and voltage changes.

>

Well Micheal I own both. The speaker on the Yaesu is not sufficient if you plan on having the windows down in your car. You will need an external speaker. The Icom speaker certainly sounds louder. The Yaesu does a better job with intermod. I owned the FT2600 first and used it for 2 mos. I got the ICOM second, when I started to drive around with it in the car I noticed several areas that the intermod was bad which I hadn't noticed with the Yaesu.

The Yaesu will loose it's memory for no reason. E-mailed Yaesu and they said a fix is coming soon. So plan on buying the software for cloning, or plan on spending a lot of time programming.

Other operators say that my voice is clearer on the ICOM. But the Yaesu has more power and does seem to transmit further. I cannot get the "60 watts" Yaesu say's the rig is capable of but maybe my meter is off. (55 seems to be the max)

The Yaesu's mic is easier to use, and radio comes with a 9 pin connector for packet. The ICOM was 50 bucks cheaper and works well so I am happy with it.

I don't regret buying either. The Yaesu is good but the memory problem is a pain but since I leave it in the house I can re-program it fast. I never heard intermod on the FT2600M so when I got the ICOM and heard intermod I was surprised but if the squelch is turned up you cannot hear it but then I miss out on a couple of repeaters that are fringe.

Hope this helps please feel free to e-mail me for further questions

Go to kenwoods site and download the manual for the radio! The manual
is for a tm-541, but the rest of the radio are supported by this
manual. It has the pinouts in it....

ftp://216.98.255.24/Amateur/Instruction%20Manuals/TM541A.pdf

You will need to get Adobe Acrobat Reader to view this manual.....

1625. Re: What is wrong with a crystal in my HW101

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-23 00:00:00 UTC
From: Jim Ford <n6jf@mediaone.net>
Message-ID: <b6hC4.783$G5.7943@typhoon.we.rr.com>
Source record: 83049
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur

I have a possible cause. If the crystal is in a soldered small can what
often happens is solder flux from the solder that seals the crystal holder
can over time permeate to the crystal blank and make the activity of the
crystal poor also lowering the frequency somewhat because of the added mass.
Sometimes moving the crystal around or even changing the tweak capacitor
makes it OK for a while. I had the exact same problem you described with an
old FT301 one time. What I did which worked for me is to unsolder the base
of the holder and clean the crystal with solvent. After drying thoroughly I
resoldered the can back on and all was OK.

Good luck
Jim Ford, N6JF

1626. Re: NEW! FT-100 MK II from YAESU

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-23 00:00:00 UTC
From: Miller Liu <muller@tp.silkera.net>
Message-ID: <38D9BA05.54995D43@tp.silkera.net>
Source record: 83050

Hi,

You're right! I saw the posting from FT847 Bulletin from Ray W8RD:
<==================================>
The following message was posted on the FT-100 mailing list by Mike
N6MIK from Yaesu
Tech Support. 73, Ray W8RD

----- snip -----

For what it's worth, a ham dealer in Germany is selling FT-100's with
the optional filters and TCXO-8 installed. They have dubbed it the
"FT-100mkII" so as to avoid confusion with the "stock" units also
available at their store. The rumor that Yaesu is about to replace,
revise, revamp or otherwise alter the FT-100 are simply untrue.
<==================================>
Johnny Rico ï¿½gï¿½Dï¿½G
>
> What I heard from a guy from Yaesu is that the so-called FT-100MK2 is
> actually just a regular FT-100 that the dealer equipped with 2
> optional filters and the optional TCXO-8. Not a new rig at all.

1628. What uhf/vhf allmoder to get?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-23 00:00:00 UTC
From: Marco Eggert <m.eggert@arcormail.de>
Message-ID: <38D9E739.7EFBFF81@arcormail.de>
Source record: 83052

Hi folks!

We are looking for a new second hand uhf/vhf allmoder in the 1k $ class.

We took the IC820, the FT736 and the TS790 into consideration.
Which one would you choose? We not interested in CW, so this feature is
not important, though the rig should have 500hz cw filters for PSK31.
Do these rigs have a build in power supply?
Which one has the "hottest" receiver?
What is the output of the TS790 on vhf/uhf?
I found TS790 to be somewhat more expensive on the used market than a
ft736..why? I think it is more modern, but the ft736 can be seen about
everywhere..
Any other hints? Things to look for?

I heard that the FT847 seems to perform very well, but we do not want to
buy/pay a complete HF part we are not going to use.

Thanks for your help!

Marco, DB1KME

You can have any transmit & receive pair that you want.
It's in the manual under "odd-split" memories, page 19,
refers to "separate transmit frequency memories" on page 21.
(RTFM)

Or, if you just don't like the radio, sell it. You should
be able to get close to the price you paid for it. It's one
of the best, if not the best, 2M mobiles ever built.

I have the FTV901R with 6/2/432 modules. I hadn't thought
about
selling it, but I don't really use it.
It's in good condition, but not mint.
I have the manual with schematics.
Been modified to work with my FT757GX, but I could take out
the resistor.
One with fewer modules just went on ebay at $350.
I'm open to offers.

1634. HEATHKIT Ham Station Forsale

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-23 00:00:00 UTC
From: "Mr. 137" <ac137NOacSPAM@iwvisp.com.invalid>
Message-ID: <1b30cc5a.ec1f4b94@usw-ex0104-031.remarq.com>
Source record: 83058

I have the following for sale:
-SB300 Receiver

-SB400 Transmitter

-Model HS-24 Speaker

-Model HD-10 Electronic Keyer

-Original "Grab-to-talk" Base Microphone

-Original Heathkit Operators manual and patch cords

-'Ameco'Model PLF-2 Preamplifier

-Autek Research IC Active Filter-QF1

The station was acquired at an estate sale. The only test I could do to this station was turn it on. All tubes inside worked like a charm. I do not have my HAM ticket yet and the HAM's in my town here are pretty tough on me as a CB'er. So I couldn't see if the station tested good on its operatable frequencies. I know for a fact that the unit is not DOA because I've watched the station key and receive on all its Amateur frequencies a couple of months ago.

Anyways, I'm asking $750.00 or best offer plus shipping for the lot. It is in prestine shape. A very nice unit to add to or acquire your first complete collectors Heathkit station.

Photos to follow as I wait for payday to pick-up a battery and a new disc for my camera. If you have any questions, feel free to email me at ac137@iwvisp.com . I'd like to keep this station but I have bills to pay (if you know what I mean). Thank you for looking and 73...

That's what he paid for it at the estate sale. Gotta get something for checking out the filament circuit by seeing if the tubes light up.(All tubes inside worked like a charm.)

1644. What's WRONG with ham radio...?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-23 00:00:00 UTC
From: Gary - KJ6Q <davison7@gte.net>
Message-ID: <Y2tC4.496$QJ3.93250@dfiatx1-snr1.gtei.net>
Source record: 83068
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.policy

I received a personal Email on this subject recently - here it is,
along with my response...

==========

> I've been licensed since 1989 and my interest in the hobby run hot
and cold.
> I deal with a radios system at work every day so, I get my fill of
radios.
> However, I really do enjoy radio. A lot !!!!
>
> When I listen to the ham bands, I hear a lot of interesting
conversations and
> it keeps me entertained. However, the majority of the QSO's are by
men in
> their 50's or older. You can tell by listening to them.
> WHere is the interest in the hobby? HOw do we get young people
involved?

<snip>

You know, back in the 50's when I was first licensed, the discussions
on ham radio were pretty much IDENTICAL to todays as near as I can
recall! Folks talked about their stations and antennas, their recent
vacation, their jobs and their families as well as their individual
locations... SO, the notion that TODAYS subjects of discussion on ham
radio are somehow "different", or geared to "old coots", and somehow
RESPONSIBLE for a decline in new hams is BUNK, and VASTLY overblown!

We used to become drawn to ham radio due to the "mystique" of
electronics, and a means of communication UNMATCHED by anything else
readily available other than a telephone - today there are MANY easily
and unlicensed methods that will do the same thing, with MINIMAL
demands upon the user to employ them. There's NOTHING "wrong" with
Amateur radio - it's just been upstaged by OTHER easily available
technologies and communication means that are more directly geared to
the wants of their respective users - and there's NO WAY we will EVER
"dumb down" or "remanufacture" or "repackage" our hobby into something
it IS NOT! We can't FORCE current users to arbitrarily change their
topics of conversation - and there's nothing WRONG with their subject
material anyway!

Sometimes, activities, devices and pastimes appear on our society -
flourish for a time, then disappear - maybe NOW it's ham radio's
turn...

Gary - KJ6Q
= = = = = = = =
Political destruction of our second amendment,
a new "Boston tea party" in the making...

Heck, just put in crystals for 11 meters and sell it to some
CB/Ham. They will probably pay thousands for that setup...

--> Equipment For Sale <------

~~~~~ See RadioDocs Radio Den at:~~~~~~~~~
http://members.aol.com/radiodoc37/index.html

Yaesu FTDx560 HF Tube Transceiver 10-80 meters,
plastic still on faceplate, excellent condition-
with copy of manual $250.00 SOLD

Alinco DR110, 2 meter mobile, 45 Watts Good Condition $110.00 Pending sale

Siltronics Mdl 90 -6 VFO $70.00

Siltronics Mdl 90 -3 VFO $70.00

Turner Plus Three amplified Desk Mic, Grey Model $35.00

Palomar Skipper 300, Chrome Dome amplifier, 10 meter base tube amplifier. Uses
4 8950 Tubes, Tubes and amplifer in very good condition will swing 400+ watts
pep. $230.00

Kenwood TS520 HF Transceiver, Good condition, witn non-amplified D104 Desk Mic.
Also includes a kit to make your TS520 operate on AM. Kit include AM filter
and instructions. $325.00

Kenwood PB-18 HT Battery 7.2V 1100mAh, Like New in box hardly used $35.00

Kenwood PB-17 HT Battery, 12V 700mAh, Like New in Box hardly used $45.00

Kenwood PB-13 HT Battery, 7.2V 700 mAh, Untested $10.00

Kenwood PB-32 HT Battery, 6V 600mAh, Untested $10.00

Cobra CAM88 Tube CB Base, 23 Channel Working, No Mic but I have the Mic Plug
with it and copy of the SAMs. $65.00

Realistic Navaho TRC-30 Base, 23 channel, Works good $30.00

RT-524 30-76 Mhz Military FM transceiver, Good condition an 8 on a 1-10 scale,
No nomenclature tag (desirable for collectors) Replaced with Serial Tag.
Manuals and original mic. $500.00 See Fair Radio Catalog for more info. Their
Price $625.00-$675.00

Swan 1200W 10-80 Meter Amplifier, Very Clean Condition, Uses 4 6LQ6 Tubes
With Manual. $250.00 Obo Pic will be on the WebSite Soon! Will trade for a
Kenwood TS520. SOLD

Yaesu XF-32A SSB filter for FT101 series, $40.00
~~~~~

Tram D201 Parts, Wood End Caps, Meters, Crystal/selecter Board, Transformers, Face Plate, Knobs, crystal filter, Etc... Inquire with your needs,.

Misc. 24V Switching power Supplies, Cosel, Power One Etc... Most new in the box

Crown IC-150 Stereo preamplifier, Metal cabinet
model with copy of manual $150.00 Obo Reduced $110.00

Midland 79-290, removeable face 10/11 meter AM/SSB/WX
Mobile,dual final design, 5 bands, WX, good condition with
stock mic. $110.00 Reduced! SOLD

Homebrew 3 tube 10 meter amplifier, uses 3 military
versions of the 6146, Seperate open chassis PA and
power supply deck. RF sensing, Plate Load, meter, SSB
and AM. 150-200 watts with low drive $130.00 Reduced to $100.00

Misc. Vacuum tubes (No Sweeps right now) See WebSite

Kenwood TS430, with AM filter and FM board, Manuals, Clean and working Great $400.00 SOLD

Browning Mark III receiver, excellent condition $140.00

Browning Mark III Transmitters, Make one good one from the two units $110.00

The above Brownings can be seen on the website

Icom IC-230 with manual, mic and mobile bracket. not working correctly, VCO unlocks but in great cosmetic condition,, $30.00 Shipped (Pending Sale)

Browning Mark III Receiver, Browning Mark III AM Transmitter, Very Clean! and D104 Mic $250.00 Pic will be on the Website Soon !

Tram D201s, Both have unlocked VFO's, One has lower freqs
with good AM and weak SSB the other has upper freqs with good
AM and SSB. Both in good condition $250.00 Each

Penetrator HB-150 10/15/20/40 meter Mobile amplifier, 150 watts class AB1
Low drive input required, super clean! $150.00

Yamaha FG-460S-12S, 12 String Guitar, Beautiful guitar, near flawless, Gold hardware, Pearl inlay, Seymore Duncan Acoustic Pick-up, Hard Case $350.00

Hooker 10 meter Amplifier, 1 pill design, PEP and RMS mode, CW/AM/SSB, Preamplifer, Clean, still has factory seals $75.00 (Pending Sale)

Pacifc Scientific / Superior Electric 2 Axis Servo System $250.00

Tram Diamond 60 AM/SSB Mobile, SIltronics Model 90 VFO -3 and Paradynamics Meter, All in good working condition $175.00 (Tram 60 Pending Sale)

VHF Trielectric Amplifier 13.8 VDC As Is $40.00

Motorola UHF 13.8 VDC 450-470 Mhz Solid State Amplifier, clean!, Surplus, As Is $40.00

Alan K1313 10 meter Single Tube Modulator, 110 VAC, With Spare 6KG6 tube, New Russian tube installed, Spare is 90% or better, Clean and works Great! $150.00

Johnson Messenger 250 Base, With Original Box and Manual $75.00

Astatic 10DA Mic Head, Works and looks good, Missing the locking Ring but plugs right into a D104 Stand $30.00

Fentone 500C Studio dual crystal Mic Head On a TUG8 D104 Stand, Wired to a Demco Tube Modulator. Smooth Clear Audio! $200.00 Obo

Pentax K1000 35mm Camera, Wide and normal lens, 2x teleconverter. Cokin filter holder with flare guard. Several special effect Cokin Filters, polorizers and acessories, carrying case etc... $250.00 Obo

SBE Trinidad , 23 channel base CB, near perfect condition, original manual $70.00

Fluke 8050A Digital Desktop Multimeter, AC/Batt, needs new batt. but works great on AC $50.00

NF Circuit Design Block Model CR-116 Low Distortion Signal Generator, $125.00 Obo

Misc, Yaesu FT101 Components and parts, Misc untested boards, Email If you need something.

Electrovoice Mic.... See Website!

Misc 19" Racks..... Email for Details

Will Trade For Mustang 5.0 Parts Or??

To see this Equipment and More equipment and Pics go to:

I'm thinking of getting a IC-706MKIIG for use as a base station. Anyone have any idea how large a power supply I would need?

Thanks in advance,
-RC

got my license in 66.
seems to be some problems. Our local clubs have nothing to add, just
some old fellows discussing what we did before, don't want anybody to
start a new discussion. It is almost like senile demente home. So I
don't go to local meetings much nowadays.

we have some VHF/UHF meetings with very much technical discussions,
several such meetings every year, and as some of my friends puts it,
technical interested amateurs goes to higher and higher frequencies to
escape from the crowd

Earlier we had some technical discussions on the bands - particularly 80m ssb, but it was disturbed by breakers, usually they had nothing to add to the conversation, just breaking in when you had explained a technical matter, and the discussion was ruined

I usually overhear the breakers, and was often accused for being unpolite, so I stopped using amateur radio media for technical discussions and this sort activity ceased

Remember I had a very interesting QSO with a G3-stn on 2m ssb, and we talked for some hours, but it was many rather excited persons who wanted to work me from the rare locator. So it seems always difficult to have a discussion on the bands, always somebody breaking and having no interest in the conversation, and after a while we go QRT because we are fed up of all the complaining from somebody who share not the same interests.

Perhaps somebody could start again on 80m, we could have some interesting discussions, but ity must be accepted to discuss a theme without listening to breakers

Hi, everyone,

I have three monobanders manufactured by Tokyo Hy-Power Labs. They are neat rigs, they work well, and I've gotten good reports, but how many rigs for the same bands do I need?

OK, so I have:

TR-110 -- the Amp Supply OEM version, with the darker paint and black front panel with white markings/lettering. The rig is in excellent shape and works well. It covers 28-30 mhz at 20 watts SSB/CW. The previous owner took off the DC power plug and left a pig tail instead, otherwise the radio is unmodified. It comes with the original mic., and copies of the owner's and service manual. It's about the size of a Ten Tec Scout, maybe a bit wider. This is part of a series of ham monobanders, not a rewarmed CB. It has the provision for a narrow CW filter, which is not included. $90 takes this one.

KT-115 -- the Kantronics labeled version, otherwise identical to a Tokyo Hy-Power HT-115 15 meter monobander. The rig is in good shape, but has a number of light scratches on top. The front panel is clean. It puts out about 18 watts key down right now. The rig has one rather clever mod: the noise blanker switch turns off the display to conserve power for battery/portable operation. It comes with an Icom hand mic., the original owner's manual, a copy of the service manual, the original box and packing, and the DC cord. I've reduced my asking price to $120, which means I am taking a loss on this one.

HT-106 -- the rarest of the set. It covers 50-52 mhz at 10 watts SSB/CW, and is in excellent condition. This is the only one which was never imported into the U.S, and I think only hundreds were made. Comes with original mic, manual, service manual, separate HT-106 schematics (different from the rest of the series), and the DC cord. The rig is unmodified. I paid $325, which is about what similar, common 6 meter all modes go for. That's what I'd like to get back. A picture of this rig is at:

http://www.netferrets.net/thp/images/ht106.jpg

Please add shipping and insurance to each, probably $10 for the TR-110, and about $12 for the others to anywhere in the U.S. Shipping to Canada is more, of course, and Canadians must use a Canada Post money order drawn in U.S. dollars. Money order or cashier's check ships immediately, personal check is held 10 days for clearance. Sorry, no C.O.D.s or overseas buyers, please.

Please e-mail me if interested.

Thanks and 73,
Caity

Just another reminder of this upcoming event for the second year in a row on Arpil 22nd! We still have swap tables available, but may run out!

The Eastern Idaho UHF Society will be hosting a hamfest/swapmeet in Idaho Falls, Idaho, at the Elks Lodge on April 22nd. This is an ARRL sanctioned hamfest/swapmeet with full license testing, swap tables, commercial tables, and talks on DXpeditions and APRS.

Main door prize this year will be a Kenwood TM-V7A. Other door prizes continue to be confirmed and will be posted on the web page. So, keep checking out our web page.

We have a web page - http://www.srv.net/~wa4vrv/hamfest.htm

Hope to see you there!

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

Get off the CW kick, already. Don't try to avoid the main issue -
which was your "throw in the towel" response to a perfectly
legitimate e-mail you received regarding how to get more people involved
in the hobby.

Do you, or don't you agree that we should at least TRY to get more
young people involved in the hobby?

YES, or NO?

If your answer is no, then there is no use continuing this conversation.

If your answer is yes, then I put it to you again - come up with
something constructive to try to make it happen... or help those that
ARE trying to do something constructive. Don't put up another smoke
screen.

Hello all,

ICOM IC-260 2m rig has a socket labelled as ACC.
In the manual, the pinout is given, including
4 data and some control signals. Seems like not
very crucial to implement.

Could pse someone remember any possible usage for
the socket?! Seems like there should be possible
to get tuning information out or in, but no protocol is
given and no further information provided in the
manual.

Most possibly it should be a pre-computer age
solution (like comparing AOR-2000 to AOR-3000).

Thnx fr any hint,
Anto,

Yea, "old farts" aren't allowed to have an opinion, and certainly don't belong on one side or the other. Whoever gave "old farts" permission to be on one side of a debate or the other?

Petition the FCC to have a ticket self-destruct immediately upon exhibiting "old fart" behavior. Next thing you know, they'll want the vote!

I am new to amateur radio and I really enjoy what privliges I presently have, I would like to eventually upgrade to extra class but my main goal at this point is to find a way to promote amateur radio to responsible people. I have heard alot of people on the air that are not what I consider very good examples to the new comers.
As a newcomer I just happened to find an amateur operator that was able to tell me what I needed and where to go for the tests, until that time I had nearly lost all interest I had for the last 27 years! One thing I think that needs to be done is local radio clubs need to asure there is more exposure so someone interested knows who to contact.
My point has nothing to do with code but everything to do with promoting new people! I don't want to see this hobby die now that I finally re-sparked my interest enough to get a license!

1679. Super Pro 600

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-24 00:00:00 UTC
From: Randy Weldon <fonedoc@pacbell.net>
Message-ID: <wjUC4.19$ie3.6385@news.pacbell.net>
Source record: 82908

I have some collectable equipment from "the old days" I hope can find a good home. Such as a Hamarland(?) SP-600 Rcvr in working condition with all calibration XTALS and extra tubes (those hot glass things), a CV89 teletype rcvr, a calibration oscillator from the '30s (solid copper chassis, acorn tubes), an old Dumont scope etc, and a roll around 19 inch rack. reply please.

Where do they go?

I talked to the vendor selling the "Zapper." I told him that I thought it was irresponsible and dangerous. There's enough pileups and dead people along the highway without the zapper.

SO - I gather that YOU place all "blame" for the current status of ham radio on *CW* requirements?

Interesting viewpoint, since *MY* comments made absolutely NO reference to CW at ALL!

CW didn't draw me to ham radio - OR slow me down - it was merely another milepost that had to be passed - I passed it, and that was that!

YOU, on the other hand, appear to suggest that all that is evil in today's amateur radio is contained in CW and the remaining old farts still active...

You are DEAD WRONG!

BUT, I guess one excuse for personal failure is as good as another...

1698. TS-520 VFO Warble ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-24 00:00:00 UTC
From: chipster66@hotmail.com
Message-ID: <38dad3a0.2073080@news.usol.com>
Source record: 82950

I've come across a rather well used TS-520 and there seems to be one area in the dial roughly (3.550, 7.050, 14.050 etc) where there's some 'warble' in either signals or the xtal calibrator tone. I suspect a bad ground/contact at that point somewhere in the VFO mechanism ? I've done some repair work in the past but hogging out that VFO and disassembling it looks to be a bit more than I want to tackle .. What are the pitfalls of perhaps a little contact cleaner (WD-40 ?) sprayed up in there ? Or a better 'cure' (new TS-950 ? ;-))

Tnx

I am thinking of buying a Yaesu FT-8100 or a Kenwood TM-V7A. Both are comparable in price, but the abilities of each radio is something I'm having trouble comparing. I've downloaded the Kenwood owners manual and read about all the options the TM-V7A has. But here is my problem I can't find any "HARD" evidence for the abilities of the FT-8100. I know both will cross band repeat and both have dual accessory speaker jacks for 2 speakers (one UHF one VHF). But what else can the FT-8100 really do. I know some of you love that radio so please talk it up and let me know it's abilities. Thanks in advance!

Last try before it's off to auction!
'As new' Motorola 6 gang Visar charger, model NTN7621C for sale. Charges all six radios simultaneously, with status indicators for each pocket. Immaculate except for some scratches on the bottom plate. Works perfectly. New price is in the $700 range. $300 including packing and UPS shipping within the US. Would also consider working out a trade for a UHF BP/BR base station duplexer or UHF GP300. Also have some UHF Visars for sale posted separately.

Three Motorola UHF Visars in very nice '8' or '9' out of '10' condition - just a couple of superficial rubs. High split model; covers 450-520MHz, but I've heard they will program and work fine at 440MHz also. Radios works great, and can be programmed for a tremendous range of functions including scanning, 1W/5W power selectable by channel, PL/DPL, two or five tone alert and voice paging with talkback, various alert tones, and a lot more. Each is complete with good NTN7394 ultra high capacity nickel metal hydride battery, antenna and your choice of either a hard shell snap-in belt holster or nylon case. I can get a few frequencies programmed in for you before shipping. More extensive programming can be arranged for a fee. Will ship immediately when paid with money order or bank check; personal checks OK too, but will hold until they clear.

$300 each or $825 for all three, packed, insured and shipped to you UPS ground CONUS. Will consider a trade of some sort for a UHF BP/BR duplexer, 450-470MHz 75W Micor UHF base/repeater amplifier and/or UHF GP300. I've also got a 6 slot Visar gang charger listed separately.

Thanks,

Phil Barber

Robert,
You can 'get-by' with a 20 amp power supply, but, do your self a favor and get a larger one than that. Too big of a power supply never hurts, too small of a one does. You can always use 'extra' amps for accessories.

The "great CW debate" of the 1990's was an abomination. It was
completely unimportant to the future of ham radio - yet it took up
everyone's time(including the FCC) in dealing with this NON-ISSUE.

Nope, just the ones that debate about the ridiculous CW issue - on
either side of the fence. Thing is, four times out of five, you will
find an "old fart" on one side of the debate or the other.

What the heck are you talking about man?

Can't you say anything constructive? I want to get more young people
into ham radio. You seem to want the service to die along with all the
old farts, because; "it just won't be the same anymore".

horseshoestew,
Hi, I'm one of those 'old geezers'. I have enjoyed this hobby for 30
'some years and have found there are some thaings that never shange.
One of them is that 'someone' always wants things to be easier. There
was the same whinning about the code requirements in 1966 as there are
now, usually, by the same 'type' people, those who want something for
nothing.
I've found that there really are reasons for not being able to learn
Morse code. These reasons are few and far between though. The most
common reason for not being able to learn code is a case of the
"lazys". Enough said about that.
I do not want to keep new people out of the hobby. I also don't want
to
'cheapen' the hobby by 'dumming it down' to a 'communicator' level. You
know, there was a 'communicator' level license, it was called the
"Novice" class. Seems that wasn't 'dumb' enough. When you took your
drivers license exam, did you'get' to skip any of the required
operations/requirements because you had trouble with them? Same thing
you know.
so, enough out of this 'old geezer'. Every argument I've used in this
email was what I heard in the 1970's, so you haven't come up with
anything new... just the same old whinning.
'Doc / W5LZ

You, my man, are stuck in a major rut.

I don't think I can make this ANY clearer. Any debate about Morse Code
is COMPLETELY MEANINGLESS in today's world. You can get rid of the
requirement completely, leave it at 5wpm, put it back at 13wpm, or
raise it to 50wpm - it isn't going to make that much difference in
getting young new members into the service.

Can you climb out of that rut you are in, and try to suggest SOMETHING
USEFUL that will help get youngsters into the service?

Otherwise, take your STINKING RED HERRINGS the heck out of here! It
distracts from useful discourse.

Are you under the impression that typing something in all caps makes it
so?

> Can you climb out of that rut you are in, and try to suggest SOMETHING
> USEFUL that will help get youngsters into the service?

Anything at all would likely be better than your "Comnicator Class"
proposal. It is a doomed bird which will never fly. We already a
simple no code license available to anyone without age limit.

> Otherwise, take your STINKING RED HERRINGS the heck out of here! It
> distracts from useful discourse.

Your record seems to be stuck on the red herring term. One of the neat
things about usenet is that you don't get to decide who has to take his
ideas and leave. The very same freedom which permits you to propose
your ideas leaves us free to dismiss them. You haven't really provided
any useful discourse that I can see.

>-RC

RC,

You'll need a supply capable of 20 A continuous output (which
allows a comfort margin for normal operation). I'd recommend
an Astron RS-35M. I've been using the same one in my station
since 1983. I've had one problem with it in all those years.
The on/off switch contacts froze in the "on" position after
enduring about ten years of heavy use (and ABUSE) from me in
daily service. I put in a new switch ($0.75 at the surplus
electronics emporium) and things went back to normal right
away. Astron... work fine, last long time!

1721. HTX-10 Undocumented CTCSS

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-24 00:00:00 UTC
From: Drew Cohn <007NO00SPAM@planetarymotion.net.invalid>
Message-ID: <0157b774.3854b22f@usw-ex0101-007.remarq.com>
Source record: 82973

It appears that the Radio Shack HTX-10 has an undocumented CTCSS feature. In the FM mode, press the FUNC-4 keys. You will then see "RPT" on the LCD screen. Using a scanner with headphones, I have confirmed this function does indeed transmit a subaudible tone. But I have no way of measuring the audio frequency. There seems to be no way to change the CTCSS frequency, which is too bad, because according to the repeater directories there really isn't a standard tone. Could someone out there measure the tone?

They can easily go way down below the ham bands simply by holding down the
"SHIFT" key when entering the frewquency. You have to enter every digit
including the "ZEROS" Low split will go high and high split will go low.

And you STILL don't GET IT!

MY original post in this thread had NOTHING to DO with CW, or
arguments FOR or AGAINST it - THAT "ridiculous CW issue" is ENTIRELY
of YOUR introduction - go REREAD my original post, and then QUOTE
where *I* made ANY reference to CW...

SEEMS it is YOU who are both instigating and clinging to CW as an
issue against our hobby and older hams - while at the same time
pointing to OTHERS as the "cause" for problems... Perhaps a look in
your MIRROR will reveal much of the "problems" at your QTH... Perhaps
YOU are one of the 4 "old farts" you refer to as CW debaters - *I*
certainly never brought the subject up!

I'm not old nor am I a geezer. I'll admit to stubborn. Then again, I don't see myself as any more stubborn than those determined to turn amateur radio into some radio playland for the people. Morse code never blocked young people from entering amateur radio. It did stop me nor my young friends. In fact it was easily learned by all of us. It is actually more difficult for a young person to get into amateur radio now than it will be in less than a month.

> I'm sorry, but the time for forceful measures is well overdue. While
> the backlash of this fact was felt after the 13wpm reqs were dropped to
> 5wpm - MORSE CODE REQUIREMENTS AND HF PRIVILEGES ARE RED HERRINGS!

This "red herring" stuff (especially with the all caps which mark you as a bit of a wild-eyed fanatic) is getting quite old. Just get off the dime and let us know what the forceful measures are and who will undertake them.

> These subjects are of virtually no interest to most modern technical
> people that would be interested in the hobby - especially young ones.
> It has NOTHING TO DO with getting young people interested.

You still haven't told us how modern technical people are different than technical people of decades past.

Nope, apples and oranges. Driving a vehicle involves life-and-death
situations. Ham radio doesn't. And they do NOT require demonstration
of one's ability to hand-crank a vehicle anymore or use a stick shift.

YOU, fella' are the one "stuck in a rut", and the primary source of CW as an issue in this thread... The ONLY reference to CW in my original, was the comment that CW in earlier times was pretty much a NON-issue as far as entry into ham radio was concerned for most. But NOW, we have a new class of "gimmees and whiners", who seemingly are determined to MAKE an issue out of it, regardless of forum or original intent of those posting here - all the while, accusing *others* of "being in a major rut"...

Wise up fella' - it appears YOU are a major source of your own problems!

Contact cleaner might not hurt, but don't use WD-40. It's petrolium based
(like paint thinner) and leaves an oily film. Use a product designed for
that purpose (alcohol based). Good Luck.

1744. Re: Easy to use dual-band HT

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-24 00:00:00 UTC
From: Andrew Scott <vk2two@optusnet.com.au>
Message-ID: <38da9814$0$18555@news01.syd.optusnet.com.au>
Source record: 83091

i started with an icom ic-w21at this was a good radio but limited in
functionality

i had a ft-50rd which was a great radio made better by the AMDS software.

and then upgraded to a ft-51R

similar functions but the performance and useability was/is much better

size is also nicer, and the ability to quickly change a function and not
worry about the complex menu system is a bonus.

also the ft-51r is a dual bander (two band RX at one time)

the ft-50rd is a multi band radio, can only listen to 1 band at a time,

thanks
andrew
vk2two

You stubborn old geezers. You guys do everything you can to block changes that could bring young people into the hobby - saying it is "for the good of the service". Then, when it DESTROYS the service, you just say; "Oh well, it was time for it to die anyway".

I'm sorry, but the time for forceful measures is well overdue. While the backlash of this fact was felt after the 13wpm reqs were dropped to 5wpm - MORSE CODE REQUIREMENTS AND HF PRIVILEGES ARE RED HERRINGS! These subjects are of virtually no interest to most modern technical people that would be interested in the hobby - especially young ones. It has NOTHING TO DO with getting young people interested.

I proposed an Under-16 "Communicator" license class:

http://www.geocities.com/horseshoestew/communicator.html

While you might not agree with it, I haven't seen anyone come up with anything better that would actually catch the interest of younger people, and get them to join the hobby. Face it - dropping OR raising the Morse requiements is irrelevant - it won't do anything to get younger people involved in the service.

The older guys are going to have to realize that times have changed, and that the service is going to have to change. Technology is changing so fast in today's world that it is RIDICULOUS to think that a technical hobby like ham radio shouldn't have to change - SIMPLY RIDICULOUS!

Hi Randy,

The SP-600 was the receiver I used to get to tune as a 10 year old when I went out to the Air Force Base with my dad and got me started in Ham Radio and a carrer in communications. Always had a soft spot in my heart for one. Could you tell me more about it or give me a phone number and your location?

I will be away from the computer after 3:00pm CST on Sunday for a few days, but can be reached toll free at 888-226-2114.

Thnaks,
Brian

Not sure if you've gotten an answer already. There is a company
by that names that
trades as SPEC. Go to any stock web site, get a profile or news
and that should lead
you to them. They should still be around. They just posted
record earnings for the
last reporting quarter. Good luck.

Help Stop Unsolicited Telemarketing Calls

I lose count of how many times every day I receive another phone call from Telemarketers. If it's not a person on the other end, it's a dead line or silence.

Likely you've received MANY calls that are a dead line. These calls come from Telemarketers using Predictive Dialers. A Predictive Dialer, dials numbers in advance, expecting the next Telemarketer to be free to pick up the call.

If the Telemarketer is free, you get to talk to someone pushing a product or service you don't want and many times won't take no for an answer. However, if no one is free in the Telemarketing group to take the call, in California, state law says they can't play a recording, so you get a dead line. If you go to YAHOO or any other search engine and search the words, "predictive dialer", you'll see that lots of companies make this equipment.

WHAT YOU CAN DO ABOUT IT:

There is a group in California trying to put a petition on the November 2000 Ballot. However, they lack the funds to hire people to gather the 420,000 signatures required.

You can help by going to their WEB Page, printing the petition, signing it, and mailing it to them. (In order to be legal, the petition must be printed on 1 sheet of paper.)

You can also help by passing this email to others in California, ask them to sign the petition, and pass this email on to others. (Do NOT send this email to anyone outside of California, their signature is NOT valid on a California petition.)

You will find information about this petition and the group promoting it at the links below:

http://www.stopjunkcalls.com/teleprop.htm

They had a booth at the SeaPac Ham Fest in Seaside Oregon about two
years ago. I watched them demonstrate the device you refer to.

Used in conjunction with a computer you can enter in the call, and other
data associated with each finger print (during times when stations ID,
or otherwise identify themselves) you take. Each subsequent transmission
by a station finger printed will bring that data up on the screen. It
works great for identifying people that interfere with repeaters, even
if they key up for a very short time, and say nothing.

I have a real nice AST Laptop that I would be willing to trade for your
items you listed below.

This Laptop has the following features:

Model # Ascentia 910n 4/75 CT10
10.5" TFT Active Matrix Screen 800x600 256 Colors
486 DX 4/75 CPU
720mb Removable Hard Drive
1.44mb 3.5 Floppy
8mb Ram
Battery good (LI-ION)
Expansion Port
SVGA Port
Parallel Port
9 Pin Serial Port
PS2 Mouse Port
2 PCMCIA Ports (USR 14.4 Sporster Card included)
W95 Loaded
No Y2k problems
Leather Case

This is a clean looking computer, and everything works.

If you are interested let me know.

I come from an all ham family, 5 out of 5. My father sat with his grandson, who is 10, recently and tried to interest him in the hobby. When we were 10, back in the 50's, it was fascinating, that's the only medium we had. My nephew and most young people I know have no interest in ham radio because they prefer their computer. They don't see the excitement in a challenge. their dx is talking to someone in Australia in a chat room.

Hi, Gang,
My hat is off to Gary - KJ6Q for writing this piece. The subject is a great strawman document to comment on. It touches lots of minds, some good and some bad. But, then, what's new about that? So, I'll add my point of view.

I got my General way back in 1952, at age 16, and held it until 1968, when out of boredom at age 32 I gave it all up. Why? Partly because all I heard in those later days was a lot of SSB stations piling on top of us AM stations who could not afford SSB. Rudeness and swearing prevailed on almost all of 80m in my location. I could not get up on 20m or 10 - didn't have the cash. Lack of cash certainly made the hobby difficult, but the killer was the way the hams acted back then, especially the older hams.

Back then, CW was the only mode you used in order to cut thru the qrm, or static. Even SSB had trouble getting thru, despite what the pros said. But CW somehow made it thru the mess. That is, if you could afford the receivers that had great filters, like the Collins type. The best my rig could do to receive a CW signal was listen to it thru a 2K wide filter. It was a wonder I could pick a CW signal out of the caconophy of sounds with such a wide filter, but somehow I managed. Not all the time, but enough times to participate in the hobby on CW. I liked CW for that reason. Besides, you almost got to know the other person by the FIST he had. Well, at least you could imagine what he was like in your minds eye. In those days, voice, too, was like listening to your favorite radio program. Your mind imagined what the person looked like, and what his personality was like - just from the sound of his voice. And when the band choked up with qrm, you switched to CW and continued the qso. Few could afford RTTY in my town, so RTTY was only read about in CQ or RADIO mags. I was good at CW back then.

When SSB became the way of life, AM was doomed. Especially with my rig. CW, however, was still the only other way hams could communicate - especially with my wide band receiver.

As the years went by, I got on the radio less and less. I had become disenchanted. By 1975, ham radio was a distant memory to me. My license had lapsed several years before, and I never thought enough about it to renew it.

My life was picking up pace in other areas; mad affairs, lots of kids to raise along the way, and oh yeah, a wife. I never gave ham radio a thought. I dumped all my gear somewhere, maybe gave it away, whatever. Who cared. My ham radio memories had left a bittersweet taste in my minds imaginary taste buds.

The years continued to slip by, and I got into electronics in a big way. Won't bore you with all the details, but suffice it to say, I was involved heavily in Silicon Valley startups. Lots of cutting edge technology work came my way. Big thing I got into was computers, transistors, and the like. Made a good livin out of it all, too.

Then, in 1975 I got linked up with a company that made equipment for broadcast television. A new era of learning for me was born. Lots more computer stuff, cutting edge equipment was part of my design and so on.

Ham radio? Who cared. Never gave it a thought.

More years raced by. Then in 1985 I evolved into another area of computing - electronic email. I could instantly communicate over telephone lines to anywhere in the corporate world. And if that wasn't exciting enough, I had a 5 lb cell phone (that was all they had back then) to carry around with me to communicate vial radio to anywhere in the country or overseas. I thought I had arrived.

Where was ham radio? Never gave it a thought.

Still More years passed, and that cell phone shrunk to a size of a brick, then down to something a little larger than a pack of cigarettes. Computers came out of the woodwork in all shapes and sizes. In the 80's it was awesome to have a 486 computer with 50mb of hdd and 5 meg of ram. Windows was coming on strong, and in the beginning of the 90's the Internet was gaining fast as the way to communicate to anyone in the world, albeit, via pokey 14kbd modems attached to the phone lines. Soon, 56bbd modems hit the street, and wow, was the Internet fast! Well, until AOL and the rest of the world got on and slowed the thing down to a crawl. Suddenly bandwidth was the looming issue.

Where was ham radio? Never gave it a though.

Well, in 1994, my xyl of 43 years, who first knew me as a 19yr old snot nosed kid, the same xyl who, when I married her, objected strongly to my ham radio hobby because it "took too much time away from her, and later the kids," that very same person, said to me one day while I was tweaking my latest 3D card in the computer in my home office, Honey, I was reminiscing the other day, and remembered the days when you were a ham, and how you used to take the kids and I on those, what do you call them?, oh, yes, those Easter egg hunts. Remember? Yeah, I said, still tweaking the 3D card software to perfect my latest creation on my Paint program, what's your point? "Well, dear, I think you need to get away from this computer stuff and get your ham license back. You're spending too much time alone in this office working on computers and not enough time with me. At least you took me to those Rabbit hunts and shared some of your time with me."

In the back of my mind, I was thinking, That's not the way I remembered it sweetheart. You practically flushed my mike down the toilet one day. But I kept my tongue (after 43 years with the same woman, you learn some things).

But somehow, she planted a small seed in my mind. I wondered what was going on in the ham radio community. Maybe I should go get a license and become a

ham again after all these years. All I had for a receiver was a small Sony all band unit I bought a decade ago. So, I fired it up and began to listen to the conversations on 80m, and 20m and so on. That little rig could hear SSB real good. Impressing.
I began listening to the last band I used way back in 1952 thru 1968 - 80m. To my amazement, it was like going back in time, as I listened to a bunch of rude, people lambaste one another and swear up a storm at each other - right there on 80m! Again. Do I want to get a ham license for THIS? To be sure, there were lots of so called, "old geezers" mouthing off, but young people were doing it, too.

Undaunted I tuned the little rig to 20m. After a few days, I noticed a more orderly conversation pattern there. I rarely heard swearing or observed rude behavior. Oh, of course, I did hear a few Lids, but it was not pervasive like it was on 80M. This was the band for me to begin my Ham Radio experience on. I went for my license in late 1994. I decided not to fool around and go for the General. I worked hard to get my fist and 13wpm listening up to par. It was a struggle.

During this effort, my mind went back to a day in 1952 when I had to learn to send as well as receive 13wpm for one minute without errors to get my General. Somehow I did it then. But, one of my friends was not so fortunate. Let me say that in high school I was the typical 15 year old with hormones that took over every chance they got. My school work was barely adequate. But my friend, you see, was the school genius in everything. Math, chemistry, language, History, and Electronics. He was as egar as I was to go take his test. He did not have to study for the theory. He knew it cold, formulas and all. He could design by himself, just about any complicated circuit there was. He actually designed on his own a complex receiver and built it, and by heaven, it worked great. Yet, when it came time to take this CODE test, his brain hand coordination did not seem to work well. Not that he had a disability, it was just that, well, he struggled to get even 5 wpm. Like lots of people did, and still do.

My genius friend took the code test 12 times, and on the 13th time he passed, barely, the 13wpm test and got his General. After that, he went on to build his own station and other gear, but never got on CW again. Yet, he was a true ham that contributed to our little community of hams by designing for us lots of experimental ham circuits.

Now, in 1994, as I studied, I remember Charley fondly struggling those 13 times to master his code, and somehow it made it easy for me to get there again. I passed my General, and three months later, I passed my Extra.

As I look back over my time in computers, the Internet, high end electronics, Broadcast TV, I kept asking myself, "why am I interested in ham radio?" After all, there is the cell phone, the internet, email to satisfy anyone's need to talk, including mine. So, why ham radio as a hobby?

The answer for me lies in the mystery of radio waves itself and my control over them, from my own QTH or mobile.

Consider this: Cell phones are commercial, using commercially built components (costing thousands of dollars) I had nothing to do with, except fork up my monthly bill for using the equipment. The Internet uses commercial telephone lines mostly to communicate to others. In fact, I noticed that every form of present day communications, except CB, and Family radio, are commercial enterprises you must buy into and have no control over the path your voice takes to get to the receiver.

But there is something wonderfully mysterious about those radio waves that emanate from my very own antenna in the back yard that can reach everywhere on the earth simultaneously, even bounce off the moon or capture a satellite as it passes overhead.

After I think of it that way, what a thrill it is to put a station together, erect my own antenna, and call CQ CQ. It does not matter whether it is in CW, SSB, AM, FM, RTTY, Amtor, Gtore, Pactor, PSK, SSTV, or TV, or Laser, or mazer - I can do it all from my back yard. And I can contact anyone on this earth and talk to anyone for hours free while connected only by the simplest of antennas between his rig and mine. The mystery of it all never ceases to amaze me, far more than the complex equipment I am used to. Far more than the twisted pair that leaves my house, and goes God knows where to what ever landline, or commercial satellite - faceless zeros and ones packeted between a twenty dollar bill, no doubt.

No! I think this hobby has a never ending future. Think of it. The armature ham operator / experimenter can harness the very forces of nature itself - to bridge a direct cosmos like communication path between anyone. To me, THAT is the thing that should draw new inquisitive talent to our ham radio ranks, just like it did my friend Charley, who flunked the code 12 times before he got it right..

It is the experimentation of it all, of the ham gear, whether bought or build by hand.

And all of it culminates out there when you look out your ham shacks window at that antenna in your back yard (emanating those mysterious electrons) as you carry on a direct rag chew with someone 10,000 miles away. Not through the easy commercial paths, but Thru sunshine, thru clouds, thru heavy storms, thru God knows what cosmic bombardments trying to dislodge your signal. Yet, you somehow make it through.

All from your own back yard.

Where was ham radio? Its been here all along.

Regards,
Tom - AB5ZJ

> Get off the CW kick, already.

What a *JOKE* - coming from PRECISELY the fella who brought CW into this thread, and has STEADILY been beating the CW issue to death in spite of our efforts to shut you up! SHEESH!

Don't try to avoid the main issue -
> which was your "throw in the towel" response to a perfectly
> legitimate e-mail you received regarding how to get more people involved
> in the hobby.

MY "main issue" is that COMPETING technologies are by FAR the greatest reason for reduced numbers of younger hams into our hobby - how did you miss THAT bit of information, perhaps the same way you managed to magically read CW into it? And don't try to tell ME what the "main issue" was - *I* wrote the original post, remember?

>
> Do you, or don't you agree that we should at least TRY to get more
> young people involved in the hobby?
>
> YES, or NO?

Not so sure ANY "crusade" we might conduct - OR more reduced entry exams will do the job - or that anything other than maintaining as high a profile as possible before the public will have much effect - I don't REALLY think lack of general awareness of ham radio to our youth IS the problem - as I have stated, I believe they just have too many OTHER electronic attractions that appeal to them more than the notion of a private amateur radio station. Shucks, they can sit down in front of a computer, enter into a chatroom, and "talk" to others their age (and interests!) anytime they choose - what do they need ham radio for?

For THAT matter, why are YOU AND I *here* now, instead of "on the air"? Because we PREFER here to amateur radio, at least for the unique activity and exchanges NOT available in ham radio - JUST LIKE the kids!

>
> If your answer is no, then there is no use continuing this
conversation.

Since you have so much trouble with simple concepts, THAT assumption
was already pretty obvious!

Not sure of the buttons, but I bought the programming software from Icom for about $40 (Software and cable) and check a box and download and it is done. Plus it makes programming so much easier. Worth checking out.

Good Luck!

FT-10/40R FEATURES

ï¿½ A16D 16 Key DTMF with DCS enc/dec, CTCSS enc/dec, ARTS, 99 Channels.
ï¿½ MIL-STD 810 Rated
ï¿½ Full 5 watt
ï¿½ Battery Charger for all size batteries compatible with FT-10R
ï¿½ Auto Range Transpond System (ARTS), This new system alerts you visually and audibly when a companion handheld is out of simplex range. A built-in CW ID is also included.
ï¿½High Output Audio High technology speaker design produces higher output even with it's compact design.
ï¿½ Alpha-Numeric Display 4 Character Alpha Name can be used to name your memory channels.
ï¿½ Digital Coded Squelch Included to allow quiet monitoring of busy channels.
ï¿½ Direct FM Improves packet performance and voice quality.
ï¿½ Dual Watch, Allows you to monitor an in-band sub channel for activity.
ï¿½ High Speed Scanning.
ï¿½ Top Notch multifunction control knob.
ï¿½ RX / TX Battery Savers, The FT-10/40R includes both transmit and receive battery savers for maximum battery life.
ï¿½ Omni Glow Backlit LCD Display.
ï¿½ 4 Power Output Levels, Low 1, Low 2, Low 3 and High Power levels are selectable to extend battery life.

What I have for sale:
FT-10R A16D 16Key Radio w/ AC Adapter
MH-34B4B: Speaker Microphone
E-DC-5B: DC Adapter w/ Noise Filter

Extras:
(1) ADMS-1B PC Programming Software allows quick and easy programming with your PC including data cable
(1) Foam padded full cover with belt loop

The average price I have seen just the radio forsale is $350. The microphone and DC adapter are around $30 each.
I will sell everything listed for $275.
This is a very lightly used radio. I am selling because I decided to go with a mobile radio instead.

Please email pitre@azstarnet.com with any questions or offers.

I currently own an 8100 and recently sold my V7A. The V7A is a wonderful rig, if you plan on using it in the shack. The "cool blue" display is virtually usless in most sunlight conditions, so I had to yank it out of my van. The V7A does have CTCSS encode/decode standard, where the 8100 requires an optional tone board. I now have the 8100 remote mounted on my dash and the traditional orange display is readable in all conditions. Very good receive and intermod rejection too. Fast scan, and if it matters, the 8100 will receive up through 1300 mhz, which the V7A won't. Out of band mods are relatively simple on both rigs too. Hope this helps.

I am trying to repair the subject transceiver and I need help from a "real" technician. The radio was intermittently "not working" for my mother. She sent it to me and the first time I turned it on the ULI (I later found in the manual that is the UnLock Indicator for the PLL) flashed on the display at turn on. As I was "analying" my reduced photocopied schematic (very hard to read!) and verifying needed bias voltages for tx/rx I noticed the ULI indicator stopped flashing and that the thing would tx/rx!! I left it on for several hours and it continued without any ULI. The next day at turn-on the ULI "business" was back. Obviously, the PLL is "out of wack." The PLL consists of a VCO, TC9122P divider, TC5081P phase det., TC5082P 10.24MHz ref osc. ... While tring to probe for inputs/outputs to those chips the ULI quit flashing, however it's still not locked (the output of the phase det seems to be "railed" at 6V now no matter what the commanded display frequency is set to).

Can anyone give me a short description of the PLL circuit including the output freq of the VCO which appears to be the input freq to the divider. If my "analysis" is correct that VCO apparently is at the 2m ham band which is way higher than my 60MHz Oscope! I can see "noise" on my Oscope on the input to the divider. The current output of the divider is an "L" shaped waveform no where near 10.24MHz (MUCH lower)!

I know this radio "ain't" worth fixing. But it's fun trying. After all, this is a hobby, Right!

Thanks.

Dave

>in a chat room.

Well, if you look at amateur radio only from the prospective of a *user*,
then amateur radio doesn't look all that attractive. Computer chat rooms,
cellphones, GMRS, CB, etc can all offer the same sorts of thing, generally
easier, more reliably, and often cheaper. But if you approach it from the
perspective of an experimenter, that's a different matter. Amateur radio
is virtually unique in that it allows you, nay encourages you, to experiment
with radio and radio techniques. If you approach it from that perspective,
it remains a very exciting endeavor.

If you want to sell it to kids, sell it the same way you would woodworking,
metalworking, or a chemistry set. It gives you a hands on opportunity to
make things, and try things, that you couldn't do if you were limited to the
offerings of the commercial telecommunications services.

Amateur radio is really for the sort of people who want to know how
things work. For those to whom radio is just a black box appliance, it has
little appeal, aside from the gaming aspects of Dxing and contesting.
There are many other alternatives for gamers, but there is no alternative
for those who want to dive into the guts of radio communications.

1810. Review: Radio Shack's HTX-242 2 Meter Radio

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-26 00:00:00 UTC
From: k8cpa@qsl.net
Message-ID: <38de3bf8.47395642@netnews.att.net>
Source record: 82803

Hi Guys and Gals.

I finally figured instead of spending over a grand on a Kenwood TM-742AD, and going to a freinds house and really getting a good look at one of those radios. and thinking, "I'm not putting that nice of a radio in my car!" I decided to go out and get a monoband rig for now...

Alrighty, Now that I go that out.... Here's the review.....

(Drumroll here)

Radio Shack HTX - 242, An Independent Review
By Charles Adkins - K8CPA - Ham Radio/Internet junkie at large (okay now no fat jokes... hihi)

I picked up my 242 on the 24'th..... I went originally went to the Store in Southgate, Mi as I'm very freindly with the manager, Mitch, over there. I walk in..... "hey Mitch, I wanna buy a radio!" I say... and I tell him which one I want. Mitch says, "I don't have any here." But they've got two at the Lincoln Park Store..." and off I go... "Thanks Mitch..." and I make a mad dash to the Lincoln Park Store, By this time the $350.00 in my pocket is really starting to burn a hole in my wallet. Anyhow, I get to Lincoln Park Store, Randy, The Manager is there... "Can I help you?", "Yessir, I'm the one who called on the 2 meter radio and you supposedly have 2 here!" "I was afraid you'd say that, my computer says I have two, and I thought we did have two, but I went back in the storeroom and there ain't none back there. BUT! I've called the dearborn store and they got one, so, If you wanna hang around here for about a 1/2 hour. I'll run and get it... (it was only about a 20 min wait, he must have been flying down the road!)" and I said sure... so, 20 mins goes by, and here he comes, while he was gone, me and Dave one of the sales guys, whom I've known for a LONG time... who also was a manager at the riverview store (before it closed) talked about everything under the sun, He also recommended a good external speaker and a heavy duty noise filter, (to get rid of the alternator WHINE, that Ford's are famous for... I got a '84 Marquis, and can she ever whine!) and so, I got the stuff and brought it home... pulled in the driveway. Proceeded to clean the ol' car out... Mom commented, "I've never seen him clean a car out, so fast in my life!", Anyhow..... I got the car cleaned out, first installed the noise filter, I already had some 4 gauge wielding cable hooked up directly to the battery, that I bought from a freind a few years back, double shielded, Green as a gord! but can deliver the power with no

problems at all.. I installed the filter, went in without a problem. I had to do a little "hillbilly" wire stripping... (you know, a kitchen knife.. and your own front teeth.... hehehe) but all in all, it went together without a problem. Next came the radio. I will forever be amazed as to how in the world, they are able to pack so much stuff in such a little box. it boggles MY mind. hihi... I spent 20 mins taking everything outta that box to get to the power cord! Anyhow... once I got to the power cord, I hooked the red or hot wire to the blue wire on the filter, and got everything taped up. then I brought the radio out of it's plastic... "Boy, these radios sure have gotten tiny" I said to myself, chuckling... as I was unwraping the radio... (got to consider, the radio I was using before was a kenwood TR-7930, that was beat all the heck and back... but it works! and that radio was built in the early 80's... she was about 21 or so years old...)

Anyhow... I got the radio unwraped, and found the mounting bracket... my next question was, Where in the heck do I mount this thing... anyone who was owned a '84 mercury Marquis, knows what I mean... I finally found a spot, which I liked and could tolerate. so, I drilled into the carpet. and got the bracket installed and then I hooked up the radio. Man, things have changed, now radios have pig tails for the power and antenna leads... interesting..... hooked the antenna up (a radio shack 5/8 wave mag mount... for 2 meters. works good.) and the power cord snapped into place. presto! she's all hooked up.

so, the moment of truth has come, I whispered a few words of prayer... and hit the power button..... and I was greeted with a 6-tone beep. and a VFO on 146.000. I chuckled and said, "good afternoon to you too....." hihi... and promptly grabbed the owners manual and began the programming process. Programming the HTX-242 is very easy. the manual is very easy to understand, so, unless you're a complete knuckle-head, you should be able to figure it out... I will warn you. there's alot of button pushin' involved, so, if you ain't into the button pushin', I have a used 7930 for sale.. cheap! hihi

There's a quirk in the radio, that I really, really, really, need to mention to everyone. if you attempt to tune below the lower (and possibly the upper?) limits of the radio abilities... you are greeted with a "PLL ERROR" and constant beeping, that would drive Pope John Paul II into the Wacko Ward! and the only thing that will stop it is a CPU reset! I found out this the HARD WAY! (but, of course!) and my hours worth of programming was trashed... but it gave me a chance to redo my programming a little differently... so, it all worked out...

Okay, now for the performance part, please keep in mind, I am not a rocket scienctist. (don't believe me, go look at my picture on my web site. hehehe) I'm simply giving you my observations on the radio. I don't have any measured data on the radio, I leave that sort of stuff to CQ, QST, and others. I'm just giving you, an Everyday joe-blow's review on the radio.

Transmit is great... I can key MOST of the repeaters in the area. I tend to believe if I was running a comet or a diamond antenna, my performace on transmit would be a little better, but I could very wrong...

Recieve is second to none.... I can hear very well on this radio. alot better than the kenwood I used to run.

Rejection. Now this is where R/S needs to work on.. they've just about got it. but it needs a little bit more tweaking..... I tend to pick up alot of inter-mod when I'm near downtown detroit. I get the usual pager intermod, but where my old kenwood became, at times, unless on some frequencies, my R/S radio was able to still pick up the repeater in question, but with alot of inter-mod in the background... (which I tend to beleive is the norm on most new radios.) also, when I'm in my driveway, I am picking up my freindly neighborhood leaky cable system! I tend to believe that's due to a extra hot reciever and a very leaky cable system... hihi..

Okay, the bottom line.....

for the price, you get a high quality radio, that is up there with Icom, Kenwood, and Yaesu...

Radio Shack offers a 3 year Service Agreement for $59.99, get it, it's a gamble, yes... but worth the investment...

Overall, I'm pleased with the radio, the things got 40 memory channels, I've used like 20 of them, and that was adding ohio repeaters too! and 3 from canada!

so, if you're in the market for one of these, go get it... it's worth the money...

73's and enjoy!

AMEN!

The only opposing comment *I* can offer, is that in earlier tube-type days, the actual building, troubleshooting and repairs of gear was FAR easier than todays. Newer rigs undeniably require a level of training, experience and support tools and devices UNDREAMED of in earlier days. I realize that the "Gary Coffmans" of the world might not agree - but FEW hams operate from the perspective and backround of someone who earns their living in electronics...

I, personally, wouldn't have any reservations about rebuilding the modulator or RF deck in an old AM transmitter of the 50's - but the innards of my IC-746 is a FAR different issue - and while I MIGHT be able to localize a particular problem based upon the symptoms involved, my training, eyesight and coordination might easily transform a simple problem into disaster!

Just as medicine has FAR outgrown the "take 2 aspirin, and call me in the morning", so has modern electronics - to a LARGE extent - transformed into a techno;ogy far outside the interests or ability of many both in and out of our hobby.

True, there remain many simpler projects that both teach and reward their builders with experience and personal satisfaction - but the "good old days" of getting into your gear with both feet,.a pickaxe and blowtourch are pretty much past - and along with those days, went much of the attractions and holding power you refer to.

1812. FS: D.C. power cord for AN/GRR-5

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-26 00:00:00 UTC
From: "David B. Rogers" <dr7zyq@nidlink.com>
Message-ID: <38DE65D1.54835324@nidlink.com>
Source record: 82805

I have a d.c. power cord (includes the 4 pin screw-in connector) for the AN/GRR-5 receiver. It is marked "CX-2031A/U" and "8FT 3IN.". Good condition with large eyelets on the battery end.

$27.50 shipped within USofA. $20.00 plus shipping outside USofA.

Thanks,

David, WA7ZYQ

Well, because I *do* work with electronic equipment professionally
every day, I do have a different perspective, IE I'm not guessing
about how hard it is, I do it. And what I've found is that modern
equipment is generally *easier* to troubleshoot, repair, or modify
than the older equipment.

You have to approach the job a bit differently, and you need a different
set of skills and tools, but it isn't harder, just different. The tools needed
aren't expensive (though you can buy expensive rework stations, I find
that they're a pain in the butt because you have to totally disassemble
the radio to use them), and the skills needed are similar to those practiced
by watchmakers for hundreds of years. There are tricks of the trade
that, once you learn them, make working on this scale child's play.

Put away your pickaxe, and your soldering guns and irons. That
blowtorch (actually a *much* smaller one, I use the Weller Pyropen

Jr with a hot air shroud) is exactly what you need. With the tiny parts, surface tension aligns them, so getting them properly on the pads is no trouble at all. Just put a tiny bit of solder paste on each pad with a toothpick, plop the part roughly in place with tweezers, and hit it with the hot air source (torch) for a second or two. The surface tension of the melted solder pulls it into perfect alignment, and you're done, all pins soldered, no solder bridges, no cold joints.

Don't even think about going into one of these radios with a soldering iron. You will make a mess of it, you're likely to have solder bridges and cold joints, and you'll be frustrated in general by the propensity of the parts to cling to the soldering iron tip. Just don't do it.

To steady your hands, use the old watchmaker's trick of resting your wrists on sandbags. This works amazingly well, you won't believe how steady you can be until you try it. To augment your eyesight (I'm past 50 and need help), use a jeweler's loupe, or for bigger parts a headband magnifier. Once you can see, and your hands are steady, you'll be amazed at how easy it is to work at this scale.

Here's another tip, taken from the tinker's bag of tricks. To avoid unsoldering other parts on a crowded board, form a dam with modeling clay to prevent the heat of the torch from going where you don't want it. This "tinker's dam" works very well, and the clay pulls up easily and cleanly when you're done.

When troubleshooting modern equipment, think at the functional block diagram level. You rarely need to go below this level because whole functional blocks are usually incorporated in a single chip. You're basically just doing signal flow analysis. You can forget all you learned about Ohm's law and the workings of electron tubes or transistors. You're working at a higher level of abstraction than that. You generally don't need to care about the internal details of the parts you're checking and replacing. If they perform correctly functionally, they're good, if they don't, they're bad. Simple. If you have an intermittent, just reflow the entire area of the board. Quick and easy.

VLSI and SMD are a blessing to those of us who have to troubleshoot and repair equipment. They make our job much easier. I'd be happy if I never had to wrestle with a tie strip or tube socket again. (Since I have to deal with equipment ranging over several generations of technology, I do still have to wrestle with the older stuff, and it is always a royal pain to have to do so.)

I can take a 10 year old and teach him the basics of SMD rework in an hour. It isn't hard, just different. You can learn to do it too, if you don't bring your old habits and prejudices to the job.

For sale:
Astron power supply transformers
(1) from an Astron RS-20M
(1) from an Astron RS-35M

I replaced the standard 110v transformers in my two Astron power supplies with switchable 110-220v transformers. The transformers which were replaced are now available. They are in perfect operating order, run quietly (these are not real hummers!)

RS-20 transformer: 110v ac primary, 34v (no load) ac secondary with center-tap. This transformer is capable of a continuous 16A cont. 20A intermittent current draw. There is a also another secondary winding, 44v ac but I don't know how much amperage draw is capable from it. $18

RS-35 transformer: 110v ac primary, 34v (no load) ac secondary with center-tap. This transformer is capable of a continuous 25A cont. 35A intermittent current draw. There is a also another secondary winding, 44v ac but I don't know how much amperage draw is capable from it. $25

Either (or both) would make a perfect replacement for your existing supply, a great addition for the hobbyist or 'built it yourselfer'!

Buyer would pay shipping from S. FL 33478
Vic, KE4QJK

From: George Spear AA1PD <aa1pd@yahoo.com>
Message-ID: <8bm7sa$b21$1@nnrp1.deja.com>
Source record: 82813

I plan to get going with QRP Mobile CW using about 4 watts into a Ham stick. I am usually in the car between 9-5 and want to have some qrp fun as I drive around visiting hospitals (I am a sales engineer for a software company) I have been assuming that I want to use my 20M rig but I read a post recently in rec.radio.homebrew where a backpacker was advised that contacts would be easier during the day on 40 rather than 20. It was not clear why the guy posting felt this was so but it has me wondering if 20 or 40 would be the better daytime band. Any recommendations would be appreciated.

Thanks! :-)

I am looking for a cabinet for my Collins 30L-1 Amplifier. I understand that the KWM-2 cabinet will also fit with some minor modification. I am not looking for a museum quality unit, but will gladly pay what it is worth, depending on condition.

Please respond to: <pai@san.rr.com>

Message-ID: <KOdD4.2055$Ry.8946922@firenze.visi.net>
Source record: 82881

I was just given a complete 75 watt Motorola Micor repeater (1975 vintage) that operates on 463.00/468.00 MHz. I am experienced with GE, Maggorie, Hamtronics but not Motorola. I have ordered crystals for 443.55/448.55. The model/serial # plate was removed by the donating company (a local Motorola dealer).
The help I seek is the location of basic connection points for the controller (COR, audio in/out, etc.). The controller is a Micro Computer Concepts RC-1000V. I still need to retune the TX/RX as well. What are the correct coils to tune? Will I need to change caps or other parts to move it 20 MHz?
Please reply by email: syarc@juno.com
Thanks!

Anto:

There was a control article in QST magazine back in 1981-1983 for controlling the IC-255, an FM only version. I remember information in that article discussing frequency read/write of the 4 bit Texas Instruments TMS1000 controller. Hope that helps. Unfortunately, I do not have that QST around.

Best official source for Motorola help is via their toll free Parts Dept.and Parts ID line, 800-422-4210, where you can get the proper service manual for your particular station. I also have a 1975 vintage Micor Repeater (Hi Band, converted to 2M) that our club has used for over 20 years with almost zero problems, and no hard equipment failures.

I totally agree with you. I've noticed the same thing with my kids,
and their friends.

The problem is, if we miss another generation of potential hams, it
could spell the end of the ARS. I've proposed a new license class,
available only to persons under 16 years of age, intended specifically
to get kids into the hobby:

1859. RF vs Burglar Alarm

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-27 00:00:00 UTC
From: Njuhnir <greg@mcgillcorp.com>
Message-ID: <38DF827F.BE9781BA@mcgillcorp.com>
Source record: 82707

Has anyone had experience rf proofing a burglar alarm? I have been off the air for a while (we've had a
alarm installed since) and when I went to transmit in Amtor, the alarm system was triggered. I assume
the usual prodiguous amounts of cores etc could help but am looking for someone who has done this.

Any help is appreciated, please email response to: greg@mcgillcorp.com

Thanks, Greg Z.

1860. Re: FT100 Software and connectors

Saw several vendors selling just the power connector for the ft-100 @ Toledo
Oh HF. Check out the 'surplus' vendors at your next large HF Price was abt
$8 for the power connector alone

First the accessories:

8.5' separation cable
Mobile faceplate mounting bracket
Extra DC power cord
All for $75 shipped

Now the rig:

Icom 706 MK 1 (original)
100w 160-6m
Optional HM-77 DTMF mic
$620 shipped

Buy one or all. Buy all and I'll ship it all for $675

Gary k7mhz

> understand?

Don't make me laugh. You act like it is a branch of the Armed
Services. Of course it is a hobby AND a service. But you
are "misconscrewing" the term "SERVICE". In FCC-land, there is the FRS
(Family Radio Service), the GMRS(General Mobile Radio Service), and the
broadcast services. All this means is that the government has
to "service" us. We don't "serve" nobody.

I found this on eBay. There are several pictures of this brand new never-been-used beauty. So far no bids. Opening price set at $225. I already have a Silver Eagle ,10-DA and Diamond Eagle D-104. Someone is sure to snap this one up. The photos are really gorgeous. Check it out. It is not my item and the seller does not know I have posted this. It is just a FYI post. I have nothing to sell myself.

Source record: 82721

Absolutely not. The NiMh batteries can be ruined by
the .1C overcharge that NiCad can take indefinitely.

If you stop charging when the battery is "full" the
the charging can be similar although the max. rate is
lower for NiMh.

From: gulyas@netzero.net
Message-ID: <8bmdtvhbi1@nnrp1.deja.com>
Source record: 82824
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner

Do you have a need for an sma-to-bnc antenna adapter that is custom
made to fit and protect your H.T. or scanner radio?
Adapter allows you to:
Quickly change your antennas to base,mobile or different style use.
Use the more popular and wider selection available of bnc antennas.
Prevent chassis connector wear or from coming loose due to always
having to change antennas.
Adapter features:
Gold contact pins for best conductivity.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base provides a positive antenna support for all applications.
No need to remove once installed to make any antenna changes.
$11.95 + $1.50 S+H (Sizes to fit most radio models)
For complete information and to view a photo of the adapter go to:
WWW.QRZ.COM (SWAP)(ENTER KEYWORD SMA TO SEARCH CLASSIFIEDS)
OR EMAIL: gulyas@netzero.net
I welcome any questions or comments at my email.
Thanks for looking at my posting.

Cross-posted to: alt.ham-radio.marketplace,rec.radio.swap,alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

Yaesu FT 290R MK II, very good condition 8+ maybe even a 9!
This is a 2M all mode (FM, USB, LSB and CW), with 2.5W or 25W out.
Digital display, 8 memories +1 call memory, 2 VFO's, 12V or battery
operation.

Here's what you get:
FT290RMKII Radio
YHA-14A Rubber Duck
FBA-8 Battery Case
FL-2025 25W amplifier
FTS-7A tone encoder (installed)
MH-15C8 Scanning DTMF hand mic
CSC-19 Soft Case
Shoulder Strap
MMB-31 Mobile Mounting Bracket
and original box!

The radio has been mobile once while on vacation, but has spent most
of it's life as a base. I've used it in all modes, and it works great.

Asking $425.00 and you pay shipping.

The YD-148 mic has been sold.

Hi , l want to list this before l but it on ebay so here it goes , decent shape Yaeau desk mike normally used on the FT101 series of radios. lt has a 4 pin plug for a 101 , has a few marks on it . l would rate it as a 7.5 to 8 out of 10 . asking $40.00 (more than l paid over a year ago) . Willing to trade for a Kenwood MC-50 or 60 plus l will pay extra . Email me at clfastback@aol.com , thanks !

I have for sale a Icom W2A dual bander (2m/70cm). Unit is in 100% working order. Case is kinda ugly but not broken. Unit includes 8 month old battery, speaker microphone(ICOM brand), cig. adapter, antenna (not orginal however), wall wart charger. Unit has 40 memories on each side and will cross band repeat between the two sides. I'm asking $225.00 (includes shipping). I will acept Postal M/O's, Bank M/O's and personal checks. P/C's will have to clear before shipping. I will ship via USPS or UPS and will provide tracking number once unit is on the way.
Please no trades.

1885. FS: Kenwood 261a

Source record: 82833

I have a brand new TM-261a for sale. The proof of purchase is dated late 1/2000. Price is $165.00(incl/shipping) and is firm. All I'm asking is exactly what I paid for it, nothing more or less.
Unit is in total working order and includes the box/bracket/users guide....ect ect.
Money Order/Postal Money Order or Personal Checks ok. Personal check will clear before shipping. Will ship via USPS or UPS and will provide tracking number once unit is on its way.

I can be reached via email at kb2ehj@intrex.net

IC 2SRA 2m HT w/scanner. Unit rec/xmit on 2meter band and on the
'other side' receives from 25Mhz to 950Mhz cont. (includes cell band).
Case is in very good condition. I will include the following items
with unit: Wall charger, cig. adapter charger, good battery (1.5w
out), Master2 charger with good 12v (5w out) battery, both antenna's,
users guide. Asking $275.00(includes shipping). I will acept Postal
M/O's, Bank M/O's and personal checks. P/C will have to clear before
unit is shipped. Tracking number will be provided when unit ships.
Will ship USPS or UPS.
Please no trades.

1887. Re: Ten Tec 580 Delta

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-27 00:00:00 UTC
From: Jim Keith <jimkeithNOjiSPAM@juno.com.invalid>
Message-ID: <23fd17c8.79aef6ef@usw-ex0106-048.remarq.com>
Source record: 82835

I have had a 580 Delta for about 2 years and I am not sure you would want one. You mentioned going mobile with it, and I must tell you mine drifts almost continuously. It doesn't drift more than 200 hertz, but in mobile use it would be a problem. Also I don't know if you want a general coverage receiver or not, but this rig is ham band only. If you want an older rig that is compact and fiarly durable I would suggest you try to find an Atlas 210. It is about 1/2 the size and should be available for $200-250.
Hope this helps with your question.

Jim Keith

1910. Re: Serial numbers

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-28 00:00:00 UTC
From: Alan Ralph <G8xlh@tesco.net>
Message-ID: <8bp452ihc1@epos.tesco.net>
Source record: 82734

With Yaesu the format is:-

5HXX XXXXX

where the 5 is the year eg 1995 and H is the month (Jan=A Feb=B etc) the XX
is then a batch/production line number followed by XXXXX serial number.

Hope that helps

Alan G8XLH

Not just yet. I got a separate email from someone who said they can mail me a copy of the original owner's manual, shematics (11 x 17), and service manual. I haven't responded to it yet, because there may be someone in the radio club at work who also has better documentation than mine.

I haven't tried reflowing the solder on the VCO yet either. If you want to try it first, let me know it works out! I suspect that's a good place to "shotgun" it seein' how all the components are "potted." It could be the potting has stressed the board/components over time?

I have limited access to an HP8566A spectrum analyzer and other test equipment at work (I test the rear receiver for the Sparrow missile at Raytheon). I'm the kind of "tester" who wants to "prove" what's wrong before I start trying multiple "fixes." I "hate" intermittent failures! Right now, I think reflowing the solder on the VCO pads sounds like a real good idea, but I want to make sure it's really the VCO that's not working. Besides, the whole dang tx board has to come out to do that!

I just took out of a two year storage three Yaesu 800 rotors....thats
3 control box's and three rotors.

I checking them out two of the control box's will run/rotate the
rotors but the compass indicator will not rotate!!!

I've tried many different combinations of the six pieces but it come
down to the two control box's....all functions work but the indicator
compass's...they all worked when they were packed away two years ago!!

Problem in the control box's ...anyone have an idea or run into this
before???

So far on older kenwoods, and maybe newer too, it seems the first number is the year. Of course , you have to use a little common sense. For instance I have an 830 that is 2050039. This is an 82. Common sense will tell you it's not a 92 as they didn't make the 830 at that later date. Most most all the older kenwoods I see adhear to this format. IE : a TS 930 with a 40540000 would be a 84. No 930's made in 94. A TS 520 with 8050000 would be a 78. etc, etc. MK

1928. Knwd TS-570 & TS-850 T/R Switching ??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-28 00:00:00 UTC
From: gdn1@rocketmail.com
Message-ID: <38e06951.24908839@news.usol.com>
Source record: 82752

I'm curious if the TS-570 uses the same T/R switching scheme as did the TS-850 ? I've been eyeing the TS-570 but am curious if it has the same fast / silent switcing as the 850? I suspected my previous '850 used pin diodes or a pin diode / reed relay combo ?? but never bothered to check. It certainly seemed faster and quieter than the normal frame relay setup.

TIA

Gary K8IQ

1929. batteries for FT-11R series

From: C-A Berseth <Claude-Albert.Berseth@epfl.ch>
Message-ID: <38E07E8D.2CE3B0A7@epfl.ch>
Source record: 82753

Hi all,

Does anyone know the wiring inside the batteries FNB-31 and FNB-38 ?
It looks like they have overvoltage protection (Zener diode ?).

Also, are there any battery packs with higher capacity ? After all, MiMH
cells
have a much higher power density than NiCd's, so batteries of the size
of the FNB-31
and FNB-38 might well have 1200 mAh instead of 600 mAh...

Thanks for your advices !
Claude-Albert

1940. FS Kenwood TS-870 w/options - reduced

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-28 00:00:00 UTC
From: Kevin <kpevin@mediaone.net>
Message-ID: <%d5E4.300$2U.1989@elnws01>
Source record: 82764

This is the last time I am going to offer this so if you were ever interested in a TS-870, nows the time...

Very clean TS-870, ser# 807xxxxx (it is after the serial number cutoff so it has all the factory updates). I am not the original owner. Radio looks great, just a couple minor marks from use on the cabinet - no deep scratches, front panel perfect. Heres how it goes:

Radio, hand mic, and manual: 1350.00 (AES used price: 1679.00/new 2299.00)
DRU-3A digital voice recorder: 70.00 (AES: 129.00)
SO-2 High stability oscillator: 120.00 (AES: 179.00)
MC-60A desk mic: 85.00 (AES: 149.00)

The whole package is 1600.00 + shipping, accessories not sold seperate unless radio is sold. I dont have the original box so I would recommend pro packing/shipping (40-50.00) This is a great deal on a great radio, I'm getting a 756PRO and I just have too many radios around here. I use it every night and never had a problem with it at all. Price is firm, partial trade possible on a 2 X 3-500Z amp (no SB220s). E-mail for pics.

73,
Kevin

Has anyone experienced difficulty in programming both the FL 100 and FL 223 filters, that is Initial Set Up 19 and 20.
It seems as though FL 100 should be inserted in socket 1, and FL 223 as marked on the PC board. Option filter 2 is towards the front of the IC 706 and option filter 1 is behind it.
I found that if these filters were not placed as mentioned, they did not work.
It would be interesting to know if anyone else has had the same results? Jim W1OBJ

Got it from the ITU some years ago. Can't guarantee that
it is fully up-to-date.

You can get a chart from the RadioCommunications Agency.

I'm sure there must be something on-line somewhere if you
want to search for it.

> What would you think of about .05C tapering off to .01C as the batteries
> approach 1.4V per cell?

According to the Technical Handbook for Panasonic
Nickel Metal Hydride Batteries dated 96/97.

1. It is recommended that batteries be charged at over 0.5C and less
than 1C. Rapid charge must be stopped if
any of the following occur.
Cell voltage reaches 1.8V.
Cell voltage DROPS from its peak by 5 to 10 mV.
Cell dT/dt value increases at a rate of 1~2 degrees C. per minute.

2. If the temperature is less than 0C. or greater than
40C. at the beginning of charge then trickle charge and
not rapid charge must be performed.

3. Trickle charge is defined as 1/20 to 1/30 C
(C is 100% of battery amp hour capacity,
C. is degrees Celsius). "When the trickle current
is set higher, the temperature rise of the batteries is increased,
causing the battery characteristics to deteriorate."

4. A total timer 10 to 20 hours is recommended.
" the over charging of nickel metal hydride batteries,
EVEN BY TRICKLE CHARGING, causes a deterioration in overcharging by
trickle charging or any other charging method,"

For any further questions, you need to study the technical handbook for
the manufacturer and battery of
your choice. The life will be short if they are treated
like Ni-Cads. Or do as I did and get a MAHA charger.
Yes, I can design and build a suitable charger but my
case it was not worth it. I am sure some flame throwers
will assert that they tossed their NiMh cells into their
NiCad charger and they worked fine. I tried to summarize
the facts as given by Panasonic. If there is newer and
better information available please let me know.

The ad looks like pure snake oil.
But the product might possibly work.
There is not enough information given to figure out
if it is anything but hype. The so called specifications
are devoid of technical content.

The concept that batteries can be rejuvenated buy
proper pulsing technology is sound. The concept
of sulfating has merit I believe.

But no obvious verifiable evidence of success is
presented in this ad. Buyer Beware. But it might be interesting. What
is the price?

1955. FT-900AT Yaesu rig has developed a strange problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-28 00:00:00 UTC
From: Ethos <jag@oklaghoma.net>
Message-ID: <se2dmdhkead155@corp.supernews.com>
Source record: 82779

Please help,

My FT-900AT rig has developed a strange problem after years of excellent operation:

Symptoms,

Powers on OK, then all characters on the display begin to flash at a 1-2 second rate, after about 6 seconds
Tuner will only attempt a transmit tune if RF is fully CCW. If the tune button is pressed prior to the display flashing
PTT has no affect
VFO tunes fine and receive signals can be seen on the S-Meter.
Squelch will operate (makes the "receive green busy" lamp go on and off)
AF and squelch have no effect on very very low audio in internal speaker. I have to place my hear directly on the speaker to hear the low static.
Receive Audio is very very low in the internal speaker but has no distinguishable "voices" just very low static.
key beep works and the volume pot for the beep is adjustable as normal

Trouble shooting I have tried,

Removed antenna connection
Installed 200W 50ohm dummy load
Checked power supply, OK
Followed startup procedure in Operators Manual. (and everything else found in there)
checked speaker switch, on=very very low static, AF and squelch have no effect, off=silence
set memory switch and reset memories yep, wiped it out and did not help. set back to ON.
Went through all key combinations including the power up ones, found some great features, all seemed to work fine but above problem remained un-affected.
removed head and checked contacts, no trouble found there.
Tried again with microphone removed, no change
Checked panel switch settings found none that seemed broken or unusual in their operation.
began to feel sickly...

Any assistance is welcome

thank you,

Mike

You might also look into what is called a burp charger.
There are a few on the market that were designed to be used
originally with nicad batteries. It also woks well with the
lead acid. The burp is trying to break down the gas bubbles
on the plates.

Miles,

Usually, yes. I have re-tuned many and never had to make any mods. Transmit will go further than receive so you should be OK. Receive can be limited by core travel in the helical resonators, but again you are usually OK into the ham band.

- Seth

Your smoking dope, right?

There are many good radios out there, but few can compare to The President G
eorge.

>>>I have a President James, and while I agree that they are a good radio, t
he George doesn't work ALL that well with a linear, and I have heard better
AM transmit. However, for SSB, it is a damn fine radio.

This gem of a radio boasts many features not found on other, lesser radios s
uch as:

>>>All around, about the same as any Galaxy!

* Internal, user- definable security code. Should someone be foolish enough
to steal the unit, it will be inoperable unless the code is re- entered.

>>>Which can be broken with the hack available on the internet.... Useless
gimmick.

* Sixteen channel memory. Stores your favorite frequency AND mode of operat
ion. Jump to your favorite channel with the push of a button!

>>>Not quite that easy, but functional.

* Three ways to change channels. From the rotary knob, using the push butto
ns on the radio, or from the microphone!

>>>Yes, you can reach down and change the channels with the buttons on the r
adio, or the knob.. Never figured out why President included both.. Maybe
to fill space on an already cluttered faceplate?

>>>And you lose that FANTASTIC functionality when you replace the mic with a
D-104.. The stock mics they supply suck quite a bit of ass.

* Full frequency coverage from 26.105 through 28.805, including all 'A' chan
nels.

>>>My Galaxy does better.

* AM, FM, and SSB modes

>>>Which is standard on nearly any export.

* Full complement of front panel controls including variable RF power and op
en clarifier.

>>>Yes, you too can have the variable carrier, so everytime you go get back
in the car, you have to reset up your entire station, wondering if that stup

id carrier control was moved by junior when he was fidgeting... 'Cause you know the George can deadkey 30 watts, and that would DESTROY almost any amp out their.

* Full internal metering RX/TX, SWR, Modulation

>>>Modulation meters are useless... What other radio doesn't have a RX/TX m eter. SWR meters are useless on a radio.

* Dual- color background lighting for the Liquid crystal Display. No LED's to burn out!

>>>Tell that to all the fine people who purchased Emporers and live up in th e north, that now have totally junk radios because the LCD froze. I like th e LCDs myself, and think that my RCI2900 was about the best, but the damn di splays aren't what they are cracked up to be... Yet another reason the Big Three Jap companies use the displays they do.

* Extremely quiet and sensitive receiver. I've had a LOT of radios through the years, and I have NEVER had a receiver like this one, unless it was an I COM or a YEASU, which can cost thousands of dollars.

>>>Yes, the George has a KILLER rx section... Along with all the other Unid en Exports on the market now under the President name.

* And many, many more features.

By itself, this radio is a force to be reckoned with. But there is more to this offer...

The selling price includes a TX-800 mobile amplifier. These two units were recently serviced and matched to each other (receipt available upon request) .

>>>Who gives a shit? If the tech that did it didn't know what he was doing (and by your comment coming up, I HIGHLY doubt either of you do), then all h e did was turn the coupler and carrier adjust for max wiggle on the meter.

This amplifier will easily produce 1,000 watts DEAD KEY, when used in the 'High" setting.

>>>No it won't. That is out and out bullshit. I know the person who builds the TX series of amplifiers, and they where never designed to go that high, and never did. Hell, I tried to get a thousand watt carrier out of one into a Bird dummy load with two Astron 70A power supplies and a marine battery ba cking them up. Never happen, buddy. You don't have enough drive power out of the single MRF 455 / 2SC2290 (depending on the age of your amp) that they have. Couple that with the Class AB design of the amp (which makes your "Mo dulator" statement coming up look stupid) and you would be bringing in near 2200 watts of DC input.. Divide that amongst 5 transistors and you get near 42 amps into the collector of each 2879.

>>>Right.

Typically, I have not run it that hard.

>>>I would pray not!

Instead, I keep it in the 'low' setting, which provides a 40 watt dead key w
ith a swing of between 300 and 400 watts using a 2.5 watt input.

>>>Mighty non-linear for one of BPs amps. Guess that must be the shitty mod
s to the radio doing that.

On the low side, the amp acts like a modulator.

>>>Not stock, it doesn't. Stock 1 watt in gives about 70 out, 5 watts in gi
ves about 350 watts out. Nice and linear. Just like a Messenger box.... F
rom where the major design of it came from.

This is the preferred mode of operation for this unit, as it puts no unneces
sary strain on either the radio, amp, or your vehicles electrical system.

>>>If you have to worry about your electric system., you have no business ru
nning an amp.

The TX-800 is an amazing amp, not much bigger than a run of the mill 350 or
so.

>>>Read that as it gets HOT quick when running it like it should be able to
run on AM. SSB it works fine with a stock radio driving it, but on AM, they
suck a bit of ass.

But it will outperform amps more than twice it's size. Dual fans keep thing
s cool,

>>>Read that comment as the amp is noisy.

and a front- panel indicator warns should operating temperatures get too hig
h. Of course, this amp has all the usual features, both AM/FM and SSB mode,
as well as a preamp for pulling in the weak signals, but you will never use
it because the receiver on the George is THAT DAMN GOOD!

>>>I will cut off the rest of his spew.

The deal isn't bad, but this asshole belongs selling used cars.

Nope. Both the SM-220 and SM-230 have been discontinued, though they are frequently found on the used market. SM-220s with the appropriate panadapter kit go for around $300, while clean SM-230s still sell for around $800.

Hi Groups:

I own a Ramsey QRP 30 meter CW rig and it's complement QRP AMP linear. I like the setup and
have made some nice CW contacts. With the rig alone I can get .4 W out. I decreased the value of the collector resistor in the driver circuit hoping to get a little more out of the transmitter. It worked and I got .5 Watts. But the 3053 final can't seem to keep up with the change.
Would anyone suggest multiple 2N3053's or another device capable of handling the power without producing so much heat?
I would like to find a replacement for the 2N3053 that would not heat up so much that the power drops. Is there a replacement that would handle more dissipation without so much heat? I did some looking and found a device with similar characteristics as the 3053 but with a higher power ratings. The 2N3553 looks somewhat similar. Anyone out there know of a replacement part with similar voltage/current/gain and hybrid parameters?
I forgot to mention the power output of the transmitter when attached to the QRP amp goes to 2 watts out the antenna! If I drive the QRP AMP to higher than this my AMP oscillates and goes into runaway. Talk about HOT transistors. But that is another subject..

Thanks and 73

News of a new Kenwood radio from the Waters and Stanton pages at :
http://www.waters-and-stanton.co.uk/latest.htm

Kenwood DC to Light

As we predicted, Kenwood are about to unwrap their new transceiver. Take an IC-746 and mix it with an FT-847, take a few features of the TMD-700E and you have the new kenwood TS-599! At present the Japanese cannot decide whether to show it at the Dayton Ham Radio Show or wait until they are able to ship later in the year. Prices are also still under consideration and the final price will be dictated by the competition. We expect the value added features will cause the price to be pitched above the FT-847, and well above the IC-746. It is likely that Europe will be the first to get the new model, but CE approval may delay shipments. Kenwood UK will still not be drawn on further information.

Cecil,
I would love to mount a vertical or dipole spanning the roof, the only problem is that the house isn't "mine", it is my father's, and he is not keen on the idea of antennas, especially unsightly ones atop his house. :(and as i said in the message before, the closest trees are about 400 feet, and the only other support structure closer is the power pole, and it would probably not be a smart idea, not to mention against utility co. policy to fasten an antenna or support line to it. Hence the reason that i was considering an isotron- it is small, not that unsightly, and could be mounted atop the roof without that much trouble.

Yes. Keep the IC-735. For the money, you have a very fine rig. I will
likely not part with mine! It is a wonderful and simple field day rig that
all can operate with little or no instruction. It is practically bullet
proof. You can even work on it yourself to a certain extent. It is worth
about 500 to 600 bucks and for another $1000 you would only gain more
buttons, whistles and bells and not much more than the 735 already has. Now
if you are talking about a 756Pro----ahhhhh--what dreams are made
of!!!!!!!!!

Is it the alarm or the fire system being triggered? I put in a switch near the shack to defeat the smoke alarms with I am in the shack. I heard of another ham who rigged a relay to trip out the alarm whenever he transmits, but I think it is extreem. When I went to a real nice Polyphase type bulkhead, moved my primary tower about 120 feet away from the house and up 100 feet and really worked at gounding, almost all of my false rf alarms stopped.

From: "David A. Heupel" <"dheupel |"@|>
Message-ID: <8bu7pj$b3b$1@server.cntfl.com>
Source record: 82554

Hi. I've got an Icom 706MKIIG that is just over11 months old. Today, it quit transmitting on 2 meters. Its not an antenna problem, and the radio seems to be working fine on all other bands. I made a European contact today on 10 meters. Power output meter doesn't budge at all on 2m - all other bands show full output. It receives very well on all bands, including 2 also. Final transistor(s) go bad on 2 meters, maybe? Anyone else experience this problem? Interested in your comments...

Thanks & 73,

Well, the problem is easy to solve - recruit you father into ham radio. :-)

I got my first ham license when I was 14 in 1951. My parents didn't mind
me putting up a 40m downspout vertical in the back yard. A vertical might
be your best bet. The radials can be buried and thus are invisible. How
does your father like flagpoles?

Well needless to say, the old man is not into the idea of flagpoles, OR becoming a ham either. I am coming to the conclusion that my best bet would probably be to set up a mobile station in my truck, perhaps using a screwdriver type antenna, as i usually have long commutes that i could spend hamming. It seems that would work best, unless there is some other reason why HF mobile would not work well. Anyway thanks for all of the replies.

1982. Re: RF vs Burglar Alarm

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-29 00:00:00 UTC
From: "W. D. Mays" <wdmays@earthlink.net>
Message-ID: <38E2D0FB.91B68D50@earthlink.net>
Source record: 82557

Hi Greg,

Until two years ago, I owned a company that installed security systems and I had over 100 hams among my customers. RFI can be a problem. Here are some of the things I did to get rid of it.

1. Use shielded wiring for all sensors, particularly the keypad wiring. Wiring to
passive sensors like door contacts is not as important.
2. Use only "Detection Systems" or C&K brand motion detectors. Forget about
trying to RF proof most other brands.
3. Ground the control panel well (many installations are not grounded at all) but
watch out for ground loops.
4. Cores and .001's on both ends of the keypad leads and on sensor wiring if they
present a problem.
5. Remember the telephone line and the siren leads. The telephone line can really
cause trouble but probably is not a problem if you can't hear your signal on the
telephone.
6. There are some brands of control panels that seem to be less sensitive to RFI;
Radionics, Detection Systems, some Ademco models. Some such as FBI, Caddx
forget about RF proofing.
7. Electronic Glass Breakage detectors are great prevention devices but are hard to
protect from RFI.

I can assure you that you will be able to solve your RFI problem, but you might have to spend some bux to do it if your system does not have the correct (essentially Mil-spec) components to begin with. Most alarm guys have no idea what RFI is, so use your own, probably more complete knowledge, in fixing the problem.

I drive a small external relay from the band data output. This should be a low current 12 DC relay with a supression diode across the coil. Relay coil current should be less than about 80 mA. These are very quiet when suspended on the wires that go to the electrical contacts that control the external amplifier switching. Russ, WA2GWV.

1985. Re: replace IC-735?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-29 00:00:00 UTC
From: ignacy@num.ads.uga.edu
Message-ID: <38e27609$2$vtanpl$mr2ice@news.uga.edu>
Source record: 82560

2 yrs ago I decide to replace my aging 735 with 500 Hz filter. Pots were getting noisy, AF on receive was distorted, notch marginal, and there was always white noise on CW with narrow filter. In the end I went for TS-850AT. It could hear sigs on 160-30m much better due to less noisy synthetizer. On transmit, the signal from 850 was deemed to be 1-2 S louder than from IC-735 and much better quality. That was due to RF and not AF speech processing, and DX-sounding "high boost" button in TS-850. Also, the TF button made spotting split-stations much easier. The receive audio is more linear. Used TS-850 are going for about $900 with 500 Hz filter. I added a 250 Hz 455 KHz filter and replaced the ceramic SSB filter at 455 KHz with a crystal filter. I don't believe that many new rigs have a SSB signal even close to TS-850.

The noise blanker in TS-850 works but is not exceptional. I use noise canceller which works even when NB cannot. I also use an external DSP.

In the summary, IC-735 was good but aged, and there are good used choices if increased size is not a problem.

Put a 5 blade fan in place of the 3 blade stock fan. And during heavy duty operations, use the CW voltage position, it will still give you nearly a KW output, but the transformer can handle the lower voltage, and higher current levels better.

The theory seams sound, but if you are using a battery that already has deposits in it, nothing can remove it.
Pulse charging is not a new idea, it is the preferred way to charge a "Gel-cell" type batteries.
I use a pulse type charger on deep-cycle marine battery, it's the best way to reach max capacity, but the trade-off, is that it's not a quick method. It takes nearly all day to charge it up. It is less stressful on the battery, and "in theory", will not promote lead-oxide deposits on the plates.
The way it works; High current, short duration pulses of DC, timed by a microprocessor, that monitor battery voltage between pulses. The duration and amplitude of the charge current are varied, with the changing battery "resting" voltage. As the battery reaches full charge, the MP, makes the pulses shorter, and the time between them longer.
In the beginning of the charge cycle, the MP, has the charge current on nearly continuos, at full amplitude. Then, after a predetermined time, the MP, begins pulse charging.

As the byline suggests, I'm having trouble with this model, and since I bought it used, don't (yet) have a manual. I got it fixed up a couple of years ago, but had little time to use it, then let the power down. Now that 'm interested in it again, I'm having trouble, namely...

Is there some sort of a transmit lock-off? I was able to tx back when I actually used it, but now, when I go to ptt, I get a beep and nothing else (no tx light, the static remains, &c.). I am trying this in the permissible range, not 70 cm or anything, so what gives? Am I a goober, or is there something wrong? Thanks for your consideration...

2000. GE MASTR II UHF Frequency Question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-29 00:00:00 UTC
From: Miles Gillie <mgillie@nc.rr.com>
Message-ID: <6ss2es0ekj0vm31s89i3qmr59kqqrn59dv@4ax.com>
Source record: 82658

I am converting a GE MASTR II UHF to amateur frequencies and need input on how far the radio can be tuned. This is the 450-470 Mhz version. I have converted these to 443 Mhz transmit, but I now need to go to 442.100 Mhz transmit and 447.100 Mhz receive. Will the radio tune down that far?

Thanks,
Miles

2001. FREE TOWER

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-29 00:00:00 UTC

Message-ID: <38e17744.9127845@netnews.worldnet.att.net>
Source record: 82659

FREE TOWER?!?

This is a TriEx H471, 71', four-section crank up guyed tower.

One of its guy anchors failed in a wind storm and it fell into
the trees. The trees stopped the fall and prevented destruction of
the tower (the antennas didn't fare so well). The tower was slowly
pulled out of the trees by a bulldozer and is intact, nested, and on
the ground, ready for pickup.

The base plate is bent and needs to be repaired or replaced.
The base legs are bent (maybe 3-4 degrees) approx. 3-4' up from
the base of the tower.

The tower is salvageable, but I don't have the time or welding
skills to devote to it. A competent welder could sleeve the legs
and fully repair the tower. The winch, top 3 sections, cables, etc.
are in good shape.

Pick up only in Kansas City area.

Hi, Jim

One consideration on all these radios is that they are "OBAAT's" - that's "One Band At A Time". Radios like the Icom W32 allow you to listen to two frequencies at once - even two VHF or two UHF frequencies. Kenwood and Yaesu have radios that do this, too, but I'm not familiar with them.

I find that function quite useful. And I'm not usually listening to two converations at once - that would be confusing coming from the same little HT speaker. Rather, I'm able to listen to traffic or scan the band for activity on one side while monitoring one specific (quiet) local repeater or simplex channel on the other side.

This isn't a "make or break" feature, just something to think about. So many choices...

And I do recommend the Icom W32. I picked up my second (for my wife) in January for $277 from Communications Headquarters (Wilmington, NC) at the Richmond VA hamfest. Quite a bargain these days.

Don't forget that to make an HT really useful, you probably need a second battery, maybe a drop-in charger, and perhaps a speaker-mike. The after-market stuff is good, and lots cheaper than the brand-name manufacturer for this, but you're still adding 1/4 to 1/2 extra to the price of the radio. And I recommend a "leather" case to keep the radio from getting scuffed and scratched. Some of these are priced like they're made of spun gold.

Regarding 50 MHz and maybe 1.2 GHz capability: you'll probably find these bands quiet to empty. Check out your local area for repeaters and activity. Six meters can provide some fun if you've got a local machine, and an occassional thrill when the band is open and you can talk to someone 900 miles away with the HT... but that won't happen often. And there are only a few 1.2 GHz repeaters in the country. If you've got one in your area, you're lucky. But it's still going to be quiet most of the time. These bands are best for hams who are looking to get off the beaten path, experiment and try something new. But they're not your daily bread & butter ham operation.

My Adams has a problem from the day I brought it.

On AM the transmission is fine (4watts) and adjusting the mic gain has the expected results.
However, on SSB (4watts instead of about 12PEP) when I adjust the mic gain it starts a nothing, peeks at about 1 3rd of the way round the dial then rapidly dwindles to nothing at about half way and stays there for the rest of the dial.
I have had the cover off and adjusted, then replaced ct7 (ALC). No change.

I am suspecting the mic gain control itself, but because it works on AM I'm not so sure.

I brought the set second hand and it had a digicscan professionally wired in.

I live out in the sticks and it will be difficult to get a "real" tech to look at it, does anyone have any more ideas on what I can look at?

Cheers and thanx in advance

I am searching for a place to mount a dipole for HF, i have ruled out a tree because the closest tree is ~400 ft so i would need loads of feedline for that. I hear a lot of people talk about mounting dipoles in their attic. I would do that but my only concern before i do is that my house has a metal roof; would this defeat the purpose of mounting the antenna in the attic, or would it make any difference at all?
you can reply to my email address at hoover@uk2.net

Thanks for reading this 73,

Erik, KK7OA

2026. replace IC-735?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-29 00:00:00 UTC
From: Howard Lester <hlester@as.arizona.edu>
Message-ID: <38E25CED.EAE7E8EF@as.arizona.edu>
Source record: 82684

My IC-735 with 500 Hz filter is now 8 years old. If I sold it,
I'd still be paying $1000 additional for a new "updated" rig,
such as an FT-920. The question is: would I get $1000
improvement in the receiver, at least?

My antenna is omnidirectional, so I am, with the IC-735, at the mercy
of adjacent (SSB) signals (wishing them to be weak!), and for
the noise blanker to effectively take out local garbage
without introducing noise pumped in from adjacent signals
(inherent in ICOMs?).

Is replacing this IC-735 for $1000 out-of-pocket a dumb idea?

Howard Lester N7SO

Source record: 82687
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur,rec.radio.amateur.equipment

Erik,
Your right, 400 feet would be a bit long for a feed-
line, and the metal roof would be a problem for an
'attic' antenna. What are the chances of mounting a
'push-up' pole at one end of your house? A pole would
give you a place to 'hang' an antenna, and opens up a
few possibilities. An antenna 'over' a metal roof isn't
as difficult to do as one 'under' one.
Or, a metal roof makes a 'nice' groundplane for a
vertical antenna.....

400 feet is rather unreasonable for a feedline run. However, is it possible to run a rope or line from the tree or other nearby support structure to make up the difference in the length of the dipole?? Your only other alternative would be to fasten one end of the dipole on a point of your house and erect a pole or a tower to support the other end.

That's where the red flags go up for me - you have to CALL for pricing....
Just can't help but think that if it lived up to the hype, it would be
marketed by Sears and Sawbuck or one of the auto parts distributers. Oh
well! Accepting the premise that pulse charging reduces sulfating, I might
play around with my charger to generate a 14v square wave. Determining any
effect without using a proper control - and hacking both batteries apart to
measure the deposits - will be impossible, but maybe I can add to the
anecdotes and stories! Any ideas on what frequency for the square-wave
pulse?

Erik, yes, it would pretty much defeat the purpose. Take advantage of that metal roof. Run your dipole external from each end of your house using as high of poles as are feasible. Or locate a vertical with its base in the middle of that metal roof.

Howard,

I replaced my IC735 at about the same age that yours is. For me, everything else I tried was a step down - trust me, that 735 does alot of things that the new ones don't. You won't know what you've given away until your up the creek without a paddle. ;-) I found another later IC735, that's my primary right now.

73,
de WB8YQJ/6

> Thanks, Greg Z.
>
> I recomend you start by determaning wether the problem is in a device
like a PIR or in the control panel. Once you have narrowed it down you
can attack the cause. Older RF sensetive devices can be replaced with
newer more robust devices.
I once had a new fire alarm where the Smokes were picking up RF from
cop radios, we took one back to the office and stared injecting VHF
from a sig-gen to fool it. When we determaned the section of the smoke
that was the culprit we added a capacitor from there to ground and that
fixed the problem.

Leather cases for Uniden scanners. Fit models BC235XLT, BC245XLT, SportCat, and Radio Shack Pro-90. These are made from heavy leather like police and fire department radio cases, not the thin glove leather. These have detachable swivel belt loops like the two way radio types. These are new, not used. I ordered a bunch for a show and have these left over. I have a total of 18 but E-Bay will not allow me to do a Dutch Auction! I can e-mail pictures at your request. Contact me at dat2comm@juno.com for more information.

Erik, you are close to an elegant solution to your problem.

Put a screwdriver on your vehicle and park it out in the clear away from the house. Run coax and two motor control wires into the house and rig. Disconnect from the vehicle when you move it. I suspect that given your other restrictions this would work as well or better than some other ideas and would afford you the comfort of operating in the house, etc.

The President Adams is built on the Uniden Chassis and is a great Radio
almost a classic - It could be your microphone amplifier the gain of which is
contolled by the Mic gain pot. The pot itself could be crook or the mic
amplifier itself I would certainly eliminate this first. Its a bit hard to
assume that becuase it works on AM that nothing is wrong with the mic amp or
pot. From memory AM has a preset pot as modulation is fixed in the Uniden ad
should no be adjusted. -

Have you tried giving the rig a bit more audio power though an external
amplified microphone - this may not work if the mic amp is shot - however it
will work if the pot is shot.

You could try bypassing the mic amp and pot altogether with an amplified
mic -

With the ALC trimmer cap out of circuit or wond to nothing you should be
getting full power (and overmodulated)

Try to eliminate the micamp and its gain control

I don't think there is very much wrong with yout rig - its a great chassis

Regards

Source record: 82590

I'm sure there's been discussions of how these two radios compare, but I can't seem to find it. I'm in the market for a new radio and have narrowed the field down to one of the above radios. I'll have the unit for several years, and understandably, want the best bang for the buck.

I'm strictly a CW person (don't use SSB at all) and only chase DX - so my next radio must have an excellent receiver & top notch filtering for QRM. Any DX chasers out there know what I'm talking about...

If you have actually used both radios, please let me hear from you.

Thanks,

John

2067. Help Collins 548U-10 Linear Amp Info Pse

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-30 00:00:00 UTC
From: peter spurr <g3yyn@gofree.co.uk>
Message-ID: <38e35e57@eeyore.callnetuk.com>
Source record: 82591
Cross-posted to: rec.radio.amateur.equipment,sci.electronics.equipment,uk.radio.amateur

Thanks in advance for taking the time to read this.
I have just acquired three Collins HF 2-30MHz Linears, with the intention of firing one up on the amateur bands.
All are marked Model 548U-10 and form part of the Collins HF121, ARC153, 157, 191 and 207 systems. Although the model numbers are all marked as 548U-10, two are described as "Amplifier Linear HF, P No. 622 3870 - 001", whilst the third is described as "Amplifier Radio Frequency, P No. 622 -3870 -004". Case colours are light buff/(lemon?)

Identification Pictures in my Photopoint Album at:

http://albums.photopoint.com/j/AlbumIndex?u=290634&a=3479123

Does anybody have any manuals, circuit information/descriptions or operational info, particularly regarding the control and power interface connectors, or a pointer to who/where this info can be found? Also if anybody has run one up on the bands I would very much like to hear about it.

I figure the psu is internal and definitely aircraft 110 V 400Hz and somewhere around the 3kVA size for the 1kW pep this unit is capable of producing. An outboard 240V 50Hz PSU looks like the best approach unless anybody knows otherwise. Anybody had success producing this amount of 400Hz power using static ac/ac convertors?. Not my favourite starting point!
Thanks in advance for any information and help received.

Regards

Peter G3YYN

> my recently deceased Eimac in my AL-80B.

I got the following info off of the RF Parts web site.

COMPARISON OF 3-400Z
and 3-500Z TUBES

EIMAC 3-400Z The Original grounded grid triode introduced in the early 1960s. Now obsolete part number. Power dissipation: 400w.

EIMAC 3-500Z Later version of 3-400Z having larger fins for the increased power dissipation of 500w. Slightly larger body requires minor changes to fit where 3-400s were used. Requires heat dissipating connector.

3-500ZG Graphite anode version of 3-500Z. Anode dissipation approximately 600w (additional air flow may be required). Graphite anode provides a more rugged tube. Produced by Eimac, Amperex (3-500Z/8802), RF PARTS, Taylor, Triton, etc.

3-500C Generic Chinese Graphite tube.

3-600Z Proposed Russia tube. Only prototypes were produced. Call for information.

COMPARISON OF 3-500Z MANUFACTURERS

EIMAC Eimac was the original designer of 3-500Z line, and is generally considered the "standard" for comparison. Eimac no longer produces 3-500Z or other glass tubes.

AMPEREX An excellent graphite anode tube made of quality equal to Eimac 3-500ZG. Late production made in France and marked 3-500Z/8802. These Amperex tubes require about 10-20% more RF drive than Eimac or RF Parts tubes for the same power output. 90 day Limited Warranty from RF Parts.

RF PARTS "RFP" line is a quality graphite anode tube, and a copy of the Eimac 3-500ZG. Probably represents the best value for the price. All tubes receive 100% RF Parts' testing. 2 year Limited Warranty. Made in China.

TAYLOR RF Parts' 3-500ZG. A good tube at a very competitive price. 100% RF Parts' testing. 1 year Limited Warranty. Made in China.

PENTA, JOLIDA, STAR, PRIDE, etc. Chinese import tube, quality and warranty (if any) varies with brand and dealer.

Source record: 82593

Thank you all for your comments! I'll keep the rig. It's clean and works well. I may try out an outboard DSP for increased selectivity and noise and heterodyne reduction.

Erik, although the MFJ Hi-Q Loop for 10-30m is a bit pricey, it
works surprisingly well. That's another option for you. I have
mine mounted vertically, in my modest size yard, on a 5' mast,
and it makes for an interesting "yard sculpture". :)

Howard,

As a P.S., the TS850Sat was one of the few radios I tried that
was indeed as good as the IC735 in pure transceiver performance.
If you don't miss the analog S meter, fingerhole on the main
tuning knob, smart tuning rate, and can find a place that you
trust to service it, the 850 is one of the few real
alternatives. I also like the FT890AT and IC751a.

73,
de WB8YQJ/6

>My IC-735 with 500 Hz filter is now 8 years old. If I sold it,
>I'd still be paying $1000 additional for a new "updated" rig,
>such as an FT-920. The question is: would I get $1000
>improvement in the receiver, at least?

No. The IC735 is still comparable to new transceivers with
street prices on the order of $1,600. So you won't notice any
significant improvements, and you may find some things that
don't work as well.

>My antenna is omnidirectional, so I am, with the IC-735, at the mercy
>of adjacent (SSB) signals (wishing them to be weak!), and for
>the noise blanker to effectively take out local garbage
>without introducing noise pumped in from adjacent signals
>(inherent in ICOMs?).

No, it's inherent in any receiver with a SSB width IF filter. A bit of
improvement can be had by replacing the stock filters with filters
that have a better shape factor (INRAD, etc), but unless you pay
the money for a radio with IF DSP *inside* the AGC loop, you won't
get much improvement over what the IC735 offers.

>Is replacing this IC-735 for $1000 out-of-pocket a dumb idea?

Yes. To see significant improvement, you'll need to go to top of
the line new equipment. The IC735 is still an *excellent* HF radio.
There are new radios with more features, but only a few new radios
with better basic performance, and they all cost significantly more
than $1,600.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=295948418

There are five pictures on the auction page, it's always nice to see what you're buying :).

15 power resistors. Used and functional except two perhaps. Details are as follows:

Ohmite Vitreous Enamel Wirewound Resistors
2- 2 ohm, 100w, 270-100m-40, #0600d x-13
1- 10ohm, 50w, 270-50k-40, #0400b x-36
1- 25ohm, 50w, Dividohm adjustable, #0562
1- 50ohm, 50w, 270-50k-40, #0400d x-49. This one is cracked in half, though the wire itself is not broken. If used in a stationary position, it should be fine. It still holds 50ohms on the meter.
1- 100ohm, 100w, 270-100m-40, #0604 x-14
1- 500ohm, 50w, 270-50k-40, #0402 x-52
1- 5Kohm, 225w, 270-225p-46, #0914 y-11
1- 10Kohm, 225w, 270-225p-46, #0916 x-50

IRC
1- 2.5Megohm, 100w, MVO, W7347

RPC, Resistor Products Corp.
2- 250Megohm 1%, 50w, HP-8, #7120. One of these is bent(!) inside it's clear poly case. I don't have a meter to test this high so I couldn't check to see that it conducts.

Victoreen
1- 10Megohm 1%, 100w, MOX-J
1 38Megohm 1%, 100w, MOX-G

Dale (Now Vishay)
1- 350ohm 1%, 100w, RH10000D350R0F 6651. This is the gold anodized aluminum case resistor. Has two mounting lugs for mounting to a heatsink or chassis.
Thank you,
Steve Fox

>What's the best bang for the buck today. I got 7 years use out of
>my recently deceased Eimac in my AL-80B.

By all accounts, the Russian tubes are fully as good as the Eimacs.
The Chinese tubes aren't as good (inconsistent quality control).
RF Parts will sell you tested tubes, ie they do the QC the Chinese
didn't, for a price premium that still puts the Chinese tube cost under
that of the Russian tubes. But that doesn't include a life test for
obvious reasons.

Personally, I'd still go with the Russian tubes. They're a known quantity
with a good track record. If you want to save a few bucks, you might give
the RF Parts tested Chinese tubes a try. But I wouldn't touch the untested
Chinese tubes. That would be a real crapshoot.

Used. Pulled from a working Apollo ruby laser power supply and tested, works fine. Here are some facts about ignitrons: The ignitron is mercury vapor rectifier in which an arc is switched between a (usually graphite) anode and a mercury pool cathode. The discharge is initiated by an ignitor electrode which dips into the mercury pool cathode. On application of a suitable impulse current/voltage to this ignitor an electron emitting source is formed at the point at which the ignitor contacts the pool. This initiates the arcing between the anode and cathode. It is important that the ignitor should be triggered correctly. The ignitor requires a certain energy for successful ignition and also an 'ignitor characteristic' application of this energy in terms of current and voltage with respect to time. Misfiring or ignitor damage will otherwise occur. It is also vital that no significant negative voltage should appear at the ignitor with respect to the cathode else ignitor destruction will be the inevitable result. There are two main ways by which the trigger can be biased: Anode excitation: common in resistance welding applications here the anode bias is connected to the ignitor by means of a switch (thyristor, thyratron etc.) and a resistor/fuse network. The ignitor current drops rapidly on ignition as the anode-cathode voltage drops very low during conduction. Separate excitation: as the name suggests, here the ignitor circuit is largely independent of the main circuit. Ignitrons are often used in parallel for AC power control applications. Ignitrons must often be cooled when used continuously (ie. Not single shot as in capacitor discharge) Water cooling is commonly employed. It is vital that Ignitrons must be used in the correct temperature range to hot or to cold can be very bad news for these devices- (cold leads to mercury vapor condensing on the anode.) Ignitrons are very limited with regards their physical orientation. This reason being simple that they rely upon a pool of liquid at one end of the device that must be correctly positioned for the ignitor to function correctly. Positioning the device so that it leans over at an angle of more than 2 or 3 degrees from the vertical is fatal. Most ignitrons operate at most currents between 5 Amps and

100kA and may be suitable for voltages from a couple of hundred
to 20 000 Volts. Thyratrons and Krytrons are
sometimes used in ignitron triggering circuits along with the
familiar thyristor. Ignitrons are suited to applications
were power control of high voltages or currents is required.
Welding is probably the most common application.
Shipping is $5.00US.
Thank you,
Steve Fox

Ten Tec does not have dual receive. I WILL NEVER have another radio without dual receive. Once you have used it, you will never be without it. The only way for a DXer to go. By the way, I have two (2) FT-1000MPs. One with all filters added is awesome. The other with just the extra CW filters added is my backup rig.

John,

I received email from a russian who performed a contest-style torture test on the 756Pro receiver. He said it did not fare too well. So the 1000MP gets my vote. You might also want to consider the Omni VI+ which is a highly regarded CW rig with an excellent receiver.

I use a modified IC-765 - not as fancy as the newer rigs, but still a good CW rig with excellent dynamic range. it lacks the internal DSP of the newer rigs but I've been able to live without it. One of these days I may add an outboard DSP.

Also, I have not tried the newer Kenwood 950 series - apparently they are improved over the early ones.

Hope this helps,

Steve

I have a brand new TM-261a for sale. The proof of purchase is dated late 1/2000. Price is $165.00(incl/shipping) and is firm. All I'm asking is exactly what I paid for it, nothing more or less.
Unit is in total working order and includes the box/bracket/users guide....ect ect.
Money Order/Postal Money Order or Personal Checks ok. Personal check will clear before shipping. Will ship via USPS or UPS and will provide tracking number once unit is on its way.

I can be reached via email at kb2ehj@intrex.net

I have for sale a Icom W2A dual bander (2m/70cm). Unit is in 100% working order. Case is kinda ugly but not broken. Unit includes 8 month old battery, speaker microphone(ICOM brand), cig. adapter, antenna (not orginal however), wall wart charger. Unit has 40 memories on each side and will cross band repeat between the two sides. I'm asking $225.00 (includes shipping). I will acept Postal M/O's, Bank M/O's and personal checks. P/C's will have to clear before shipping. I will ship via USPS or UPS and will provide tracking number once unit is on the way.
Please no trades.

IC 2SRA 2m HT w/scanner. Unit rec/xmit on 2meter band and on the
'other side' receives from 25Mhz to 950Mhz cont. (includes cell band).
Case is in very good condition. I will include the following items
with unit: Wall charger, cig. adapter charger, good battery (1.5w
out), Master2 charger with good 12v (5w out) battery, both antenna's,
users guide. Asking $275.00(includes shipping). I will acept Postal
M/O's, Bank M/O's and personal checks. P/C will have to clear before
unit is shipped. Tracking number will be provided when unit ships.
Will ship USPS or UPS.
Please no trades.

2097. FS: Custom built ATA & Carpeted Equipment Cases

Are you looking for cases for your gear? If you are, I can get ATA & carpeted equipment cases custom built to your specifications. Carpeted cases carry a one year warranty while ATA carries a 3 year warranty. I am able to accept Visa & Mastercard through PayPal.com as well. If you would like more information, please contact me at shaddai@nidlink.com, or feel free to call me at 208-964-6110. I look forward to hearing from you.

2098. RF Shielding

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-30 00:00:00 UTC
From: "Phillip B. Pacier" <ke6guq@arrl.net>
Message-ID: <38E3F63A.B58DBC59@arrl.net>
Source record: 82622
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have two questions, but they are similar problems so I'll ask them both here. First, I am having a big problem with RF feedback from my HF setup into my computer and vice versa. One strike is that the antenna is a dipole in the attic not too far above my head. The culprit seems to be the keyboard. When I type, I can hear clicks on the tranceiver. And when I xmit, the computer starts going crazy as it responds to various keystrokes being induced by RF. Any suggestions? Also, I am running 10 meters mobile with a Rat Shack HTX-10 and either a wilson 1000 or a 102" whip. When a trucker comes up and keys down on CB, it burries my entire 10 meter band (gotta be more than 4 watts these guys are using). Any remedies for that? Thanks for your help. Happy Hamming.

Unless I've mixed up my numbers here, the sx-28 in bad shape is worth a couple hun. The DX-100 in best of shape about $40. The dx-28, I've not heard of.

Detroit has made it obvious none of their mechanical engineers are Ham operators. And my just-purchased '98 Explorer is a prime example.

Any tips out there for:

1. Running power wiring for my dual-bander mobile.

2. Antenna mount and cable run/path thru the vehicle.

3. Mounting options in addition to using a radio with a remote head option.

Thnx --

2114. Re: What's WRONG with ham radio...?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-31 00:00:00 UTC
From: Will <catroach@mindspring.com>
Message-ID: <38E4EAB4.78AB6339@mindspring.com>
Source record: 82457
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.policy

To echo several of the other posts on this thread, what is wrong with ham radio most of all is the very perception and statement that anything is wrong with it at all. Since the ARRL brought out those QST CD-ROMS, I have had the opportunity to read widely issues back to the late 20's. Apropos this thread, I have two observations. First, the Chicken Littles forecasting the demise of ham radio have been with us a long time, virtually since the beginning of licensing. Interestingly, the predictions, and the objections, are the same essentailly then as now. Secondly, more amusing, is the use of the phrase "today's crowded bands" in ads for ham gear. As far back as the mid-30's, I see instances of manufacturers using this term to sell receivers equipped with crystal filters, just as they use the term now to sell DSP boxes. It is all a bunch of hysteria, and history amply shows that nothing dire is likely to come of anything, however midguided, wrong-headed, orplain dumb the changes may be.

I have a brand new SUNAIR GSB-900 HF Military/Commercial HF Tranceiver.
It was stored in the original safety pack since 1982. This is a 100W
continuous rig that is nearly bombproof. It comes with the mic, manual
and all the cables for connecting it to the remote head. Also all cables
for 12V 120V and 230V operations. A few extra spares, like fuses and
connectors. Modes USB,LSB,AME and CW. Covers 1.6-30MHz. Weight is 62 lbs
The remote head is the digital GRC-955. All finished in light flat
military gray. This is unit sold for over $12K as the RT1227/URC92.
I have jpgs for those interested. For more info contact me direct.
This is one serious radio. $2500

Known problem. Known solutions include adding a few feet oof coax or better grounding. I use a few ferrite beads in the coax and the problem goes away. The problem could be do to insufficience grounding of the coax at the antenna connection. Then the cable inside radiates and becomes part of the antenna.

Peter:

An exceptionally excellent point to add to this discussion. At least digital transmission
modes can have their signatures recorded in some kind of ever expanding archive

of manmade UHF + signal /RFI sources...

Eric/VE3RUE.

2127. RADIOEXPEDITION on ALTAI

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-31 00:00:00 UTC
From: altai-es <altai-es@ukg.kz>
Message-ID: <8c1etu$m0i$5@mail.nursat.net>
Source record: 82497

What you think of idea of realization of radioexpedition on Southern Altai?

Southern Altai - highland is on the board of Kazakhstan, Russia, China and Mongoly.
Land of lakes and waterfalls, mountain taiga and stormy rivers, deserts and snowy peaks...
In time of Soviet Union this territory had been absolutelly inaccessible for foreign tourists (and furthermore for radioexpedition) - in locale
It is not enough of ham stations.

The base camp of expedition is planned to place in region by highest Fastigiums of Siberia and Altai of a mountain Belooha, lake Markakol and Zaisan.

If you were interested by our proposal, we can be found on ranges 21Mhz, 28Mhz call sign UN8JZZ (collective radio station)

WELL - if under warranty, let Icom fix it!

Otherwise, *I* would try to bridge the failed trace with material as
much larger as reasonably possible to permit greater power carrying
ability...

Hello! We are thinking of getting the Outback Outreach 500 antenna to use as we live in an apartment and have limited roof space. We would be mounting the antenna on one of the vent pipes that are up on the roof. Has anyone used this antenna in this way? If so, how is it's preformance? Please email me back at: N9YLN@aol.com with any info. Thanks in advance!

Some multi-band ideas:
An end fed long wire (400 ft to the tree) and work it against the metal
roof as a ground? It should send an outrageous signal off the end.
String a LONG dipole to the tree and center feed it with ladderline?
150+ ft / leg would make a nice radiator. I know of an installation
with a similar setup with 300 ft legs on a ladderline fed dipole....
gets out very well!! I do not think the long ladderline from the shack
to the center would hurt at all! Just keep it off the ground.
One more... end feed the 400 foot span with ladder line (think it is
called and end fed zep???) One side of the feed to the 400 ft wire the
other remains open.
Of course all of these would require a tuner of some sort... easily
homebrewed.

2156. electricity cost in running computer?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-31 00:00:00 UTC
From: k7jy@aol.com
Message-ID: <20000331100303.00312.00000260@ng-fh1.aol.com>
Source record: 82526

Anyone out there have any idea approximately how much it costs in electricity to run a common pc home computer for a 24 hour period? Also, how about the cost of running a standard monitor for the same period? I've heard figures anywhere from 10 cents to a dollar per day for electricity costs here in the Pacific NW. Somehow I can't believe the dollar figure, but I'm curious if anyone has calculated these costs for their city (in the USA). Tnx and 73, de John, K7JY, Seattle.

John:

I just got my 756 Pro and this is what I hear on CW mode.

On the plus side the adjustable filter widths are excellent. The filter skirts are so sharp you got to hear it to believe it. The Pro has a manual IF 70 db notch filter that works on CW - outstanding. All other CW functions work as advertised. You have 3 custom filter widths you can setup in CW mode, a continues option range of 50 Hz to 1.2 kHz. Even at 50 Hz the filter does not ring.

On the minus side the received CW tone has got a slight hollow sound to it, like DSP noise reduction has been turned on yet the NR is not on in the radio. Also, on strong CW signals there is a slight (you have to be looking for this) popping sound to the character. Switching the AGC to MID or reducing RF gain reduces or eliminates this popping effect. This is very minor in my opinion but if you are a perfectionist you might hate it.

I have seen the Pro specs from Europe and they do not look good. All I can say it could have fooled me. What has not been mentioned is that the Auto Tuner in the Pro is in-line during receive and provides an additional 35 db out of band signal rejection.

I really like the radio, it is a vast improvement over version 1 of the 756 which I had for 3 years. With the right microphone and audio settings the transmit audio is excellent if you should decide to deviate from CW on occasion. This CW issue I mentioned above is the only fault I have found with the Pro.

The CW pros in this area love the Omni VI+, they liked the Omni over the 1000MP for CW.

Good luck, have fun.

>Hamming.
>

If possible, get a keyboard made by Maxi-Switch. I have tried two
different models and they are absolutely rf-proof. I ran them about
50 feet directly under a beam running 1500 watts and never a glitch.
All other keyboards I tried (about 4-5, don't remember) were just
trashed by the rf.

If that's not possible, try putting the clamp-on type ferrites on the
keyboard cable, and if you have a spiral cord from the keyboard, put a
ferrite rod in the middle. Both of these will help, and if you're
only running 100 watts, I'd think they would be sufficient. GL

Well looking at my electric bill , the first 434 KWH (KilloWatt Hours)
are 6.1645 cents a KWH (say 6.2 cents a KWH) .... being generous say
your computer uses 150 watts that's (150/1000) X (6.2 cents a KWH) X
(24 hours) = 22.3 cents per 24 hours. Your monitor uses perhaps
another 100 - 150 watts so the cost would be about double that. Also
the 6.2 cents per KWH from my utility company (in Mich) was for the
first 434 KWH, after that the cost was 13.8 cents per KWH so you can
plug that cost figure in also (a little over double the other rate)

I've always run power cable thru the passenger area, under the rug
next to the doorsills, and used a Greenlee hole punch to go thru the
firewall in a clear spot, lining the hole with a rubber grommet.
I've successfully installed 4/10 rubber covered cable in this manner.
Install your circuit protect scheme (fuse or circuitbreaker) underhood.
Just don't use the car frame for the ground return or you could have
some intriguing noise and ground loop problems.

2169. FS: Astron Power Supply transformers

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-31 00:00:00 UTC
From: Victor <ke4qjk@qsl.net>
Message-ID: <F69F4.5016$tk.93119@news3.mia>
Source record: 82539
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.swap

For sale:
Astron power supply transformers
(1) from an Astron RS-20M
(1) from an Astron RS-35M

I replaced the standard 110v transformers in two Astron power supplies with switchable 110-220v transformers. The transformers which were replaced are now available. They are in perfect operating order, run quietly (these are not hummers!)

RS-20 transformer: 110v ac primary, 34v (no load) ac secondary with center-tap. This transformer is capable of a continuous 16A cont. 20A intermittent current draw. There is a also another secondary winding, 44v ac but I don't know how much amperage draw is capable from it. $18

RS-35 transformer: 110v ac primary, 34v (no load) ac secondary with center-tap. This transformer is capable of 25A cont., 35A intermittent current draw. There is a also another secondary winding, 44v ac but I don't know how much amperage draw is capable from it. $25

Either (or both) would make a perfect replacement for your existing supply, a great addition for the hobbyist or 'built it yourselfer'!

Buyer would pay shipping from S. FL 33478

Remove the top and bottom covers.

Look at the vertical p.c. board behind the front of the radio. There will be
2 small chip resistors on the left side of the board.

Carefully remove the one with the number 0. It will be the one closest to
the left near the grounding spring. You will probably have to scrape it off
with a pair of needle nose pliers.

After you remove it the VFO ranges should be:
VHF TX 136.995 - 173.995. RX should be 118-174.
UHF TX should be 410-469.995 RX should be 300-470.

2178. Re: RF Shielding

Newsgroup: rec.radio.amateur.equipment
Date: 2000-03-31 00:00:00 UTC
From: Richard Ferguson <raferguson@worldnet.att.net>
Message-ID: <38E411B9.6778FCDF@worldnet.att.net>
Source record: 82629

Neither problem is trivial. CB and 10 meters are so close in frequency
that you probably cannot filter it out externally. A more sophisticated
receiver than a Radio Shack would probably experience fewer problems
with strong signals a few hundred kilohertz away, I think that the third
order intercept numbers are the most relevant receiver spec for that problem.

Computer interference is solvable, but with lots of effort. You should
probably buy some split ferrites for starters. Try unplugging the
monitor and keyboard and see how much the interference changes. The
antenna that close to the computer may make the problem insoluble,
however. One odd idea would be to put metal (maybe chicken wire on the
floor of the attic, and put the antenna above the ground plane. The
ground plane might reduce radiation between the antenna and the
computer, although it might or might not help your antenna radiation
pattern to the rest of the universe. I would think hard about finding
another antenna location, and then tackle the residual interference with
more separation.

Good luck.

I would be most appreciative if someone could help identify the make/model of this HF amplifier -- locate at http://www.home.earthlink.net/~cvanderk/HF_amp.jpg My father owned this amplifier during the late 70s/early 80s. Unfortunately, the amplifier has long been sold but if anyone may be able to provide information and/or has, or knows of one available for purchase please e-mail me at cvanderk@earthlink.net

Thank you in advance,

Chris, N4JOY

I have 5 of these - EG&G KN-6.

2 New In Box, 3 removed from new equipment.

These were used to trigger an arc lamp in a YAG laser system, but also found use in firing explosives in nukes, due to their precise timing characteristics.

The use a tiny bit of a radioactive nickel isotope to stabilize and lower the trigger voltage.

Any offers?

They make really cool conversation pieces, souveniers of the cold war era.

And no, I will not even think of considering shipping these things overseas! They are on the export control list!

Source record: 82641

Hi Peter
Maybe you have the problem fixed by now, but the same situation has arisen
from time to time with my TR9000. Unfortunately, my rig has the VCO board
out right now as the RX/TX phase noise and freq drift became unbearable
with time. I am still looking for a bunch of tantalum capacitors to fix it.

My radio has been modified to channel scan so the 146-148 thing may
not be the same problem. On mine it would do that if I turned the rig off
with the Mode Switch in FM2 position, and when repowered it would
only tune 146-148 all modes. Try turning your rig off in FM1 mode,
and repower it in USB mode with VFO -A selected. .... I THINK thats
how I would get out of the glitch. Sorry I can't really verify the
sequence exactly as I havn't run this radio for over a year.......
If all else fails and dropping out the memory backup 12v
source for a CPU reset dosn't work.............
let me know by email.....ve3rue@air.on.ca ....I am
on the lookout for another of these for parts.....73 and
Cheers from EN58

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

For sale:
Astron power supply transformers
(1) from an Astron RS-20M
(1) from an Astron RS-35M

I replaced the standard 110v transformers in two Astron power supplies with switchable 110-220v transformers. The transformers which were replaced are now available. They are in perfect operating order, run quietly (these are not hummers!)

RS-20 transformer: 110v ac primary, 34v (no load) ac secondary with center-tap. This transformer is capable of a continuous 16A cont. 20A intermittent current draw. There is a also another secondary winding, 44v ac but I don't know how much amperage draw is capable from it. $18

RS-35 transformer: 110v ac primary, 34v (no load) ac secondary with center-tap. This transformer is capable of 25A cont., 35A intermittent current draw. There is a also another secondary winding, 44v ac but I don't know how much amperage draw is capable from it. $25

Either (or both) would make a perfect replacement for an existing supply, a great addition for the hobbyist or 'do it yourselfer'!

Buyer would pay shipping from S. FL 33478

2220. Ten-Tec gear for Sale

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-01 00:00:00 UTC
From: randas@mindspring.com
Message-ID: <8c6cokfgo1@slb6.atl.mindspring.net>
Source record: 82421

I have for sale the following equipment. All in fine working order, and can be heard on the air. Would prefer to have local pickup (near Louisville,KY) but will ship in factory boxes if needed.

Omni-VI plus (factory upgraded to option 3)
All filter slots full Standard 2.4kc filter
#288..1.8kc SSB filter 6.3 IF
#285..500hz CW filter 6.3 IF
#282..250hz CW filter 6.3 IF
#218..1.8kc SSB filter 9mhz IF
#217..500hz CW filter 9mhz IF

Radio is in near mint condition..I'd say a 9.85 on the 10 scale. (10 being "perfect")

Included with the radio is a near mint 961 power supply/speaker , all power cables, manuals, and factory boxes.

Price for Omni-VI plus and power supply... $2,150 and some help on shipping if needed.

Also have a Hercules II model 420. Full output and the QSK stays right with the Omni-VI plus. Has some paint missing where previous owner had some stickers. (on the top panel) but Ten-Tec has replacement panels at a very reasonable cost. (under 20 bucks) Amp comes with the model 9423 remote control box and its cables . Nice if you want to go mobile.

Astron VS75m power supply. Separate meters for Voltage and Amps. I used this supply with the HerculesII with no problems. This is a "mint" supply and is a little over a year old.

I have all connecting power cables including the cable to allow the Omni-VI (and other rigs) to have auto band switching. All manuals, and factory boxes.

Price for amp, remote, and power supply..$1000 plus help on shipping.

Have a "mint" 238 tuner..includes the factory supplied 1000pf 500V capacitor for added help on 160m if needed. Have manual and factory boxes.
Price for tuner is ..$300 plus help on shipping. (The buyer of the Omni-VI will have first chance at this tuner)

Model 1208 20m to 6m transverter. This is a factory assembled unit that works just fine. I've made many contacts with this unit and a dipole, it doesn't take much when the band is open.
Price for the transverter is $95 shipped 48.

I have more TT gear to sell but will start with this group.
I will entertain offers...but please make them reasonable.

de Tim K0FL

HI,
Broke my Yaesu MH-27 DTMF mic for my 5100.
Anyone know where I might be able to locate another?
I think the FT-2200 and the FT-7400 use the same mic, any help would be appreciated!!

Thanks
Gary

Well, first, apologies for sending it to the antenna newsgroup as I meant to send it to equipment instead... followups have been fixed.

Let me clarify my position, since you probably have not been following this issue through the years as many others of us were:

Variations of this law keep coming up every year and keep getting rejected. I belive the rejection is legit because the proposed bill treats a symptom, not a disease... asprin for a broken leg.

The disease is simple: cellular *radio* calls can be overheard by anyone with the knowledge to do so. The cure is also simple: end-to-end encryption of the call with the encryption key being chosen when the phone is activated and saved along with the rest of your account info. Encryption, not scrambling, not voice inversion... these are technical terms with specific meaning. Anything short of encryption is "security by obscurity" and solves nothing.

As for how the CTIA treats scannists, they've had an undeclared war against them. Every year, as mentioned above, they've attempted to jam legislation through to a) eliminate ALL access to public service bands, b) pot the IFs of ALL radio gear above 30 MHz, and c) "invert" the Communications Act of 1934 by requiring the law to state explicitly which frequencies can be listened to. In other words, everything is off-limits except what is stated in the law.

Now, in each of these congressional sessions, all scanner users have been universally called "electronic stalkers" with no distinction being made between neighborhood watch groups, public service watch groups, nosy neighbors, and professional theives.

Furthermore, when the Gingrich "accidental" taping occurred -- an act that broke at least two laws, the original Communications Act of 1934 and the ECPA of 1994 -- a phony "demonstration" was made to show how easy it was to monitor phone calls, and a radio dealer who caters to scannists and SWLs was filleted alive in front of a committee. It was an eye-opening sight for me and one of the reasons why I got involved.

So, yes, I have no love for the CTIA or their members.

Make no mistake: I don't, won't, nor will endorse monitoring of cell calls. I think they should be made private. Through encryption. Anyone who tells you that the phones don't have the horsepower to do it or that the individual AMPS/TDMA/CDMA boards at the cell site don't have the horsepower to do this is full of shit. CTIA is just finding it easier to buy congress than to put an additional $0.25 worth of components into each phone they sell and an addtional $100 or so of extra cost at tower infrastructure. (And that infrastructure is continually being updated... my old TDMA phone with voice inversion no longer can find any cells that support it; what little privacy structure that was available is being retired.)

As a ham, SWL and scannist, I don't like the idea of radio being
reduced to "voodo black boxes" by law. You know and I know that
anyone with a little time can get at cell calls today by using
cell phone diagnostic modes, images from receivers, UHF tuners
and so on. Cordless phones are even easier.

I want my phone calls to be private. So, let's encrypt and fix
the problem!

> That's my opinion; doubtless there are others.

That's mine!

Source record: 82475

Hello,

I'm not familiar with that particular model, but Benmar has been active in the Marine Electronics market for many years. I know them most from the autopilot devices for boats they manufacture and they may likely have made a Loran receiver as you describe.

Loran (current "C" generation) is a radio/timing pulse navigation system that utilizes three or more transmitter sites for a given coverage area. The Loran receiver compares the Time Delays of signals from two of the stations compared to a master station to determine a calculated position based on the intersection of the two hyperbolic TD lines.

Although I've used Loran on my own boat for more than 15 years, the most popular navigation tool today is GPS. The shutdown of the US Government sponsered Loran C System has been extended and may now be with us for another 4 or 5 years.

I still use my Loran C and like it very much, but on the used market, there is little value for used Loran receivers these days, although with the proper manual or documentation it may be worth $100 or a little more to a boater on a budget.

You might check with Skipper Marine Electronics at 1-800-SKIPPER and find out what vintage your radio is. Skipper is a dealer for Benmar.

Regards,
Brian

2233. Re: electricity cost in running computer?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-04-01 00:00:00 UTC
From: Peter Gottlieb <peter@NewYorkNERD.com>
Message-ID: <wtfF4.1754$xv.138268@typhoon2.gnilink.net>
Source record: 82477

You lucky dog.

Here in Westchester, New York, with taxes, fees, and surcharges it comes to almost exactly 16 cents/kWh.

My system draws about 80 "real" Watts (over 100 VA), but the big old monitor pulls about 220 W.

So, over a 24 hour period, the computer alone costs me about 31 cents and the monitor about 85 cents. Combined, that's over a dollar a day if I left them both on.

The HVAC humidifier pulls 2 KW and runs solid on the very cold, dry, days. That's $7.68 a day, but we need it due to health reasons. Anybody else pay these rates?

Hello,

a fellow Ham is in need of the Mic pin out -- which pin is for what function? He'd like to connect a mic, as well as a TNC, and does not have this information.

If you have the mic pin-out information, and perhaps TNC connection information, would you please email this to me? (Change the email address by removing the right part). I'll forward this info to him (N7ZJJ). We appreciate any help you might be able to offer.

(remember to change my email address when replying direct)

the ft-one is a fabulous radio! unfortunately, ups destroyed
mine... :(i don't know if it is salvegable or not... if not,
i will be parting it out, mine had ALL options, ram backup,
fm, all filters, etc...

mitch, w4oa

2244. FS: Motorola 2-Way Trunked Radio System "Maxtrac 800" (410) Baltimore, Maryland, MD area

FS: Motorola 2-Way Trunked Radio System "Maxtrac 800" (410) Baltimore, Maryland, MD area

Dear News Readers,

I am selling my 5 unit, 2 base station Motorola 2-Way Trunked Programmable Radio System "Maxtrac 800". It runs on 800 megahertz frequencies. I will sell the system whole or separately.

I am asking $750 for the system complete. All offers will be considered!

"BEST OFFER" GETS THE RADIOS !

The system specifically consists of:
5 Motorola 2-Way Trunked 800 MHz Mobile Radios "Maxtrac 800" Programmable 15W 1 System / 1 Subfleet ($3,907.50 new)
2 Base Control Stations ($748.00 new)
1 Deskset Base Station Extension ($434.11 new)

The system was used for my towing company, and we have reduced our fleet and have decided to utilize cellular communications. In Baltimore, a company called Nextel has purchased and is converting 75% of the analog 800 megahertz frequencies to digital signal only, reducing the system my radios operate on. The system was running on 20 different channels, and will probably be reduced to about 5 channels which might be pretty crowded in Baltimore, depending on how may radio users switch to digital or cellular.

If you have any suggestions on any places on the internet that I should advertise these radios, I would really appreciate your advise.

FOR TRADE ONLY I'm looking for a Computer or Computer parts.

Yaesu FT 530 Mirage model 216 150 watt HT amp w/ pre-amp.
Relisys Dimera 3500 Digital Camera 680 X
480 pixel

Items needed. 16 or 32 mhz AGP video Card
500 or higher CPU
56k modem
Good sound card
Hard Drives 5 gig or larger IDE
CD Writer 4X or 8 X writing speed

Other newer parts maybe considered.

I have a Yaesu FT 530 Dualband HT 144/440 (extended tx & rx)
800-950 mhz receive. AM receive on VHF. 40 memories per band. Touchtone
and CTCSS encode and decode built in. 3 tx power levels.

This unit is USED, but works fine. (i have pictures)
Included in this package 12 volt FNB-27 battery pack. (will not
charge)
No charger included. Also included 12 volt power Cord, and FT-530
instruction manual.

Mirage Model 216 HT amp with pre-amp.

1 watt in 80 watts out 2 watts in 120 watts out 3 watts in 150
watts out
Unit works great.

RELISYS DIMERA 3500 Digital Camera Less than 5 hours use.
680 x 480 pixel 2 meg flash Card. Software and serial cable
included.
Manual and box.

Thanks
Tom radioguy@mailandnews.com
